2013-14

CHRONOLOGY OF ACADEMIC SCHEDULE AND EVENTS

2012-2013 ACADEMIC YEAR

First Week of January	Tuition for Terms C and D Due
January 6	Residence Halls Open for Term C
January 2-16	Web Check-In for Spring Semester
January 10	First Day of Classes, Term C, and Graduate Courses
January 11	Deadline for Completion of Degree Requirement Forms (E-CDR) for Projects Completed in B-Term
January 21	Martin Luther King Day (No Classes)
January 25	President's IQP Award Competition
February 14	Advising Appointment Day (No Undergraduate Classes)
March 1	Last Day of Classes, Term C (Follow Monday Class Schedule)
March 2-10	Spring Recess
March 11	First Day of Classes, Term D
April 15	Patriots Day (No Classes)
April 18	Project Presentation Day (No Undergraduate Classes)
April 25	Deadline for Completion of Degree Requirement Forms (E-CDR) for May 2013 Candidates
April 26	Last Day of Classes for Graduate Courses
April 30	Last Day of Classes, Term D
May 2	12 noon - Residence Halls Close
May 10	Baccalaureate Ceremony
May 11	Spring Commencement
May 27	Memorial Day Holiday
May 30-June 2	Alumni Reunion
July 4	Independence Day
August 30	Deadline for Completion of Degree Requirement Forms (E-CDR) for Projects Completed in E-Term

2013-2014 ACADEMIC YEAR

Last Week of July	Tuition for Terms A and B Due
August 25	Residence Halls Open for NEW Students; New Student Orientation (Freshmen/Transfer) Begins
August 26	Residence Halls and Apartments Open for Returning Students
August 25-September 5	Web Check-In for Fall Semester
August 29	First Day of Classes, Term A, and Graduate Courses
August 30	Deadline for Completion of Degree Requirement Forms (E-CDR) for Projects Completed in E-Term
September 2	Labor Day Holiday (No Classes)
September 26	President's IQP Awards Entry Deadline
September 28	Homecoming

October 17	Last Day of Classes, Term A
October 18-28	Fall Recess
October 28	Graduate Classes Resume
October 29	First Day of Classes, Term B
October 30	Deadline for Completion of Degree Requirement Forms (E-CDR) for Projects Completed in A-Term
November 8-10	Parents' Weekend
November 27-December 1	Thanksgiving Recess (Last Day of Class - Undergraduates - November 26)
	(Last Day of Class - Graduate Students - November 25)
December 19	Last Day of B-term Classes
December 20	Last Day of Graduate Courses
December 20	12 noon - Residence Halls Close for Term Break
December 20-January 15, 2014	Winter Recess
First Week of January	Tuition for Terms C and D Due
January 12	Residence Halls Open for Term C
January 12-23	Web Check-In for Spring Semester
January 16	First Day of Classes, Term C, and Graduate Courses
January 17	Deadline for Completion of Degree Requirement Forms (E-CDR) for Projects Completed in B-Term
January 20	Martin Luther King Day (No Classes)
January 31	President's IQP Award Competition
February 20	Advising Appointment Day (No Undergraduate Classes)
March 7	Last Day of Classes, Term C (Follow Monday Class Schedule)
March 8-16	Spring Recess
March 17	First Day of Classes, Term D
March 18	Deadline for Completion of Degree Requirement Forms (E-CDR) for Projects Completed in C-Term
April 21	Patriots Day (No Classes)
April 24	Project Presentation Day (No Undergraduate Classes)
May 1	Deadline for Completion of Degree Requirement Forms (E-CDR) for May 2014 Candidates
May 6	Last Day of Classes for Graduate Courses
May 6	Last Day of Classes, Term D
May 8	12 noon - Residence Halls Close
May 16	Baccalaureate Ceremony
May 17	Spring Commencement
May 26	Memorial Day Holiday
May 30-June 2	Alumni Reunion
July 4	Independence Day
August 29	Deadline for Completion of Degree Requirement Forms (E-CDR) for Projects Completed in E-Term

WPI educates talented men and women in engineering, science, management, and humanities in preparation for careers of professional practice, civic contribution, and leadership, facilitated by active lifelong learning. This educational process is true to the founders' directive to create, to discover, and to convey knowledge at the frontiers of academic inquiry for the

betterment of society. Knowledge is created and discovered in the scholarly activities of faculty and students ranging across educational methodology, professional practice, and basic research. Knowledge is conveyed through scholarly publication and instruction.

Adopted by the Board of Trustees, May 22, 1987

THE GOAL OF WPI

WPI was founded in 1865 to create and convey the latest science and engineering knowledge in ways that would be most useful to the society from which its students came. Since that time, the disciplines of human inquiry have expanded extraordinarily, as have WPI's constituencies. The WPI curriculum, accordingly, has been reshaped numerous times, but it has remained true to its original mission of fusing academic inquiry with social needs, of blending abstraction with immediacy, of linking new knowledge to applications.

The goals of the undergraduate program are to lead students to develop an excellent grasp of fundamental concepts in their principal areas of study; to lay a foundation for life-long renewal of knowledge; to gain a mature understanding of themselves; and, most importantly, to form a deep appreciation of the interrelationships among basic knowledge, technological advance, and human need. These principles are today manifest in the *WPI Plan*, a unique, project-oriented program which emphasizes intensive learning experiences and direct application

of knowledge. WPI remains committed to continued educational improvement and innovation.

The goals of WPI's programs of graduate instruction and research are to create and convey knowledge at the frontiers of academic inquiry. These endeavors are founded on the principle that vigorously pursued and rigorously assessed scholarship is the lifeblood of the institution. High quality graduate instruction conveys the arts of scholarship to new generations, and it assists working professionals in maintaining currency in a world where knowledge becomes obsolete with ever-increasing rapidity.

A WPI education encompasses continuous striving for excellence coupled with an examination of the contexts of learning so that knowledge is won not only for its own sake but also for the sake of the human community of which the people of WPI are part.

Endorsed by the WPI Faculty on March 5, 1987, and by the Board of Trustees on October 16, 1987.

A STATEMENT OF VALUES FOR UNDERGRADUATE EDUCATION AT WPI

1. WPI's programs shall emphasize fundamental concepts, knowledge, and skill, and ensure that students are able to apply them within the context of their major disciplines.
2. WPI's programs shall emphasize the development of students as effective thinkers and communicators, able to use evidence to present their ideas with logic, clarity, and persuasion.
3. Programmatic breadth in general, and balance between technical and humanistic components in particular, are the hallmarks of a WPI undergraduate education. In addition to educating students in their major discipline, WPI's programs shall provide students with a broad preparation for fulfilling lives as responsible professionals and informed citizens.
4. Grounded in project and course experiences, a WPI education shall provide a firm foundation for life-long learning in a variety of fields. WPI programs shall emphasize inquiry-based learning and open-ended problem solving. Students shall bear a considerable responsibility for learning outside of the classroom.
5. WPI's programs shall be sufficiently flexible so as to allow students significant choice in and responsibility for planning their courses of study. Faculty, via the central teaching tasks of project and academic advising, shall ensure that student learning experiences encourage critical reflection, decision making, and personal growth.
6. WPI's programs shall emphasize the scientific, technical, societal, and humanistic contexts in which knowledge is applied and constructed. Education activities shall challenge students to make connections between disciplines, to consider multiple viewpoints, and to appreciate the consequences of their actions. The curriculum shall prominently feature integrative and interdisciplinary activities.
7. WPI's learning environment and educational activities shall balance personal responsibility and individual accountability with cooperation, collaboration and mutual respect. Members of the community shall be encouraged to value academic integrity, and to become conscious of the value that such integrity confers to themselves and to the community.
8. WPI shall be committed to assessment and improvement of student learning.

Graduates of WPI will:

1. have a base of knowledge in mathematics, science, and humanistic studies.
2. have mastered fundamental concepts and methods in their principal areas of study.
3. understand and employ current technological tools.
4. be effective in oral, written and visual communication.
5. function effectively both individually and on teams.
6. be able to identify, analyze, and solve problems creatively through sustained critical investigation.
7. be able to make connections between disciplines and to integrate information from multiple sources.
8. be aware of how their decisions affect and are affected by other individuals separated by time, space, and culture.
9. be aware of personal, societal, and professional ethical standards.
10. have the skills, diligence, and commitment to excellence needed to engage in lifelong learning.

Approved by the WPI Faculty on May 20, 2004.

WPI'S COMMITMENT TO PLURALISM

Pluralism, as a social condition, means that several distinct ethnic, religious, and racial communities live side by side, have equitable access to resources, are willing to affirm each other's dignity, are ready to benefit from each other's experiences, and are quick to acknowledge each other's contributions to the common welfare. Recognizing the importance of pluralism to creativity, innovation, and excellence, WPI is dedicated to creating an atmosphere that encourages diversity in all aspects of campus life—from academics, to residence hall living, to social interactions among students, faculty, and staff. The Institute recognizes the special obligation of promoting a multicultural community based on mutual respect and tolerance. This commitment is part of WPI's institutional plan for encouraging pluralism and increasing diversity, a plan that proclaims the importance of having students understand and appreciate other cultures, and prepares them fully to pursue rewarding careers in an increasingly global economy.

Concepts endorsed by the WPI Faculty on April 21, 1994.

THE TWO TOWERS TRADITION: THE SECOND CENTURY

WPI, the nation's third oldest private technological university, was established in 1865 by the New England industrialists John Boynton, Ichabod Washburn, and their associates. Boynton and Washburn endowed the first two buildings on campus, as academic classrooms and practical shops. Boynton Hall and the Washburn Shops — renovated today into state-of-the-art facilities — still preserve their distinctive original towers. These “Two Towers” represent WPI's continued commitment to academic excellence through real-life project experience that synthesizes classroom learning.

The “Two Towers” tradition of academic achievement and practical application is reflected in WPI's motto, “Lehr und Kunst” or “Theory and Practice.”

WPI has awarded graduate degrees since 1898, adding new programs regularly in response to the developing needs of the professional world. WPI is among the top 50 science colleges in the nation in terms of the percentage of undergraduates who receive doctorates. Presently, WPI offers the master's degree in 31 disciplines and the doctorate in 15.

The current student body of over 4,000 men and women includes about 1,100 full- and part-time graduate students. Currently, students attend WPI from almost every state and over 70 foreign nations.

THE WPI PLAN

In 1970 WPI adopted a revolutionary new undergraduate program known as the *WPI Plan*. The Plan replaced the traditional rigidly-prescribed curriculum — typical of conventional engineering education — with a flexible, exciting, and academically challenging program aimed at helping students to learn *how to learn*.

The Plan continues the “Two Tower” tradition by synthesizing classroom experience in projects that solve real-world problems. The WPI project program prepares graduates for their future professional lives by helping them learn how to identify, investigate and report on open-ended problems. Alumni indicate that project experiences also prepare them uniquely well for managing team efforts, and for communicating both in oral and written forms according to professional standards.

All WPI students complete two major projects in addition to requirements in general education and in their major fields. The Major Qualifying Project (or MQP) challenges students to solve problems typical of those to be encountered in their professional discipline. The Interactive Qualifying Project (or IQP) presents an issue at the intersection of science, technology, and culture, and emphasizes the need to learn about how technology affects societal values and structures. Students also achieve intellectual breadth through degree requirements in the social sciences and humanities and arts. In addition, students achieve some depth within the Humanities and Arts by completing an Inquiry Seminar or Practicum on a theme emerging from a self-selected series of courses. Taken together, these activities emphasize that professionals must learn not only to create technology, but also to assess and manage the social and human consequences of that technology.

Programs in North America	18
Programs in Europe	21
Programs in Africa	23
Programs in Asia	24
Programs in Latin America	26
Programs in the South Pacific	27
Individually Sponsored Residential Projects	27
On-Campus IQP Programs	28
Humanities and Arts Requirement	29
The Social Science Requirement	34

WPI DEGREE REQUIREMENTS (effective for students matriculating after August 1, 2011)

WPI's academic requirements are specifically designed to develop an overall educational experience which meets the goals of the college. Each requirement plays a supporting role as follows:

- To provide intellectual breadth and a better understanding of themselves and the diversity and creativity of human experience, every WPI student must complete a **Humanities and Arts Requirement**;
- To provide an understanding of the priorities of other sectors of society, develop the ability to communicate effectively with disparate groups, organize and derive solutions to complex problems, and gain an awareness of the interrelationships between technology and people, every WPI student must complete an **Interactive Qualifying Project (IQP)**;
- To provide a capstone experience in the professional discipline, to develop creativity, instill self-confidence and enhance the ability to communicate ideas and synthesize fundamental concepts, every student must complete a **Major Qualifying Project (MQP)**;
- To provide for learning through an academic program with fabric and course balance while encouraging individual student choices within that framework, every student must fulfill **Distribution Requirements**.

WPI TERMS AND CREDIT UNITS

The Bachelor degree from WPI normally is based upon a residency at WPI of 16 terms. WPI operates on a system with four seven-week *terms*, two in the autumn semester (Terms A and B) and two in the spring semester (Terms C and D). A summer session, Term E, is also available. The normal academic load for each term is defined as *one unit* of work, usually divided among three courses or projects. Thus, the usual credit unit for courses or independent study/projects is 1/3 unit. *Qualifying Projects*, defined on pages 13-17, require one full unit of activity which may be concentrated into a single term (especially if conducted off-campus) or spread throughout an academic year. The degree will be awarded upon completion of the following:

DEGREE REQUIREMENTS

1. **The Humanities and Arts Requirement** (See page 29)
Qualification by overall evaluation of two units of work in the humanities and arts.
To provide intellectual breadth and a better understanding of themselves and the diversity and creativity of human experience, every WPI student must complete a **Humanities and Arts Requirement**.
2. **The Mathematics and Science Requirement** (See distribution requirements for individual programs, starting on page 35)
The Mathematics and Science Requirement defines a minimum standard of scientific, technological, engineering, and mathematical literacy for graduates of WPI, regardless of major field. Most degree programs will provide a substantial

level of preparation in most of these areas, far beyond this standard. Students will satisfy this requirement by satisfying the program requirements of their individual major programs.

The goals of the Mathematics and Science Requirement at WPI are that students will be able, in their careers and daily lives, to: 1) explain and apply key concepts and principles of scientific disciplines and use an understanding of scientific methods to make critical judgments, 2) apply mathematical methods to understand the solution of real-world problems, 3) productively and appropriately use computers and other technology, 4) use methods from the quantitative, natural or engineering sciences to systematically identify, formulate, and solve problems.

The specific requirement is two units of work in science, engineering, mathematical science or computer science. Two-thirds units of work must be in Quantitative Science (courses with prefixes CS or MA count by default); two-thirds units of work must be in Natural or Engineering Science (courses with prefixes BB, BME, CHE, CE, CH, ECE, ES, GE, ME, PH or RBE count by default); the final two-thirds unit may be from any of the Quantitative, Natural or Engineering Sciences. Each major program may set more restrictive requirements as the program sees fit. Programs may also propose other work to fulfill any portion the two-unit Requirement; such alternatives must be approved by the Committee on Academic Policy and the Dean of Undergraduate Studies.

3. **The Interactive Qualifying Project** (See page 16)
Successful completion of a qualifying project relating science and/or technology to society (the Interactive Qualifying Project, or IQP) representing at least one unit of credit in project or independent study work. The format of the documentation is to be in accordance with current WPI policy on such documentation.
4. **The Major Qualifying Project** (See page 15)
Successful completion of a qualifying project in the major area of study (the Major Qualifying Project, or MQP) representing at least one unit of credit in project or independent study work. The format of the documentation is to be in accordance with current WPI policy on such documentation.
5. **Distribution Requirements** (See program description for specified departments – page 35)
Satisfaction of published academic activity distribution requirements in or relating to the major area of study. These requirements typically total no more than ten units (including the MQP and two units to fulfill the Mathematics and Science Requirement) and are specified by general topical subject area, not by specific courses. Completion of distribution requirements will be certified by the appropriate Program Review Committee (PRC), upon recommendation by the student's academic advisor. For students desiring designation of a major area for which a determination regarding distribution requirements has not previously been made and published, a faculty committee will be appointed by the department head or IGSD dean to review and approve the student's program of study.

6. **Social Sciences** (See page 34)
Completion of 2/3 unit of work in the social sciences, exclusive of qualifying project.
7. **Residency Requirement**
A minimum of eight units *must* be completed satisfactorily in residence at WPI. (It is anticipated the normal residence at WPI will be 16 terms.)
8. **Minimum Academic Credit**
The minimum academic credit required for the Bachelor degree is 15 units. Credit accumulated beyond the published distribution requirements shall be accomplished by the addition of “free elective” work.
9. **Physical Education** (See page 100)
Qualification in physical education shall be established by completing 1/3 unit of course work (four PE classes) or its equivalent. Such an equivalent, for example, may be participation in club or varsity sports.

MAJOR AREAS OF STUDY

Guidelines for the construction of the most common major programs are given alphabetically by area in the “Department and Program Descriptions” section beginning on page 35. The exact program of study for any student, however, is developed by the student with the aid of an advisor.

All of the majors below, with the exception of Environmental and Sustainability Studies, and Liberal Arts and Engineering, are awarded with the B.S. degree. Some programs are listed that are developed through the departments indicated in parentheses. In the past, WPI has graduated students in the following fields, but this list should not be interpreted as necessarily putting any restriction on a student’s “major:”

- Actuarial Mathematics (MA)
Aerospace Engineering (ME)(accredited by ABET)
Architectural Engineering (AREN)
Biochemistry (CBC)(certified by the American Chemical Society)
Bioinformatics and Computational Biology (BCB)
Biology/Biotechnology (BB)
Biomedical Engineering (BME)(accredited by ABET)
Specializations in:
Biomaterials and Tissue Engineering
Biomechanics
Biomedical Instrumentation, Biosignals,
and Image Processing
Chemical Engineering (CHE)(accredited by ABET)
Concentrations in:
Biochemical
Biomedical
Environmental
Materials
Chemistry (CBC)(certified by the American Chemical Society)
Concentrations in:
Medicinal Chemistry
Civil Engineering (CEE)(accredited by ABET)
Subareas in:
Structural and Geotechnical Engineering
Environmental Engineering
Transportation Engineering
Urban and Environmental Planning
Construction Engineering and Project Management
Concentration in:
Environmental

- Computer Science (CS)(accredited by ABET)
Computers with Applications (CS)
Economic Science (SSPS)
Concentrations in:
Sustainable Economic Development
Computational Economics
Electrical and Computer Engineering (ECE)(accredited by ABET)
Subdisciplines in:
Robotics
Power Systems Engineering
RF Circuits and Microwaves
Communications and Signal Analysis
Biomedical Engineering
Analog Microelectronics
Computer Engineering
Engineering Physics (PH)
Environmental Engineering (CEE; CHE; ME) (accredited by ABET)
Environmental and Sustainability Studies (B.A. degree) (ID)
Humanities and Arts (HU)
Concentrations in:
American Studies
Environmental Studies
Humanities Studies of Science and Technology
History
Literature
Music
Philosophy, Religion
Drama/Theatre
Writing and Rhetoric
Art History
German Studies
Hispanic Studies
Science and Technology
Industrial Engineering (BUS) (accredited by ABET)
Interactive Media and Game Development (HU; CS)
Artistic Track
Technical Track
Interdisciplinary (by arrangement)(IGSD)
International Studies (HU)

Liberal Arts and Engineering (B.A. degree)(HU)
 Management (BUS)(accredited by AACSB)
 Management Engineering (BUS)(accredited by AACSB)
 Concentrations in:
 Biomedical Engineering
 Civil Engineering
 Electrical and Computer Engineering
 Entrepreneurship & Innovation
 Mechanical Engineering
 Manufacturing Engineering
 Operations Management
 Management Information Systems (BUS)(accredited by AACSB)
 Mathematical Sciences (MA)
 Subareas in:
 Algebraic and Discrete Mathematics
 Computational and Applied Analysis
 Operations Research
 Probability and Statistics
 Mechanical Engineering (ME)(accredited by ABET)
 Concentrations in:
 Aeronautics
 Astronautics
 Biomechanical
 Engineering Mechanics
 Mechanical Design
 Manufacturing
 Materials Science and Engineering
 Robotics
 Thermal-Fluid Engineering

Physics (PH)
 Professional Writing (IGSD)
 Psychological Science (SSPS)
 Robotics Engineering (CS; ECE; ME)(accredited by ABET)
 Society, Technology and Policy (SSPS)
 System Dynamics (SSPS)

Programs for students interested in medicine, law or pre-college education can be readily developed from many of the above majors.

Interdisciplinary (individually-designed) majors (ID) may also be developed under the B.S. or B.A. degree; see Interdisciplinary Programs, page 83.

WPI undergraduate diplomas designate “Bachelor of Science” or “Bachelor of Arts” as appropriate. The transcript will list the student’s major. If a Minor or Concentration was completed, this will also be included on the transcript.

The number of majors associated with a single WPI Bachelor’s degree is **limited to two**.

PROFESSIONALLY ACCREDITED PROGRAMS

WPI is accredited as an institution by the **New England Association of Schools and Colleges**. In addition, the aerospace engineering, biomedical engineering, chemical engineering, civil engineering, electrical and computer engineering, environmental engineering, industrial engineering, mechanical engineering, and robotics engineering programs are accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012, telephone: (410) 347-7700. The WPI Computer Science

Program is accredited by the Computing Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012 - telephone: (410) 347-7700. The Chemistry and Biochemistry Department and its program are approved by the **American Chemical Society**. The bachelor’s and master’s degree programs in business offered by the School of Business are accredited by **AACSB International — The Association to Advance Collegiate Schools of Business**.

WPI's advising program is based on a cooperative and understanding relationship between the students and advisors. Under the WPI Plan, *students have the final responsibility* for designing their own educational experience at WPI which includes *understanding all their degree requirements and making sure all those requirements have been satisfied for graduation*. The role of the faculty advisor is to help his/her advisees design a program of study which reflects the students' interests and professional goals. While advisors are willing to suggest specific programs of study, they will not insist that students follow a particular path. Advisors also help students choose among academic alternatives, help them interpret catalog requirements and review degree audits and grade reports with them. Students are expected to understand these documents and their implications for academic progress and act accordingly. Therefore it is critical that students take the initiative to consult regularly with their academic advisors.

The Office of Academic Advising at WPI has three main areas of focus: 1) general academic advising; 2) academic resources; and 3) pre-professional programs.

GENERAL ACADEMIC ADVISING

Students can come to the Office of Academic Advising to get general advising help in areas such as course selection, academic status concerns, major and advisor selection, and individualized academic coaching. The Office of Academic Advising oversees programming for the First Year, including the Insight Program and the Insight Wellness course.

The academic coaching program includes counseling from an Academic Advisor (or PAC - Peer Academic Coach) in areas such as learning styles, effective study strategies, problem solving and critical thinking skills, and time management. Students work on setting their academic goals, discovering their strengths and weaknesses, and designing learning and study strategies that work best for them.

ACADEMIC RESOURCES CENTER

The Academic Resources Center (ARC) at WPI is located in Daniels Hall, and houses the academic tutoring program, the Writing Center, MASH (Math and Science Help) and the Peer Academic Coaching program. Peer tutors and academic coaches are students who have demonstrated a mastery of material, and have been trained in peer tutoring and communication.

The MASH program is an academic support program for students enrolled in math and science classes. Offered to all students in a supported course, MASH provides assistance in regularly scheduled weekly study sessions beginning the first week of every term.

MASH review sessions are offered for a limited number of courses which students and faculty have identified as challenging. Many of the courses are typical first year classes, allowing extra support for students transitioning to college-level work. Each session is guided by a MASH leader, an undergraduate student who has taken the course before and has excelled. He/she understands the course material and what the instructor expects. MASH leaders attend lectures so they are prepared for questions that might arise in a MASH session.

Through the MASH, tutoring, and PAC program, students become actively involved with the content material in a supportive environment. Studies show that students who attend MASH, tutoring, and see a PAC regularly earn higher grades than students electing not to participate. But even more importantly, they learn how to master new concepts, learn how to put ideas into perspective, develop a better way to study, and effectively manage their time.

PRE-PROFESSIONAL ADVISING

The Pre-Professional Advisor works with teacher preparation, pre-law, and pre-health students. Students can come to the office to receive course advice regarding pre-requisite courses for various professional schools (veterinary medicine, optometry, physician assistant, physical therapy, law, and medical school, among others.) The advisor works with students to fit the pre-requisite into their schedules while also fulfilling major course requirements.

The Office of Academic Advising collaborates with the Career Development Center to offer special programming for pre-professional students. Students interested in pre-health, pre-law, and teacher preparation can receive academic coaching from the pre-professional advisor. Pre-health students are assisted through the application process for many health related graduate programs. Students often make appointments with the pre-professional advisor to explore their different options within different health related careers.

Students can make an appointment for any of these services by going to www.wpi.edu/offices/arc or calling x5381.

OFFICE OF DISABILITY SERVICES

Academic accommodations are available for students with documented disabilities. Please see page 197 for more information.

CONCENTRATIONS

DEFINITION

A Concentration is an option associated with a Major which provides recognition for focused and coordinated academic work either within the Major or within an area of study closely related to the Major.

RULES

1. All Concentrations require completion of two units of integrated academic study plus an MQP with a topic and content appropriate to the given Concentration.
2. Concentrations deemed to belong exclusively or primarily within the stated Major must be accommodated within the distribution requirements of that Major.
3. Concentrations deemed to have a substantial interdisciplinary nature can exceed the normal 10-unit allotment of the Major by as much as 1 unit, provided that the additional requirements do not include or permit academic work designated by the Major prefix or coursework normally taken to satisfy the Major's portion of the distribution requirements. Furthermore, Concentrations of an interdisciplinary nature are permitted to use up to 1 unit of the academic program beyond the distribution requirements of the Major, including the IQP, Social Science requirement, and Free Electives, as deemed appropriate.
4. The requirements of the Concentration must be designed to offer choices for the student within the Major area and, if relevant, outside the distribution requirements of the Major; however, the Concentration requirements must not preclude meeting the normal distribution requirements for the Major.
5. Rules and guidelines for each Concentration will be formulated by the faculty associated with the governing Major, and must be reviewed by the Committee on Academic Operations (CAO) and subsequently approved by the Faculty. CAO is empowered to rule on whether a proposed Concentration is disciplinary or interdisciplinary.
6. An individual program of study leading to a Major with a Concentration will be planned by a student in consultation with his/her academic advisor. The student's intention to pursue a Concentration will be declared by application to the appropriate Program Review Committee in accordance with that Committee's schedule of deadlines. Application deadlines should be designed to enable Committee review and communication of decisions to students at a sufficiently early point that flexibility of schedule still exists. Extenuating circumstances may be considered at the discretion of the Program Review Committee.
7. Concentrations and minors are additional degree designations. Any credit earned for an additional degree designation must not overlap with credit earned for another additional degree designation by more than one unit. Also, no credit-bearing activity may be triple-counted towards degree designations or degree requirements.

Listings of Concentrations may be found in the "Department and Program Descriptions" section beginning on page 35.

MINORS

DEFINITION

A Minor is a thematically-related set of academic activities leading to a degree designation in addition to but separate from that granted by the Major. A Minor should be available to students of any Major, with the exception of a Minor which overlaps with a Major area to such an extent that it is not sufficiently distinct from that Major. The Committee on Academic Operations (CAO) is responsible for the review of proposed Minor Programs and decisions regarding allowed Major/Minor combinations.

RULES

1. A Minor requires completion of two or more units of thematically related activity. The concluding (**taken last**) 1/3 unit of the Minor must be a capstone experience that marks completion of the Minor.
2. It is expected that Minor requirements will be structured so that all acceptable Major/Minor combinations can be accommodated within a normal 16 term framework.
3. A Minor may include any portion of the academic program, excluding the MQP. Academic activities used in satisfying the regular degree requirements may be double-counted toward meeting **all but one unit of the Minor requirements**, subject to the following restrictions:
 - a. The one unit of double-counted work may include at most 1/3 unit of the IQP, 3/3 units of the Humanities and Arts Requirement, or a combination thereof.
 - b. At least one unit of the Minor, including the capstone activity, must be free elective choices. For the social science exception see page 111.
4. The Program Review Committee for a Minor area will consist of faculty members designated by the sponsoring faculty members.
5. A Minor area must be proposed by a sponsoring group of faculty and must be defined by the purpose of achieving an educational goal beyond those apparent or implicit in the regular degree requirements. Student-initiated Minor Programs must be developed with the approval of a sponsoring group of faculty advisors. Each Minor Program must be reviewed by CAO for its individual merit.
6. Minors are additional degree designations. Any credit earned for an additional degree designation **must not overlap with credit earned for another additional degree designation by more than one unit. Also, no credit-bearing activity may be triple-counted** towards degree designations or degree requirements.

Minors are described in the "Program Description" section of this catalog. Minors sponsored by a department are described following the department. Others are listed alphabetically by title. As of the printing of this catalog, the following Minors have been approved:

Biology; Biochemistry; Business; Chemistry; Computer Science; Drama/Theatre; Economics; Electrical and Computer Engineering; English; Entrepreneurship; German; History; Industrial Engineering; International Studies; Law and Technology; Management Information Systems; Manufacturing

Engineering; Materials; Mathematics; Music; Physics; Political Science and Law; Psychology; Robotics Engineering; Social Entrepreneurship; Social Science; Sociology; Spanish; System Dynamics; Statistics; Writing & Rhetoric.

Interdisciplinary or Individually Designed (ID) minors are approved by the Committee on Academic Operations (CAO).

The form needed to add a minor or to propose an interdisciplinary or individually designed minor can be found in the Registrar's Office.

DOUBLE MAJORS

An option for some students who wish to broaden their WPI experience is the completion of two distinct majors through the double major option. The choice to pursue a double major should be made early in a student's career. No student shall complete more than two undergraduate majors.

For double majors, the diploma may list both majors (in order of preference by the student), either major, or no major as indicated by the student.

A double major should signify capacity in two distinct disciplines. Some combinations of double majors are not sufficiently distinct to merit this designation. Departments and programs decide whether any combinations of double majors overlap to such an extent as to be disallowed. As of the publication date of this catalog, the following combinations are not allowed:

- Actuarial Mathematics and Mathematics
- Aerospace Engineering and Mechanical Engineering
- Biochemistry and Chemistry
- Civil Engineering and Architectural Engineering
- Civil Engineering and Environmental Engineering
- Computer Science and Computers with Applications
- Humanities and Arts and International Studies
- Industrial Engineering and Management Engineering with Concentration in Operations Management
- Physics and Engineering Physics

Students who wish to pursue any double major should consult with faculty advisors in both majors. Exceptions to disallowed double majors must be approved by the Committee on Academic Operations.

Degree requirements for double majors are as follows:

1. The Humanities and Arts Requirement.

No modifications are made to the Humanities and Arts Requirement for double majors. All students, including majors in Humanities and Arts or International Studies must satisfactorily complete the Humanities and Arts Requirement culminating in an Inquiry Seminar or Practicum.

2. The Interactive Qualifying Project.

If one of the majors of a double major is in Social Science and Policy Studies, a single project bearing at least one unit credit may be used to satisfy both the MQP requirement for the SSPS major and the IQP requirement. In order to be used to satisfy both requirements, the combined social science MQP and IQP must meet the goals of both projects. It must be interactive in nature involving an aspect of technology, and must also be an application of social science knowledge

and analytical techniques. In order to select a single project that satisfies both the goals of the MQP and the goals of the IQP, the decision to pursue a social science double major needs to be made fairly early in the student's career.

3. The Major Qualifying Project.

At least one separate and distinct major qualifying project of at least one unit of work must be completed for each major, unless a student receives permission from his/her MQP advisor to pursue a single interdisciplinary MQP of at least 4/3 units of credit (See the Major Qualifying Project.)

4. Distribution Requirements.

The distribution requirements of each major must be met, but requirements common to both majors have to be met only once. The MQP requirements for Double Majors may be fulfilled in either one of two ways:

- Two distinct projects, one in each major, each of at least one unit of credit.
- One interdisciplinary project of at least 4/3 units of credit, and having significant work associated with each major. An interdisciplinary project must be:
 - jointly advised by at least two faculty members, one associated with each of the relevant degree programs; OR
 - advised by a single faculty member who is associated with both of the relevant degree programs.

Faculty associated with each degree program are listed in Section 2 of the WPI Undergraduate Catalog.

An interdisciplinary MQP involving social science may not be used as an IQP.

The interdisciplinary MQP option takes advantage of the value of interdisciplinary work at the intersection of the two majors. Students undertaking an interdisciplinary MQP must complete an *interdisciplinary MQP approval form* in advance of project registration, and this form must be signed by all advisor(s) on the project. This form must contain a summary of the proposed project work indicating the content relating to each major. The interdisciplinary MQP option is available only at the discretion of the faculty and only when all faculty advisor(s) agree on the project content. Students planning to use this option should identify and consult with their faculty advisor(s) well before the end of their junior year.

For a double major, completion of a 4/3 unit interdisciplinary MQP completes the 1 unit MQP requirement for each major. The assignment of credit is as follows: 2/3 unit is double counted toward each major, and the remaining 2/3 unit is allocated as 1/3 unit to one major and 1/3 unit to the other major.

Note: It is anticipated that in some cases a student pursuing a double major will join a project team whose other members are pursuing a single major. The double-majoring student will bring the interdisciplinary content to the project, and this additional work will be represented by the additional credit that that student (perhaps only that student) earns, and with an enlarged report prepared by that student.

For students wishing to pursue double majors, the program audit for each intended major must be completed and certified by the review committee of each department involved. Academic activities appropriate to both majors may be counted in both majors. For the policy in the special situation of double majors involving the social sciences see the Social Science and Policy

Studies department description in Section 2 and the Double Major Distribution Requirements in Section 4 of the Undergraduate Catalog.

Certain interdisciplinary MQP's and corresponding double-majors in the same department are not allowed.

Interdisciplinary MQP's with two faculty advisors: All faculty advisors have equal status in approving the final project, and a single grade is submitted for each term's work and a single

project grade is submitted on the CDR form. Should an interdisciplinary MQP, once completed, be deemed acceptable as an MQP for one of the two majors, but not for the other, and/or if the faculty advisors cannot agree on a single grade after much effort to do so, the project may be considered as the MQP for a single major. This conversion can only occur with the consent of the student and the advisor(s) from the single major being selected.

PROJECTS

Project activity is an integral part of the educational experience for all students under the WPI Plan. The two types of qualifying projects are:

1. A project in the major field of study (the Major Qualifying Project, or MQP).
2. A project which relates technology and science to society or human needs (the Interactive Qualifying Project, or IQP).

Projects should be chosen in consultation with the student's academic advisor and must be accepted by a project advisor before project registration can be completed. Many project opportunities come from off-campus organizations, and provide challenges to solve real-world problems and thus gain experience invaluable for seeking jobs and for professional practice. Students are encouraged to develop their own projects, to solicit support for their ideas from potentially interested faculty, and to form teams to pool resources and share points of view.

The Major Qualifying Project should focus on the synthesis of all previous study to solve problems or perform tasks in the major field with confidence, and communicate the results effectively.

The Interactive Qualifying Project should challenge students to relate social needs or concerns to specific issues raised by technological developments.

PAY AND CREDIT (for students working on sponsored projects)

A student may receive pay for work associated with a registered project under the following conditions:

1. The work done for pay is clearly distinguished from the work defined for academic credit for the project. This distinction must be clearly articulated in a conflict of interest statement signed by all participating parties before the project begins.
2. Results obtained from paid or unpaid work performed while students are not registered for project credit at WPI may be used in projects only after consultation with the project advisor. When possible, such consultation should take place before work begins.

RESOURCES - GETTING STARTED

Students are encouraged to avail themselves of the many resources and advice areas found in the Projects Program web page (projects.wpi.edu).

In addition, personal advice can be provided by meeting with the project coordinators listed on page 191.

AVAILABLE PROJECTS

Students may obtain information about new or ongoing projects from a variety of sources. Principal sources include discussions with other students, especially those currently involved in a project, the Projects Program web site, department offices, or their web pages. Off-campus projects are discussed annually in the fall. In the spring, "Available Projects" on the Projects Program web site (www.wpi.edu/Academics/Projects/) can be used as a directory of specific IQP projects or as a source of ideas for developing your own projects. Some students will find a project listed which fits their needs and interests exactly. In other cases, the listing will serve to lead students to a faculty member with whom project involvement can be negotiated. The proposals in the Projects Program web page are updated periodically to provide an accurate listing of available projects.

Students are encouraged to check the web site of the department of their major for MQP opportunities, as well as consult with their academic advisor.

PROJECT ADVISOR

Academic advisors can assist students in identifying a project. They are aware of the project interests of many other faculty members, and have a list of faculty interests which will enable a student to find a faculty member who can help to develop a project idea. Faculty associated with the Interdisciplinary and Global Studies Division (IGSD) are available to assist students in interdisciplinary and interactive projects.

PROJECT PERFORMANCE AND TIME-ON-TASK

A student is normally expected to expend 15-17 hours per week on the average for each 1/3 unit of credit for project work, and expected achievement is based upon that commitment.

A project group, whether it involves one student or more, should have a minimum of one scheduled conference per week with the advisor(s). Additional time should be scheduled when the effort exceeds 1/3 unit per student or when more students are involved.

Students should be prepared to submit interim project reports to the advisor each week. Students are also encouraged to complete a proposal at the beginning of the project activity to define the scope and timeline for completion of the effort. In addition, oral reports may be required as determined by the advisor. At the end of the project, a report must be prepared to the satisfaction of the project advisor. For projects sponsored by off-campus organizations, both a written and oral report for the sponsors is normally expected.

ELECTRONIC PROJECT SUBMISSION

WPI requires that all undergraduate students submit their Interactive Qualifying Project (IQP) and Major Qualifying Project (MQP) electronically (“eProjects”).

Students must be registered for a minimum of 1/6 unit of qualifying project credit in the term in which the final project report is submitted. An eProject must be submitted via the web site, wpi.edu/+eprojects, following the steps outlined there.

No matter which format is used to create the original report document (Microsoft Word, Latex, or other), the final report must be converted to a PDF format in order to be submitted as an eProject. For information on converting to a PDF, go to wpi.edu/+ATC/Collaboratory/HowTo/. Every eProject must include a title page and must follow the formatting guidelines described at wpi.edu/+Projects/finishing.html.

The deadline for the submission of the initial report draft and the final document may be established at the discretion of the project advisor. Drafts and reports need *not* be accepted by the advisor after the established deadline.

The final PDF is required, but additional related files such as simulations, computer programs, multimedia, and data sets may be submitted as a component of the project.

A project that is completed by a team of students, except in extenuating circumstances, will submit ONE project report from the group. After the MQP or IQP team submits the final version of the project report, the advisor must review the work and approve or reject it online at wpi.edu/+eproject.

The final project report should be carefully proofread. Once the submitted project has been approved by the advisor and released for archiving by the Registrar’s Office, it is considered an academic record and cannot be edited.

A completed electronic Completion-of-Degree-Requirement (eCDR) form, must be printed for signature by each student and signed individually by the advisor as the final step in the submission process. The eCDR form must be submitted in person by the project advisor or a member of the academic department of the advisor to the Office of the Registrar by no later than the second day of the next academic term.

A student who has filed an application to receive their degree in May must submit a completed eCDR to the Office of the Registrar by the last Thursday in D-term.

GROUP QUALIFYING PROJECT EFFORTS

Students meeting a qualifying project degree requirement by participation in a group, or team effort, will submit, at the discretion of the project advisor, either a single, comprehensive written report from the group, or individual written reports from each member of the group. A single, comprehensive written report must, however, include some means by which each individual’s contribution to the group effort may be clearly identified. This identification may take the form of an “author-ship page,” simply a list of individual chapters and their respective authors, or of a prefacing statement in which each contributing group member is named as having carried out one or more specific tasks within the overall project effort.

In the case where one or more students leave an ongoing group project after having contributed at least one unit each of project effort, those students, again at the discretion of the project advisor, will submit either a single written report or individual written reports in satisfying the qualifying project documentation requirement. The same means of identifying individual contributions will be employed as described above.

THE WRITING CENTER

(Daniels Hall 111)

Accompanying strong emphasis on project work at WPI is strong emphasis on high quality presentation of materials such as proposals, written reports, term papers, and abstracts. To assist you in developing your writing and oral presentation skills, WPI has established The Writing Center that offers writing and presentation consultations, style guidelines, writing manuals and presentation videotapes. Style guidelines, writing manuals and specially prepared handouts concerned with report writing are available. Small group or individual conferences scheduled by appointment with the writing tutors constitute an additional service provided by the Center to help students with their writing skills. For further information, contact Lorraine Higgins (Salisbury Labs 20).

DISSEMINATION OF PROJECT REPORTS

MQPs and IQPs completed for off-campus agencies are usually distributed within the sponsoring agency by the agency project liaison. A project report may be restricted from public viewing if it contains confidential or proprietary information of a sponsoring agency. Completed project reports are electronically archived at WPI’s Gordon Library, are indexed and are available to the public (<http://www.wpi.edu/+library>).

Students are responsible for keeping personal copies of project reports for their own permanent professional records. In this way, reports can be reviewed for later use, and incorporated into a professional portfolio.

Thus, MQPs and IQPs are best viewed as research reports which establish good professional practices as well as being potential sources for further study and research.

OFF-CAMPUS INSURANCE AND LEGAL AGREEMENTS

WPI’s insurance program includes a broad range of coverage for students doing projects in cooperation with off-campus organizations. This insurance coverage requires proper documentation of individual student participation. All students doing project work with off-campus organizations must complete the pertinent portion of the project registration form. In certain cases, where the project is included as part of a regular course, the course instructor must submit to the Projects Office a list of the students going off campus and the name(s) and address(es) of the organization(s) involved.

WPI has entered into a variety of agreements with off-campus organizations, covering a wide range of issues common to the projects program. Students agree to abide by these agreements during the registration for the project.

The qualifying project in the major field of study should demonstrate application of the skills, methods, and knowledge of the discipline to the solution of a problem that would be representative of the type to be encountered in one's career. The project's content area should be carefully selected to complement the student's total educational program. In defining the project area within which a specific topic is to be selected, the student and academic advisor should pay particular attention to the interrelationships that will exist between the bodies of knowledge represented by courses, independent studies, and Preliminary Qualifying Projects; and by the Interactive Qualifying Projects.

MQP activities encompass research, development, and application, involve analysis or synthesis, are experimental or theoretical, emphasize a particular subarea of the major, or combine aspects of several subareas. In many cases, especially in engineering, MQP's involve capstone design activity. Long before final selection of a project topic, serious thought should be given as to which of these types of activities are to be included. Beyond these considerations, the MQP can also be viewed as an opportunity to publish or to gain experience in the business or public sectors.

Off-campus MQPs are also very valuable for access to state-of-the-art resources and contacts for future professional work.

GETTING STARTED ON AN MQP

Project topics are originated by students, faculty, or practicing professionals participating in WPI's off-campus project programs. A faculty member in each academic department acts as Project Coordinator for all majors within the department. The Project Coordinator has assembled MQP topic descriptions being proposed and has identified the faculty who will serve as project advisors for each topic. All project opportunities—MQP, IQP, PQP, on-campus originated and off-campus originated—are made available to the student body through a planned information-sharing program of activities during C and D terms of the academic year prior to the start of the project.

PROJECT PROPOSALS

Students are strongly encouraged to begin their MQPs with a project proposal. A detailed guide to preparing project proposals is available in department offices or on the Projects Program web page (www.wpi.edu/Academics/Projects/).

MQP LEARNING OUTCOMES

By completing their MQP, WPI students will achieve the following learning outcomes at a level at least equivalent to that of an entry level professional or graduate student.

Students who complete a Major Qualifying Project will:

1. apply fundamental and disciplinary concepts and methods in ways appropriate to their principal areas of study.
2. demonstrate skill and knowledge of current information and technological tools and techniques specific to the professional field of study.
3. use effectively oral, written and visual communication.
4. identify, analyze, and solve problems creatively through sustained critical investigation.
5. integrate information from multiple sources.
6. demonstrate an awareness and application of appropriate personal, societal, and professional ethical standards.
7. practice the skills, diligence, and commitment to excellence needed to engage in lifelong learning.

Specific disciplinary programs may add additional MQP outcomes, such as design or mathematical skills or teamwork, as appropriate.

MQP PROJECT CENTERS

Each project center has a WPI faculty member as the director, well-defined procedures for completing project work, and selective admissions processes. The Centers tend to be highly structured and require superior performance.

At the present time, the WPI project center close to campus is:

- University of Massachusetts Medical School Project Center/
Tufts University Cummings School of Veterinary Medicine.

See also page 18 for residential Project Centers at a distance from WPI.

UNIVERSITY OF MASSACHUSETTS MEDICAL SCHOOL PROJECT CENTER/TUFTS UNIVERSITY CUMMINGS SCHOOL OF VETERINARY MEDICINE

Major qualifying projects are available at nearby University of Massachusetts Medical School (UMMS) and Tufts University Cummings School of Veterinary Medicine (TUCSVM) for students from many disciplines on campus. These institutions are nationally recognized for research and medicine and offer project opportunities over a wide range of research areas. Students performing projects at these centers work in cutting edge research programs and typically interact with graduate and post-doctoral researchers to solve real-world problems.

It is recommended that students spread their projects over the entire academic year. Students from any major interested in project opportunities should contact Dr. Destin Heilman in the department of Chemistry and Biochemistry.

At WPI, students are expected to develop an understanding of how science and technology are embedded in the fabric of society. The Interactive Qualifying Project (IQP) challenges students to address a problem that lies at the intersection of science or technology with society. During the IQP, students work in interdisciplinary teams, often with an external sponsoring organization, to develop solutions to real world problems. In doing so, students learn something about the role of science and technology, its impact on society, its place in meeting human needs and human efforts to regulate, control, promote and manage our changing technologies. The IQP is equivalent to three courses, typically undertaken in a student's junior year. It can be completed over three terms, or as a full course load for a student for one term, and it can be completed on-campus, or at one of our many residential project centers in the U.S. and abroad. For more on the IQP see the websites of the Interdisciplinary and Global Studies Division (IGSD) at <http://www.wpi.edu/academics/iqp.html>. For more on the IQP and study abroad, see the Global Perspective Program website: <http://www.wpi.edu/academics/igsd/gpp.html>. Completed IQPs are electronically archived at WPI's Gordon Library, are indexed and are available to the public (<http://www.wpi.edu/+library>).

IQP LEARNING OUTCOMES

The Faculty adopted the following statement defining learning outcomes for the IQP. Successful completion of an IQP is an important element in helping students achieve WPI's overall undergraduate learning outcomes.

Students who complete an Interactive Qualifying Project will:

1. Demonstrate an understanding of the project's technical, social and humanistic context.
2. Define clear, achievable goals and objectives for the project.
3. Critically identify, utilize, and properly cite information sources, and integrate information from multiple sources to identify appropriate approaches to addressing the project goals.
4. Select and implement a sound methodology for solving an interdisciplinary problem.
5. Analyze and synthesize results from social, ethical, humanistic, technical or other perspectives, as appropriate.
6. Maintain effective working relationships within the project team and with the project advisor(s), recognizing and resolving problems that may arise.
7. Demonstrate the ability to write clearly, critically and persuasively.
8. Demonstrate strong oral communication skills, using appropriate, effective visual aids.
9. Demonstrate an awareness of the ethical dimensions of their project work.

PREPARING FOR AND FINDING AN IQP

Students are encouraged to view the IQP as a learning opportunity – a chance to gain knowledge outside their major field – while working with others to solve open-ended, complex problems. The best approach is to consult with one's academic advisor and select courses to be taken in the first and second year at WPI that can provide a foundation for an IQP in the junior year. Often project preparation involves developing an understanding of the social sciences and humanities, as the concepts and analytical techniques of these disciplines are important in understanding the social context of science and technology. In addition, students enrolled in the Global Perspective Program will be expected to complete a course devoted to project preparation in advance of their travel.

Project topics originate with external organizations, faculty and students. Students who complete IQPs at a residential project center through the Global Perspective Program work on project topics identified by external sponsoring organizations. Students can explore these opportunities at the Global Opportunities Fair organized each September by the Interdisciplinary and Global Studies Division (IGSD). Students completing projects on campus are encouraged to seek faculty members that share their interests to advise projects. Faculty interested in advising specific IQPs will post their project topics on-line at the IQP Registry. See <http://www.wpi.edu/Academics/Projects/available.html>. The IGSD also hosts an On-Campus Project Opportunities Fair each March where students can meet faculty advisors to discuss projects being offered on campus during the following year.

The IGSD (<http://www.wpi.edu/academics/igsd.html>) offers administrative support for project activities. Students are welcome to seek further assistance from the staff on the second floor of the Project Center.

WHAT ARE IQPS ABOUT? SCIENCE, TECHNOLOGY AND SOCIETY

Most, but not all, IQPs are indexed according to the following IQP Divisions. These Divisions assist students in locating proposed projects by topical area in the Registry of IQP opportunities (<http://www.wpi.edu/Academics/Projects/available.html>). IQP (and MQP) projects are searchable in the Library's catalog (<http://www.wpi.edu/+library>).

Division 41: *Technology and Environment.* Subjects have included a wide range of environmental problems, for example, water quality and supply, climate change, open space and growth, hazardous waste and acid rain.

Division 42: *Energy and Resources.* These projects have focused on energy supply, alternative energy technologies, conservation, and the economic and policy choices made or proposed to govern this industry.

Division 43: Health Care and Technology. Projects in this division have focused on the technologies and cost of health care delivery in the US. Ethical questions in health care have also been addressed, including abortion, stem cell research, cloning, and “right to die” issues.

Division 44: Urban and Environmental Planning. Land use planning, historic preservation, urban renewal, transportation systems and the impacts of infrastructure design are among the subjects studied in this division.

Division 45: Science and Technology – Policy and Management. IQPs in this area focus on public policy as it is used to promote or constrain technology. Examples include both public and private efforts to promote scientific research, manage innovation and understand how changes in technology result in a changing business and economic environment.

Division 46: Social Studies of Science and Technology. Students working on these projects use a sociological approach to understanding the impact of technology on society. Topics have included equity issues (gender, race, ethnicity), technological literacy, and technology assessment and forecasting.

Division 47: Safety Analysis and Liability. The study of safety analysis introduces students to the subjects of risk analysis, negligence, and standards of care in product design and use. Projects have also focused on fire risk and safety, risks associated with natural disasters and risk management.

Division 48: Humanistic Studies of Technology. Humanistic studies illuminate the social context of science and technology. History, literature, philosophy, religion and the fine arts all speak of the nature of human problems and the scientific and technological approaches used to address personal and social problems. Each discipline provides analytic methods for examining society/technology problems. Students working in this division should prepare by taking appropriate humanities courses before beginning their project.

Division 49: Economic Growth, Stability and Development. Division 49 focuses both on problems of stability and change in mature economies, and the economic problems of developing nations. Tools of economics are used to understand the relationship between technology and growth. Projects address policy issues of appropriate technology, technology transfer among countries and trade, among others.

Division 50: Social and Human Services. These projects address the problems and technologies involved in the provision of community services, broadly defined. Projects have addressed services for the mentally or physically disabled, for juveniles, seniors, consumers, and public school students.

Division 51: Education in a Technological Society. Many WPI students have helped design and test science and engineering curricula for students at all grade levels, from elementary to high school. Projects in this area have also addressed the design and testing of computer assisted learning environments and other applications of technology to learning.

Division 53: Law and Technology. Legal systems regulate technology in all aspects of life, from food safety to pollution control to intellectual property (patents, copyright). Projects in this division explore the role of courts, agency regulations and legislation in controlling the impacts and use of technology.

Division 54: Historic and Artistic Preservation Technology. The technologies of art conservation and restoration, combined with the policy and values issues involved in the preservation of historic places and works of art, form the subject matter of IQPs completed in this division.

In addition to IQP and MQP opportunities on campus, through the Global Perspective Program, overseen by the Interdisciplinary and Global Studies Division, WPI students have many opportunities to complete a project for a term at one of WPI's off-campus project sites. Some centers are residential, with students traveling to and living on site for a term, while others offer the opportunity to complete an off campus project in Worcester, Boston, or other nearby communities. Project work conducted at these sites provides teams of students with extraordinary opportunities to learn by solving real-world problems provided by industrial, non-profit, non-governmental or government agencies.

Application for IQP work in these programs begins in the fall with the Global Opportunities Fair. At the Fair, IQP, MQP, HUA and exchange program directors will be available to talk with students about these opportunities. Students should apply in Term A of the year preceding the year in which they would like to participate. Further information is available at the Interdisciplinary and Global Studies Division in the Project Center.

All students accepted to an off-campus IQP Center will be registered for the preparation course ID 2050 in the term immediately preceding their time off campus. Students must be making satisfactory progress in their academic program in order to participate.

Prior to leaving campus for a project program site, each student is required to complete a project registration form as described on page 189.

OFF-CAMPUS PROGRAMS

All programs offer students the opportunity to complete a project in one term of full-time work. Advance preparation is required. Faculty advisors are in residence at IQP sites and some Humanities and Arts and MQP sites.

PROGRAMS IN NORTH AMERICA

BAR HARBOR PROJECT CENTER – IQP

Director: Prof. F. Bianchi, Alden Memorial 205
 Located in one of the most beautiful areas of the country, the Bar Harbor, Maine, project site allows WPI students to work in close proximity to the Acadia National Park and to an abundance of research, historical, environmental, and arts organizations. Students enrolling in Term E projects in Bar Harbor will stay in residence halls on the campus of the College of the Atlantic (COA). While the similarity to college living is noticeable, it is from here that the resemblance disappears. Nestled on the east side of Mt. Desert Island, the rocky coast, mountainous terrain, and ocean vistas have long been the destination of researchers, explorers, scientists, artists, and other curious visitors. In addition to the academic and scholarly experience that awaits WPI students, the summer in Bar Harbor

Gallo, Modesto, California	MQP				<input type="checkbox"/>	
Nancy, France	MQP				<input type="checkbox"/>	
Silicon Valley, CA	MQP				<input type="checkbox"/>	
WPI-Stantec	MQP				<input type="checkbox"/>	
Budapest, Hungary	MQP					<input type="checkbox"/>

offers the lure of hiking, biking, rock climbing, swimming, sailing, nature walking, kayaking, whale watching, and more.

Bar Harbor Projects have a strong focus on the relationship and intersection between the humanities, technology, the arts, and the environment. Within this context, projects involve research and creative activities intended to offer insight into the preservation, improvement, appreciation, and sustainability of the natural environment.

BOSTON PROJECT CENTER – IQP

Co-Directors: Prof. S. Tuler, Salisbury Labs,
Prof. P. Mathisen, Kaven Hall

This world-class city, featuring a wealth of cultural, educational, recreational, and tourist opportunities, is an exciting, vital and stimulating environment in which to live and work. Projects in Boston offer students the opportunity to both live in Worcester and participate in meaningful projects for sponsors based in Boston.

Most projects will address environmental issues, with a focus on sustainability, climate change adaptation, and public health. Projects typically include field work in the city's neighborhoods and in the greater Boston area. Some projects sponsored by state or federal agencies may address regional issues. The focus on sustainability and climate change reflects their growing importance for government agencies and private organizations at all levels. Past projects include: a plan for the reduction of neighborhood disruption during the work on the Big Dig (for the North End Neighborhood Association); an analysis of the impacts of Historic Districts on surrounding neighborhoods and a method of streamlining construction permits in those districts (for the Boston Landmark Commission); adapting to seal level rise in the Boston Harbor area (The Boston Harbor Association) effects of sea level rise on water and wastewater treatment in Massachusetts (Massachusetts Department of Environmental Protection); green building policies in Newton (City of Newton); the improvement of public safety through the inventory and mapping of all underground fuel tanks (for the Boston Fire Department), as well as yearly projects for the Museum of Science and for various departments of the cities of Boston, Cambridge, Brookline, Quincy and Newton.

GALLO PROJECT CENTER – MQP

Director: Prof. H. Nowick, Goddard Hall 123,
Prof. N. Kazantzis, Goddard Hall 224A

E & J Gallo Wineries is headquartered in Modesto, CA and also has winery operations in Sonoma and Napa Valleys, Livingston and Fresno, CA.

Projects will be conducted during Term C in California. The students will work full-time at one of the sponsor's sites (most likely in Modesto) for approximately eight to nine weeks, from early January through early March. They will work with a mentor from the sponsoring company and with WPI faculty advisors. Previous MQP projects have involved wine filtration improvements, storage tank inert gas blanketing, wine carbonation and introduction of new processes, equipment and technology.

MICROSOFT PROJECT CENTER – MQP

Director: Prof. D. Finkel, Fuller Labs 231

Microsoft is one of the dominant companies in the software industry. The Microsoft projects will be conducted at the Microsoft New England Research and Development (NERD) Center in Cambridge, Mass. The NERD Center is located near Kendall Square. Students will live in Boston/Cambridge in housing arranged by WPI. The Microsoft Project Center offers MQPs for Computer Science majors only.

The projects will be conducted during Term B. The students will work full-time at Microsoft for approximately eight weeks, from mid-October through mid-December. They will work with a mentor from Microsoft and with a WPI faculty advisor. The project work will include the completion of an MQP report and presentation on the project to Microsoft.

MITRE PROJECT CENTER – MQP

Co-Directors: Prof. R. Ludwig, Atwater Kent 228,
Prof. S. Makarov, Atwater Kent 306

MITRE is a non-profit organization chartered to work on federally funded research projects for the Department of Defense (DoD), Federal Aviation Administration (FAA) and other government agencies. All projects will be conducted at the Mitre-Bedford center located in Bedford, MA. Students will commute to Bedford from WPI. Only US citizens can be considered for this program.

The MITRE Project Center provides opportunities for ECE majors. Selected participating students will have an opportunity to conduct a paid internship during the summer where they will perform background research in the respective area of their research and liaison with MITRE to learn about the project specifics and work with a company mentor. The sponsored projects will be conducted during Term A in Bedford. After completing a summer internship at MITRE, students will work full-time at MITRE for approximately eight weeks from late August through mid-October. WPI will provide daily transportation from campus to Bedford at no cost to the student participants. Each team will work with a company-designated mentor and a WPI faculty advisor.

NANTUCKET PROJECT CENTER – IQP

Director: Prof. D. Golding, Project Center

The Nantucket Island project site is a residential program with resident faculty advisors. This historic island is 14 miles long with an average width of about 3.5 miles and has about 10,000 year round residents. It was once a booming whaling center but is now primarily a tourist destination, particularly during the summer months. A National Historic District, Nantucket has changed little since the 17th century complete with cobblestone streets, old shops and lamps, seaside cottages, and historical museums. It has excellent public beaches that extend around the island, and 40% of the island is protected conservation land.

Nantucket is a high-end, tourist destination in the summer when approximately 40,000 tourists visit the island and draw on the island's limited resources. This historic site is deeply committed to historic preservation and museum studies, and the Island is an environmentally-sensitive site where much of the land is protected and where problems such as beach erosion and invasive species have created new challenges. As such, projects tend to focus on environmental challenges (e.g., waste management, tourism impacts, sustainability) and on museum studies (e.g., providing information and maps to tourists; making museum information more accessible to the public). Potential projects may include working with the following sponsors: Maria Mitchell Association, Nantucket Historical Association, Sustainable Nantucket, and the Town of Nantucket.

SANTA FE PROJECT CENTER – IQP

Director: Prof. F. Carrera, Project Center

Santa Fe, capital of New Mexico, is the oldest (1610 AD) and highest (7,199 ft) state capital in North America. Nestled at the foot of the Sangre de Cristo Mountains, Santa Fe is a quaint, human-scaled town of 70,000 Perched high above the Rio Grande in north-central New Mexico. In less than a half hour, it is possible to go from downtown Santa Fe up into the national forest, where skiing at over 13,000 feet is available until April. Santa Fe is a major center for Native American culture and a Mecca for both active and retired scientists and avant-garde artists. Due to the proximity of Los Alamos National Lab and the establishment within its boundaries of the world-renowned Santa Fe Institute (SFI), founded by George Cowan (WPI class of '41), Santa Fe has attracted world-class researchers, including several Nobel-prize winners, in the advanced field of complexity theory applied to physics, biology, economics and political science.

Despite its small size, Santa Fe is a sophisticated cosmopolitan and eclectic place where exciting opportunities for projects exist, especially at the intersection of Science and Art and in the general field of complexity applied to community issues. A bootstrap project conducted in term D 2009 identified three main areas on which to concentrate future projects: Water Conservation, Renewable Energy and Urban Planning. Given the inter-ethnic history of this part of the US, we have established research collaborations with local Native American institutions on the above topics as well as on other important environmental, cultural and societal issues. In particular, WPI has submitted grant proposals to NASA in collaboration with the Indian American Institute of Arts (IAIA) and the Santa Fe Indian School (SFIS).

SILICON VALLEY PROJECT CENTER – MQP

Director: Prof. D. Finkel, Fuller Labs 231

Silicon Valley, California, is home to many of the most dynamic companies in the computer industry and in other related high-technology industries. Recent project sponsors include SRI International (a research center), eBay, and NVIDIA as well as smaller companies. Several project center students have taken full-time positions with the sponsors and with other companies in Silicon Valley. The projects will expose students to both the cutting-edge technology and the entrepreneurship of Silicon Valley.

Students participating in the Silicon Valley Project Center will participate in a Preliminary Qualifying Project (PQP) during B-Term. During this PQP, the students will perform background research in the area of their project, learn about the company and the industry where they will be performing their project, and hold discussions with their company mentor about their project work.

The projects will be conducted during C-Term in Silicon Valley. The students will work full-time at the sponsor's site for approximately nine weeks, from early January through early March. They will work with a mentor from the sponsoring

company and with a WPI faculty advisor. The project work will include the completion of an MQP report and presentation on the project to the sponsoring organization. Admission to the Silicon Valley Project Center is based on academic standing and performance, essay response, evidence of maturity and independence, availability of projects in a specific area, qualifications relevant to the project offered, and results of an interview. Projects may be available in Computer Science, in Electrical and Computer Engineering, and Interactive Media and Game Development.

WALL STREET PROJECT CENTER – MQP

Director: Prof. A. Gerstenfeld, Washburn Shops 212.

Prof. I. Morgan

New York is one of the world's most exciting cities. Some of the best theater and museums are found there. Wall Street is known as the world center of investments and banking and is seen as the capital of business and technology. It has proven to be a training ground for the leaders of the future. New York is a place where people both work and play hard. It is fast-moving and allows the opportunity to apply many of the skills learned at WPI.

At the Wall Street Project Center, students complete MQP's while working with a wide variety of agencies, such as Bank of America, Deutsche bank and BNP Paribas. Wall Street, now much more than investments, is the center of world commerce; there is a need for WPI projects involving Computer Science, Electrical and Computer Engineering, Management, Industrial Engineering, and Mathematical Sciences. Some of our projects include work-flow analysis, risk analysis (country risk limits), system usability, and data-base corruption issues. Other projects include user on-line functionality, and user help functions for global settlement systems. The projects are challenging and important to the clients as well as to the students.

WASHINGTON PROJECT CENTER – IQP

Director: Prof. K. Rissmiller, Salisbury Labs 312

Students work on projects with prestigious sponsoring agencies while living in the heart of Washington, D.C., just blocks from the White House. The Washington Project Center is located in an attractive neighborhood near The Mall, shopping, businesses, embassies and international agencies. Take advantage of this ideal location and easy access to the subway to enjoy an endless supply of free museums, national monuments, and impressive buildings that house the seat of national government.

Past projects have been completed with such agencies as the Smithsonian, the Environmental Protection Agency, the U.S. Patent and Trademark Office, the U.S. Coast Guard, the National Science Foundation and the Consumer Product Safety Commission. This is an opportunity to examine the inner workings of government and the importance of national action in areas of the environment, science education, urban issues, and consumer protection.

WORCESTER COMMUNITY PROJECT CENTER – A Center for Community Empowerment and Environmental Responsibility (WCPC-CEER)

Director: Prof. Corey D. Dehner, Project Center

The Worcester Community Project Center (WCPC-CEER) - develops projects around three main themes: 1) environmental justice, 2) environmental policy, often focusing on water policy, and 3) social justice. The WCPC has been recognized around the city and the region as a valuable community resource. As a result, students have the opportunity to work on a number of high profile community projects. These projects often make significant, lasting contributions to the city we live in, that is, in *your community*.

Recent projects include an assessment of exposure rates of low-income and minority communities in Worcester to environmental hazards (sponsored by the Regional Environmental Council); creation of a climate action plan for the town of Auburn; assessing the information technology system at AIDS Project Worcester; working to draft and assess consumer and legislative support for an e-waste bill (sponsored by a state senator); assisting 13 central Massachusetts' municipalities with stormwater permit compliance (sponsored by the Massachusetts Department of Environmental Protection); facilitating a phase out of the sale of bottled water on WPI's campus (with assistance from Corporate Accountability International) and facilitating the implementation of One Planet Living sustainability principles into WPI operations (sponsored by Bioregional Development Group). Students will work at their sponsoring organization or at the WCPC offices in downtown Worcester and commute daily from their residences.

WPI-MIT LINCOLN LABORATORY PROJECT CENTER – MQP

Director: Prof. E. Clancy, Atwater Kent 304

MIT Lincoln Laboratory located in Lexington, MA was founded in 1951 as a Federally Funded Research and Development Center of MIT. The Laboratory's fundamental mission is to apply science and advanced technology to critical problems of national security. The scope of problems includes air defense, communications, space surveillance, missile defense, tactical surveillance systems and air traffic control.

The WPI-MIT Lincoln Laboratory Project Center conducts nine week, off-campus MQPs. Many students selected for this MQP program will also seek summer employment at Lincoln Laboratory during the summer preceding their MQP. During A-Term 2013, the students will work on their projects full-time (five days a week) for 9 weeks at Lincoln Laboratory. The first two weeks, arranged immediately prior to the normally-scheduled Term A, formally serve as the PQP period. Student teams are often interdisciplinary, and work with a mentor from Lincoln Laboratory and with one or more WPI faculty advisors. A variety of project opportunities are available.

WPI-STANTEC – MQP

Director: Professor F. Hart, Kaven Hall

Stantec is a global company with operations in Canada, the United States and the Caribbean. To date, students have completed projects in Edmonton, Alberta and Lexington, KY. For the 2013-14 academic year we will be at the Halifax office in Nova Scotia.

The projects will be conducted during Term C and students will work with a Stantec engineer at a Stantec office and a WPI faculty advisor at the WPI Campus. Project topics will cover the full range of CEE focus areas – including sustainable solutions, civil engineering and environmental engineering. Topics will be selected based on student interest and current activities at the selected Stantec office. Past topics include College Sustainability Designs, Green Guide for Roads, Sustainable Community Design, Renewable Energy Applications, Sustainable Landscape Architecture, Dam Construction and Coal Combustion By-Products. The Halifax office is one of the largest Stantec offices in North America and regularly works on projects in sustainable solutions, geotechnical engineering, materials engineering (concrete, etc), structural engineering and environmental engineering.

PROGRAMS IN EUROPE

ALBANIA PROJECT CENTER – IQP

Director: Prof. P. Christopher, Stratton Hall, 305B

Albania is located in southeastern Europe, bordering the Adriatic Sea, and across from Italy and north of Greece. It is a small mountainous country with both Mediterranean and Alpine climates. After centuries of foreign occupation followed by decades of oppressive communist rule, Albania is embracing democracy and capitalism. Although it is a poor, developing nation, today Albania has Europe's fastest growing economy. While Albania has numerous small cities of historical or archeological interest, the capital, Tirana, is a bustling metropolis with heavy traffic and chaotic construction, but also with cultural activities, museums, good restaurants, cafes and nightlife.

Albania has many needs, and in addition to environmental projects, we are planning projects in education, tourism and business. For example, we will work with the Harry Fultz School, a pre-engineering high school in Tirana, to introduce programs such as robotics or game design. An example of an agro-business project involves the sustainability of harvesting medicinal herbs from Albania's forests, as this is an expanding industry. We also expect to work with the Ministry of Tourism and with private groups such as the Albanian Rafting Group.

BUDAPEST PROJECT CENTER – MQP

Director: Prof. G. Sarkozy, Fuller Labs 244

Hungary has gone through a deep-rooted transformation since 1989, and today it is a free and democratic country with a smoothly working market economy. The country has enjoyed a steady GDP growth, a bullish stock market and a decreasing inflation rate as well. As a result of these changes Hungary

became a full member of the European Union on May 1, 2004. Hungary is a link between Eastern and Western Europe. New investment is revitalizing the country, and grand old Budapest is being restored. It's the country's cultural, political, intellectual, and commercial heart – and it teems with cafés, restaurants, markets, and bars. Budapest offers breathtaking Old World grandeur and thriving cultural life. Situated on both banks of the Danube River, the city unites the colorful hills of Buda and the wide, businesslike boulevards of Pest. The city is simultaneously peaceful and bustling, a big metropolis and yet friendly, it treasures the old and embraces the new. These days with all the changes happening, Budapest is one of the most exciting places in Europe.

These CS MQPs will be at the Computer and Automation Research Institute in Budapest. This Institute is the national research center in Hungary for information technology, computer science and their related fields. In addition to pursuing basic and applied research, system design and system integration, consulting and software development are also among the activities of the Institute. The Institute puts a special emphasis on education related activities; it is closely affiliated with several Hungarian and European universities, including the Budapest University of Technology and Economics and the Eotvos Lorand University of Sciences, Budapest.

DENMARK PROJECT CENTER – IQP

Director: Prof. S. Taylor, Washburn Shops 210

The IQP project sites are in or near Copenhagen, the capital of Denmark, located on the island of Zealand. The Danish population numbers 5.3 million and inhabits an area of 16,630 sq. miles. In addition to farming, Denmark has a diverse and highly technological industry, with emphasis on electronics, pharmaceuticals, shipbuilding, furniture craft and alternative energy sources. The Danish culture is very open to interdisciplinary academic questioning, the foundation of every IQP. Danes are brought up to question and debate the impact of technology on the quality of life and are leaders in utilizing the positive aspects of modern technology while trying to lessen its negative impacts.

IQP projects in Denmark span a wide range of topics, with an emphasis on environmental issues and technology for people with disabilities. Alternative transportation, food quality, technology to assist visually impaired people with disabilities are all topics of great interest to both the public and private sector. Not-for-profit agencies are also expected to sponsor several future projects.

LONDON HUMANITIES PROGRAMS

Coordinator: Prof. K. Boudreau, Salisbury Labs 129

WPI offers Humanities and Arts Projects in London during Term E. London Humanities and Arts Projects are interdisciplinary and intended for students with many backgrounds in the humanities and arts. London was once the center of a global empire and its influence continues to radiate throughout the British Isles and well beyond. Humanities and Arts students in London study topics that might include history, literature, music, theatre, or culture, and work on projects that build on at

least three previous courses in humanities and arts. The London Humanities and Arts experience is not limited to the history or literature of Britain, but all projects take advantage of the unique resources available in London. These include some of the world's most vibrant theatre and the arts, outstanding museums, ambitious architecture, the libraries of the University of London, collections of film or sound recordings, and much more.

London Humanities and Arts Projects are appropriate for students with a background in art history/architecture, drama/theatre, history, literature, music, philosophy, religion, or writing/rhetoric. Students planning a minor or major in International Studies, Humanities and Arts, or Technical Scientific, and Professional Communication, also may study in London in conjunction with this program.

LONDON PROJECT CENTER – IQP

Co-Directors: Prof. R. Krueger, Project Center
Prof. D. Golding, Project Center

Students at the London Project Center spend seven weeks in one of the world's finest capital cities. Some of the best theater and museums are found here, as well as neighborhood pubs where relaxation, music and conversation are an age-old tradition. A vibrant city, which has undergone rapid change, today London is known for its diverse cultures and interests – truly a city for everyone. This juxtaposition of past and present, tradition and modernity makes London a city with much to offer.

At the London Project Center, students complete IQPs while working with a wide variety of agencies. Recent or current project sponsors include Her Majesty's Tower of London, the Victoria and Albert Museum, the Museum of Science and Industry, the Association of Chief Executives of National Voluntary Organizations, and the London Boroughs of Merton, Lewisham and Brent.

LONDON WALL STREET PROJECT CENTER – MQP

Co-Directors: Prof. A. Gerstenfeld, Washburn Shops 212
Prof. I. Morgan

Wall Street Project Center students are assigned to one of two locations – New York and London. Both of these cities are high-powered centers of global financial activity, vibrant art and entertainment scenes, and world-class multi-cultural cuisine.

There is a need for WPI projects involving Computer Science, Electrical and Computer Engineering, Management, Industrial Engineering, and Mathematical Sciences. Some of our projects include work-flow analysis, risk analysis (country risk limits), system usability, and data-base corruption issues. Other projects include user on-line functionality, and user help functions for global settlement systems. The projects are challenging and important to the clients as well as to the students. The Wall Street Project Center presents opportunities for MQP projects and possible future employment with some of the best firms in the world, such as Bank of America, Barclays Capital, Deutsche Bank, and BNP Paribas. Each of the project sponsors has needs for young, bright persons, with interests in technology and investments.

MOSCOW PROJECT CENTER – IQP and MQP

Director: S. Nikitina, Salisbury Labs 35

Spanning a wide expanse of Europe and Asia, all of 12 time zones, Russia is the largest country in the world in terms of land mass, natural resources and opportunities for economic and technological growth. Students at the Moscow Project Center have a unique opportunity to become acquainted with the people of Russia (both in Moscow and Saint-Petersburg) and to help address local problems by working on a variety of technological, cultural and environmental projects. A Term in Moscow is pleasant and bountiful and offer great opportunities for WPI students to explore the city and the countryside, sample Russian achievements in space exploration, see the museums and sites of the Kremlin and marvel at ingenious design of bridges and fountains of Saint Petersburg.

WPI students will work in multicultural work settings on projects proposed by local nonprofit organizations, universities, and governmental and non-governmental organizations. While most projects take place in the city of Moscow, some offer the opportunity to experience life outside the capital or engage in data collection in Saint Petersburg. Prospective project themes include marketing, industrial safety, and preservation of natural and cultural heritage sites.

NANCY PROJECT CENTER – MQP

Director: Prof. T. Camesano, Goddard Hall 218B

Nancy, France is a medieval city of about 350,000, located in the heart of the beautiful Lorraine region. The city is well connected by train to Paris, Frankfurt, and Brussels (each about 200 miles), and Luxemburg (75 miles). The “vielle ville” (old city) region of Nancy is known for its small streets, beautiful mansions, museums, and historic walks. There is a large student population, as well, and Nancy offers plenty of sports, concerts, movies, shopping, and eating places that are of interest to students.

The projects will be done in collaboration with the chemical engineering school of the Institut National Polytechnic de Lorraine (INPL), and l’Ecole Nationale Supérieure des Industries Chimiques (ENSIC). The projects will take place in one or more of the following: Laboratoire de Chimie Physique Macromoléculaire (LPCM, Physical Chemistry of Macromolecules), Département de Chimie Physique des Réactions (DPCR, Physical Chemistry of Reactions), Laboratoire de Thermo-dynamique des Séparations (LTS, Thermodynamics and Separation Processes), or Laboratoire des Sciences du Génie Chimique (LSCG, Chemical Engineering Sciences). Projects are chosen based on consideration of the interests and majors of the applicant students. Typically, we have a project in polymeric drug delivery/nanoparticles, biofilms in bioreactors, and in development of fuel cells. Examples of past project titles include “Polymer Stabilized Emulsions for Drug Delivery” and “Biofilm Development and Characterization”.

VENICE PROJECT CENTER – IQP

Director: Prof. F. Carrera, Project Center

Called the most beautiful city in the world, Venice features a haunting atmosphere which exudes the splendor of its past. A city without cars, yet with an outstanding historical, artistic, and architectural heritage, much of its uniqueness comes from its symbiotic relationship with the sea and the lagoon. Yet, despite its millenary history, the historic city of Venice is trying to adapt to our XXI century lifestyles, while preserving its environmental, artistic and cultural heritage. The rising cost of living in Venice has led to a dramatic exodus of its population which decreased since WWII from about 200,000 to around 60,000, while tourism has ballooned to 12 million visitors per year. Venice is a microcosm that reflects and magnifies many of the issues confronting the rest of the world, and at the same time it is a place that will allow you to experience a unique – more relaxed – pace of living.

Since the founding of the VPC in 1988, the IQPs in Venice provide an opportunity for students to see the implementation of their projects for the benefit of an entire city. Projects are conducted for Venetian, American and international organizations and include environmental, socioeconomic, artistic, cultural, and technical concerns important to the revitalization of this historic city. The over 120 projects completed in Venice include: studies on aspects of the Canals of Venice; which resulted in the publication of a book under the auspices of UNESCO; a number of projects on the preservation of Venetian art; several environmental studies on the lagoon ecosystem, which are contributing to the creation of a Lagoon Park; a variety of projects for the improvement of the urban quality of life in the city and the lagoon islands, which have resulted among other things, in the re-engineering of the Venetian cargo delivery system and the design of a vacuum sewer system to prevent discharges in the city’s canals.

PROGRAMS IN AFRICA

CAPE TOWN PROJECT CENTER – IQP

Director: Prof. S. Jiusto, Project Center

Cape Town is located at the southern tip of South Africa and is one of the world’s most beautiful cities. Situated between the Atlantic and Indian Oceans, the Table Mountain range runs through the city and down the Cape of Good Hope. It is both a very cosmopolitan city with visitors and residents from around the globe, and a city dealing with problems of poverty and rapid urban growth that many developing nations face. South Africa is a culturally diverse country still very much creating a new future for itself in the aftermath of apartheid. Cape Town offers music, art and theatre, and is home to many important historical and cultural sites.

Cape Town projects focus on sustainable community development in historically disadvantaged communities, including informal settlements where people live in shacks, without adequate provision of basic services. In the past, we have conducted exciting projects with local partners on themes such as sustainable water and sanitation, energy, early childhood

development, micro-business, multimedia communications, urban planning and mapping, and sport and recreation. Students often work closely with community members and other teams to share insights and plan innovative, integrated solutions. Some projects involve hands-on construction activities.

MOROCCO HUMANITIES PROGRAM

Coordinators: Prof. W.A. Addison, Salisbury Labs 238
Prof. T. El-Korchi, Kaven Hall 101

Students will study at Al Akhawayn University (AUI), located in Ifrane, Morocco. Ifrane is 120 miles east of Morocco's capital, Rabat, and 35 miles from the historic imperial cities of Fes and Meknes – cities famous for their revered mosques and colorful Berber migrants. With a population of about 15,000, Ifrane is a peaceful resort and recreational village in the foothills of the Atlas Mountains, known for its French colonial architecture as well as a royal palace. Al Akhawayn University is a semi-private, English-speaking university founded by King Hassan II of Morocco and King Fahd of Saudi Arabia. Since about half the faculty hold American graduate degrees, AUI resembles in some respects an American university.

Two-thirds unit of AUI courses will be devoted to the history of the Arab World, Islamic Civilization, and contemporary issues in North Africa. One-third unit will be an independent study project based upon course work and upon tours to Moroccan historic and cultural sites under the supervision of the on-site advisor. These projects may focus upon a variety of areas, including history, religion, art and architecture, as well as contemporary socio-political issues, with the goal of providing greater understanding of Arab and Muslim peoples. The unit of work will either be credited towards meeting the Humanities and Arts Requirement or can be credited toward a Humanities and Arts or International Studies minor or major.

MOROCCO PROJECT CENTER

Co-Directors: Prof. W.A. Addison, Salisbury Labs 238
Prof. T. El-Korchi, Kaven Hall 101

Students will reside at Al Akhawayn University (AUI), located in Ifrane, Morocco. Ifrane is 120 miles east of Morocco's capital, Rabat, and 35 miles from the historic imperial cities of Fes and Meknes – cities famous for their sacred mosques and colorful Berber inhabitants. With a population of about 15,000, Ifrane is a peaceful resort and recreational village in the foothills of the Atlas Mountains, known for its French colonial architecture as well as a royal retreat. AUI is a semi-private, English-speaking university founded by King Hassan II of Morocco and King Fahd of Saudi Arabia.

IQP projects address issues of water conservation and alternative agriculture in the Middle Atlas countryside, promoting eco-tourism, developing the artisanal industry in textile weaving and mosaic tiles, restoration of historic Kasbah in Fes and Rabat and Roman ruins at Volubilis, financial support for orphans.

NAMIBIA PROJECT CENTER – IQP

Director: Prof. C. Peet, Project Center

Namibia is a southern African nation of extensive national parks, deserts, seaside ports, livestock farms, and towns, with an excellent infrastructure of maintained roads, clean water, and good services. Students will live in Windhoek, the modern capital city. They will work in the city as well as other parts of the country. There will be an opportunity to visit national parks and other tourist attractions and a limited opportunity to become familiar with African rural life.

Namibia's well-developed government agencies at both the national and municipal levels will sponsor many of the projects, and these projects will generally focus around issues of sustainable development. In particular, projects typically investigate alternative energy sources, improved water and sanitation management, improved preventive health education, low-income housing, micro-level income generating activities and tourism development. Local towns and peri-urban informal settlements will be the venue of some of the projects. No prior knowledge of Africa is needed, but the preparation will include a heavy commitment to learning about the culture of Namibia in addition to preparing specifically for the projects

PROGRAMS IN ASIA

BANGKOK PROJECT CENTER – IQP

Director: Prof. R. Vaz, Project Center

Prof. S. Tuler, Salisbury Labs 201

Situated in the heart of Southeast Asia, Thailand presents many of the opportunities and challenges common to developing nations. Students at the Bangkok Project Center have a unique opportunity to become acquainted with the people of Thailand and to help address local problems by working on a variety of social and environmental projects. Some projects provide the opportunity to work with underserved communities, and some give students the opportunity to experience life in the countryside. Despite its challenges, Thailand is intensely beautiful: a land of gilded temples and golden beaches. The Thai people are among the friendliest and most hospitable in the world and have a great talent for enjoying life. Accommodations on the prestigious Chulalongkorn University campus position WPI students to meet Thai students and to explore the city's many attractions.

WPI students work in multicultural project teams along with students from Chulalongkorn University on IQPs sponsored by local nonprofit organizations, universities, governmental and non-governmental organizations. Projects are conducted on a wide variety of topics and are arranged in advance through resident coordinators in Bangkok. Project themes often center on health and human services, community development, sustainable development and appropriate technology, and environmental issues.

HONG KONG PROJECT CENTER – IQP

Director: Prof. C. Peet, Project Center

The Project Center in Hong Kong provides a gateway to the most dynamic and important region on the planet. The wealth of the world is moving to Asia, and Hong Kong plays a crucial role in the development of China – currently the most significant economy in Asia. This city radiates energy as it rapidly modernizes and takes the lead in economic development, high-rise building, efficient transportation, artistic expression, educational reform and environmental conservation. Students will live in furnished apartments with small kitchens, with 1-3 students in each apartment, in a typical Chinese residential neighborhood, quite different from typical tourist areas of Hong Kong.

In Hong Kong WPI works with a number of educational, social service, policy and environmental organizations and institutions. Hong Kong University of Science & Technology (HKUST), Hong Kong Polytechnic University (HKPU), Hong Kong Institute of Education (HKIEd), Chinese University of Hong Kong (CUHK) and Lingnan University (LU) have sponsored projects, while other sponsors have included Friends of the Earth, Hong Kong Council of Social Service, Caritas Francis Hsu College, Caritas Charles Vath College, Worldwide Fund for Nature (WWF), Civic Exchange, Designing Hong Kong, Business Environment Council, Jets Technics, Hong Kong Maritime Museum and the Hong Kong History Museum. Examples of past projects include an evaluation of an English language educational software program developed to help Chinese students improve their English writing skills, evaluating how to increase recycling of beverage containers and vehicle tires, identifying how to reduce light pollution, understanding the impact of educational reforms that are occurring in Hong Kong, evaluating how to best improve library usage and information literacy among secondary school students, investigating how to make Hong Kong's fishing industry more sustainable and evaluating how best to develop the waterfront and marine areas of Victoria Harbour.

SHANGHAI, PEOPLE'S REPUBLIC OF CHINA – MQP

Co-Directors: Prof. S. Zhou, Gateway Park,
Prof. D. DiBiasio, Goddard Hall 127

Shanghai draws the attention of the whole world as the largest base of Chinese industrial technology, the important seaport and China's largest commercial and financial center. Shanghai is situated on the estuary of the Yangtze River of China. Covering an area of 5,800 square kilometers (2,239 square miles), Shanghai has a population of 18.7 million, including 2 million floating population. Modern Shanghai has three key areas of interest to the visitor. These comprise sightseeing, business and shopping centered upon People's Square and along the Huangpu River.

The projects will be performed in collaboration with the School of Environmental Science and Engineering, SJTU. Possible projects include: Microbial clogging processes in porous media; Application of hollow fiber membranes in water

treatment plants; Evaluation and application of fluid regimes in reverse osmosis membrane modules; Calculation and evaluation of fluid fields in bioreactors for waste water treatment (computational hydrodynamics); Application of immobilization bacteria for ammonia removal in drinking water (experiment and project design); Preparation of self-organized TiO₂ nanotube arrays and its photoelectrochemical applications; Pollutant evolution recorded in the sediment from the Dianshan Lake, Shanghai; Occurrences and characteristics of the emerging contaminants-PPCPs in water environments; Detection of organic acid in surface water using ion chromatography; optimization and software design for waste water treatment; Deep treatment processes and nitrogen removal for landfill leachate; Charged ultrafiltration membranes for natural organic matter removal in water.

CHINA – MQP

Co-Directors: Prof. Y. Rong, Washburn Shops 307T,
Prof. A. Zeng, Washburn Shops 308

As the manufacturing industry becomes more and more global, many research, design, and manufacturing activities go to China. To experience working with professionals from different backgrounds and in a different cultural environment, WPI students work in mixed teams with students from Huazhong University of Science and Technology (HUST), Wuhan, Southeast University, Nanjing, and Beijing Jiaotong University, all in China. All three universities are major comprehensive universities in China with excellent engineering programs. The three cities are large and industrialized cities in China, with a rich cultural heritage and easy access to Beijing and Shanghai, as well as other cities, by train or airplane. Students will stay on campus and may travel to other cities based on the project sponsor location and the project requirements. Students will have a chance to merge into Chinese culture and experience daily life in China.

Projects will be conducted at one of the three universities. WPI students will work with Chinese students from one of the universities in mixed teams, with co-advisors from both WPI and the university. These projects are real world problems and are sponsored by global companies with China operations, such as UTC, Caterpillar, and Amphenol TCS, and institutions in the areas of mechanical product and system design, robotics, manufacturing processes, environmental engineering, supplier chain management, and lean manufacturing implementations.

JAPAN PROJECT CENTER – MQP

Director: Prof. R. Lindeman, Fuller Lab B24a

The Kansai region of Japan is home to three large cities, Osaka, Kobe, and Kyoto. Osaka is Japan's third-largest city, and provides an eclectic mix of old and new. Kansai is a convenient launching point for travel to other parts of Japan. The location of the project site is at Osaka University, which is within an hour of both Kyoto and Kobe, and about one hour from Nara, another former Japanese capital and cultural center.

Current projects will involve work in the areas of interactive information systems (e.g., public displays) and other "Cybermedia" applications, and will be conducted within various depart-

ments at the university. Projects run from about mid-June through A Term, so total time in country is about four months. This will give participants a much richer experience in Japan, and allow the teams sufficient time to produce outstanding work. The first part of the project will be considered as an internship, while the actual MQP will take place during A Term.

INDIA PROJECT CENTER – IQP

Directors: Prof. I. Shockey, Project Center

Mandi, India is located in the northwestern foothills of the Himalaya in Himachal Pradesh. In this quiet valley, the IIT-Mandi is one of the newest additions to illustrious Indian Institute of Technology family, premier Institutions of National Importance in India. It is the only IIT in the Himalayas, set within a community of 60,000 with a 500-acre campus in a serene river valley. WPI is the proud recipient of a US Department of State grant that will support our groundbreaking collaboration with WPI IQP students hosted at the IIT in India beginning in 2013.

IQPs in Mandi, India will involve diverse collaboration with the IIT students and faculty, with community agencies, and with NGOs on issues of local interest. Likely topics will feature the social and environmental dimensions of city infrastructure, rural resources including land use and water quality, and community resilience in mountain regions.

PROGRAMS IN LATIN AMERICA

ARGENTINA HUMANITIES PROGRAM

Coordinator: Prof. A. Madan, Salisbury Labs 03

Along with its Spanish origins, Argentina's economic ups and downs illustrate its shared ancestry with neighboring Latin American countries, yet its capital's French architecture and Italian influences reveal a storied and gloried past. The locals of Buenos Aires, known as porteños, are equally proud and frustrated that their city is known as the Paris of South America. Known for its unique neighborhoods, its urban feel, and its sing-songy Spanish, Buenos Aires offers students an easily navigable environment in which to improve their Spanish and their cultural knowledge through daily classes at the renowned language institute Escuelas y Centros de Español en Latinoamérica (ECELA). During the week, students reside with local Argentine families. These families have been vetted by ECELA, and their homes are conveniently situated near the institute and alongside ample public transportation.

The Buenos Aires Language and Culture Immersion provides a unique opportunity in Term E to coalesce language and culture in the real-world setting of Argentina. By taking language classes in the morning and then speaking and learning about culture in the afternoon, students see measurable improvements in their language skills through the four-week immersion. They learn to navigate a foreign city while also becoming proficient in daily Spanish-use – in other words, the Spanish required for real settings – to order food, to drop off

laundry, or to purchase a calling card. Students reflect on their experiences with the language and the culture in a class blog and in personal journals. Additionally, they are quizzed weekly on assigned readings and cultural excursions, while ECELA tests students on their language skills. In the final three weeks of the course – back in the United States or anywhere they have access to a library and Internet – students are required to craft an independently designed research paper that relates to Argentine literature, culture, history, or film.

COSTA RICA PROJECT CENTER – IQP

Director: Prof. S. Vernon-Gerstenfeld, Salisbury Labs

Costa Rica is a land of contrasts: banana plantations, flaming volcanoes, misty black sand beaches and a thriving modern capitalist economy. A remarkably stable country, politically and economically, Costa Rica offers an opportunity for students to become immersed in a Central American culture where democracy, economic development, and concern for the environment are a permanent part of the landscape. Students stay in the capital city of San José, but ample opportunity is found to visit the country's attractions. Many projects have fieldwork associated with them.

Costa Rica's unique environment provides students opportunities to focus on environmental conservation and sustainable development by working with government agencies dedicated to those issues and with selected museums and private organizations. Prior knowledge of Spanish language is not required for participation. All students, however, must complete a two-week intensive language program on site. Those who have some Spanish skills will greatly improve them.

PANAMA CITY – MQP

Director: Prof. T. El-Korchi, Kaven Hall

The Republic of Panama is situated at the heart of the American continent. Panama forms a link between Central and South America, constituting an isthmus 80 km wide at its narrowest point. The country has over 3 million residents, with one-third living in the capital, Panama City. World-famous for the engineering marvel of the Panama Canal, today Panama City is the most cosmopolitan capital in Central America. The city has seen significant growth and is known for international shipping and banking, transportation, insurance, warehousing, and sales. The combination of colonial ruins, modern high-rise office buildings, luxury homes, and squatters' slums reflects the blend of cultures, eras, and economic levels that are found in the city.

Projects will be completed in the Environmental and Civil Engineering areas. Sponsors will include various government and private organizations in Panama City. These may include the Autoridad del Canal de Panama, SENACYT (the national organization for Science, Technology and Innovation), and private consulting and contracting firms.

PUERTO RICO PROJECT CENTER – IQP

Director: Prof. L. Mathews, Life Sciences and Bioengineering Center, 4006

The Puerto Rico Project Center offers an opportunity to be immersed in a Caribbean culture that is a unique and harmonious blend of Spanish and North American influences found nowhere else in the world. Located in San Juan, the Center offers the attractions of a large metropolitan area within easy reach of El Yunque national rain forest, white sand beaches, historic El Morro Spanish fortress, Arecibo Observatory, and many other sites of interest.

Projects are completed in teams and span a wide variety of topics including the environment, public health, housing, social welfare, transportation, and land use. Sponsoring agencies have included many offices of the government of the commonwealth as well as local industries.

PROGRAMS IN THE SOUTH PACIFIC

AUSTRALIA PROJECT CENTER – IQP

Director: Prof. H. Ault, Higgins Labs 207

Melbourne, situated along Australia's southeast coast, is the country's second largest city. A city of parks and gardens, specializing in arts festivals, sporting events, and fine dining, it was voted "the world's most livable city" in an international survey. Melbourne, Boston's sister city, is also a fine place from which to explore the diversity of Australian life; only a short distance from mountains, deserts, beaches, mining towns, and extensive parklands and wildlife reserves.

IQPs involve outreach to the Australian public on issues or topics regarding science, technology and society. The projects usually focus on disabilities, fire protection or the environment

NEW ZEALAND PROJECT CENTER – IQP

Co-Directors: Prof. I. Shockey, Project Center
Prof. M. Elmes, Washburn Shops 203

Wellington is the capital city of New Zealand and the third most populous urban area in New Zealand (metropolitan population around 390,000). It is situated on Wellington Harbor, on the southwestern tip of the North Island, between the Cook Strait and the Rimutaka Range. It houses Parliament, the head offices of all Government Ministries and Departments as well as most of the foreign diplomatic missions. It is also a cultural center with many museums (including Te Papa Tongarewa, the Museum of New Zealand), a vibrant film and theater industry, symphony and ballet companies, and the biennial New Zealand International Arts Festival. Overall, it is a pedestrian-friendly city, with boardwalks, coffee shops, cycling, kayaking and beautiful scenery within range of the student housing. It has consistently ranked high on several indices of quality of living.

IQPs in Wellington involve diverse collaboration with government organizations and with NGOs in New Zealand on issues related to environment, technology and society. 2013 Projects focus on environmental issues (endangered species at Zealandia, a conservation wildlife area; tsunami emergency planning), museums (visitor engagement analyses and exhibitions), innovation and entrepreneurship for the greater Wellington region, and outreach for a community radio station at Victoria University.

INDIVIDUALLY SPONSORED RESIDENTIAL PROJECTS (ISRPs)

Students and faculty members have the freedom to expand their project opportunities with individually sponsored residential projects (ISRP). Through the ISRP program – and with the support of a faculty advisor – students may participate in custom off-campus projects in addition to the established options available at WPI Project Centers. All such programs must adhere to risk management protocols such as those developed and implemented at established project centers. The WPI Provost's Office has developed a risk-management protocol to be completed by faculty members planning to advise students pursuing off-campus ISRPs for academic credit. Otherwise, students, faculty, and WPI are exposed to unnecessary risk.

The Provost's Office requires completion of the following risk management protocol by all faculty intending to advise students who will earn academic credit while in residence off-campus in individually sponsored projects.

1. Two terms in advance of the off-campus activity: Faculty advisor sends a letter of intent to the Provost's office (with a copy sent to Anne Ogilvie in the IGSD). The letter describes the scope of the anticipated project, where it will happen, how many students will participate, and the term that the students will be off-campus.
2. Ten weeks prior to departure: Faculty advisor completes and submits a completed ISRP form to the IGSD. The ISRP form is co-signed by the academic department head (MQP) or Dean of IGSD (IQP). A budget should also be submitted at this time, so that financial aid can be reviewed for students undertaking these projects). At this time a signed Transcript and Judicial Release Form must be submitted for each potential student participant
3. Eight weeks prior to departure: All students expecting to participate in an ISRP should be in good academic standing at this time. WPI reserves the right to withdraw acceptance to students who are subsequently placed on academic warning. Students placed on academic probation are not eligible to participate. Upon review of academic and judicial records for each student the IGSD will inform the advisor of students who may be disqualified due to poor academic performance or judicial history at WPI.
4. Six weeks prior to departure: Student participant(s) submit the following forms to the faculty advisor: the Acknowledgement of Voluntary Participation, the Off-Campus Students' Health Update and Records Release Form, and the WPI Off-Campus Travel Information Form.

5. Five weeks prior to departure: The advisor submits these completed forms (item 3) to the IGSD. Please note that all forms can be found at the IGSD Web site:
<http://www.wpi.edu/academics/igsd/gpp-forms.html>

Project registration will not be complete until the conditions of this protocol are met.

At the completion of step 2, WPI's risk managers will review the information provided and make a recommendation to the Dean of IGSD, who will assist the Provost in making a final

decision to approve or disapprove the activity based on risk management considerations. The faculty advisor will learn of this decision no later than the first day of the term preceding the proposed activity.

Final approval is always contingent upon submission of completed required forms by the student participants. Registration forms may not be signed until each student turns in their completed paperwork.

	E Term Away	A Term Away	B Term Away	C Term Away	D Term Away
Proposal made to Provost's Office	By January 10th	By March 10th	By May 10th	By September 10th	By November 10th
Completed ISRP form submitted to the IGSD	By March 15th	By June 20th	By August 25th	By October 25th	By January 5th
Completed Health & Safety Forms for each student submitted to the IGSD	By April 20th	By July 25th	By September 25th	By December 5th	By February 5th

ON-CAMPUS IQP PROGRAMS

CENTER FOR INVESTMENT, RISK MANAGEMENT AND TRADING

Director, Professor H. Hakim, Atwater Kent 231

The center offers IQPs in the areas related to investment. The projects will be designed with the involvement of the students and a focus in the areas of special interest to each project team. The projects will expose the students to broad areas such as accounting and corporate finance and will teach them the role of fundamental and technical analysis in the development of plans for investment and trading. The project could be focused on specific asset classes such as stocks, bonds, futures, or foreign currency; or derivatives such as options. The students could also do projects in the areas of risk management, analysis of portfolios, or development of algorithms for trading. For more specific information, you can contact Prof. Hossein Hakim.

CENTER FOR SUSTAINABLE FOOD SYSTEMS

Prof. R. Hersh, Project Center

Responses to food insecurity usually focus on the individual and household level through food assistance and social welfare programs. By contrast, community food security emphasizes access to and availability of food at the community level, local/regional food systems within a sustainable global continuum, and greater food self-reliance.

In this set of on-campus IQPs students will work collaboratively with community groups, public health agencies, farmers, ecological designers, and organizations involved in regional food planning to: 1) improve access to healthy food in low income and minority neighborhoods in central Massachusetts and regionally; 2) create closer links among food system activities (production, processing, distribution, consumption, waste disposal) 3) catalyze food business opportunities (e.g., urban farms, food processing, community kitchens, composting services) in these communities; and 4) collaborate with farmers on innovative designs for small scale food production (e.g., bioshelters, grain harvesters, vertical farms). For more information, please contact Prof. Robert Hersh (hersh@wpi.edu).

OVERVIEW

The Humanities and Arts Requirement empowers students to meet the broad educational goals of WPI. The balance between technological and humanistic education and the emphasis on inquiry-based approaches to student learning have been and remain hallmarks of a WPI education. In concert with WPI's other degree requirements, the Humanities and Arts Requirement embodies the institute's definition of an educated person. The Humanities and Arts Requirement engages students with theory and practice – *Lehr und Kunst* – through the following educational goals.

GOALS OF THE HUMANITIES AND ARTS REQUIREMENT

- to introduce students to the breadth, diversity, and creativity of human experience as expressed in the humanities and arts;
- to develop students' ability to think critically and independently about the world;
- to enhance students' ability to communicate effectively with others in a spirit of openness and cooperation;
- to enrich students' understanding of themselves;
- to deepen students' ability to apply concepts and skills in a focused thematic area through sustained critical inquiry;
- to encourage students to reflect on their responsibilities to others in local, national and global communities;
- to kindle in students a life-long interest in the humanities and arts.

MEETING THE REQUIREMENT

Students fulfill the humanities and arts degree requirement by completing two units of work consisting of five student-selected courses followed by a 1/3 unit Inquiry Seminar or Practicum (HU 3900, HU 3910, or equivalent). In selecting the courses, students must complete depth and breadth components of the requirement, as described below. At the end of the Inquiry Seminar or Practicum, every student will submit a completion-of-degree requirement form (CDR) to certify completion of the requirement.

DEPTH COMPONENT:

The WPI Plan calls for students to develop a meaningful grasp of a thematic area of the humanities and arts. *To ensure this depth, students complete at least three courses of thematically-related work prior to a culminating Inquiry Seminar or Practicum in the same thematic area.* Thematically-related work can be achieved in two ways:

1. Focusing on one of the following disciplines or disciplinary areas:
 - art/art history (AR)
 - music (MU)
 - drama/theatre (EN/TH)
 - literature and writing/rhetoric (EN, WR, RH)
 - history and international studies (HI, HU)
 - philosophy and religion (PY, RE)

Paths for foreign language study are described below.

2. Defining the thematic area across disciplines or disciplinary areas in consultation with a Humanities & Arts faculty member.

To ensure that students develop a program of increasing complexity, at least one of the three thematically-related courses that precede the Inquiry Seminar or Practicum must be at the 2000-level or above. Students are strongly encouraged but not required to include a 3000-level course within their depth component. The structure of the requirement remains flexible so that students will become intentional learners as they select a sequence of thematically-related courses.

BREADTH COMPONENT:

To ensure intellectual breadth, before taking the final Inquiry Seminar or Practicum, students must take at least one course outside the grouping in which they complete their depth component. To identify breadth, courses are grouped in the following manner:

- art/art history, drama/theatre, and music (AR, EN/TH, MU);
- foreign languages (SP, GN, AB, CN);
- literature and writing/rhetoric (EN, WR, RH);
- history and international studies (HI, HU);
- philosophy and religion (PY, RE).

WPI offers a flexible curriculum to entrust students with a significant amount of choice and responsibility for planning their own course of study. At the same time, WPI requires students to take at least one course outside the depth area in order to provide exposure to more than one disciplinary approach within the arts and humanities, which include the creativity of the fine and performing arts, modes of communication in languages and literature, and the cultural analysis of the past and present. Students are encouraged to experiment and to take courses in more than one group outside the depth area if they wish. By providing exposure to multiple areas, the breadth component encourages students to appreciate the fundamental unity of knowledge and the interconnections between and among diverse disciplinary fields.

The one exception to this breadth requirement is that students may take all six courses in a foreign language.

DEPTH AND BREADTH COMPONENTS IN FOREIGN LANGUAGES:

Development of proficiency in a foreign language necessitates sustained engagement in the language beyond the elementary and intermediate level. Foreign language instruction is broadly interdisciplinary and includes elements of the history, literature, and culture of a particular language area. A student in foreign languages must still meet the depth component of the requirement by taking 6 courses in the foreign language, one of which is approved as the final Inquiry Practicum or Seminar. Additional information about options for the Inquiry Practicum or Seminar in German (GN) and Spanish (SP) can be found later in this section. A student who begins foreign language study is not compelled to remain in that subject, but could choose to switch to another subject of study and complete the depth component in another thematic area.

INQUIRY SEMINAR OR PRACTICUM

The culmination of the depth component of the Humanities and Arts Requirement is an inquiry seminar or practicum. The educational goals for the seminar or practicum are the same regardless of the format.

OBJECTIVES OF THE INQUIRY SEMINAR OR PRACTICUM:

- *Critical inquiry*: to develop each student's ability to apply concepts and skills learned in the humanities and arts, the seminar/practicum offers opportunities to engage in sustained critical inquiry, analysis, or problem-solving in a focused thematic area.
- *Research and investigation*: to engage students in research, discovery, creativity, or investigation, the seminar/practicum provides opportunities for students actively and critically to seek and evaluate new information and insights using multiple sources. These opportunities need not necessarily be research papers.
- *Communication and writing*: to develop each student's ability to communicate effectively both orally and in writing, the seminar/practicum includes discussion of appropriate communications skills and provides opportunities to revise written work after receiving feedback from the instructor.
- *Intellectual independence*: to foster independence of thought, the seminar/practicum offers significant opportunities for individual, self-directed work.
- *Conversation and dialogue*: to promote individual reflection and the appreciation of diverse perspectives, the seminar/practicum consists of classroom activities other than traditional lecture to encourage discussion and collaborative learning in a spirit of openness, cooperation, and dialogue with peers. The thematic focus, structure, and assignments for each seminar or practicum are to be determined by each individual instructor to achieve these goals.

INQUIRY SEMINAR

The Inquiry Seminar, usually taken in the sophomore year, represents the culmination of the Humanities and Arts Requirement. The Seminar provides an opportunity for students to explore a particular topic or theme in the humanities in greater depth. The Seminar has two primary goals. The first is to foster independence of student thought, typically through some form of self-directed activity. The second is to encourage a cooperative, dialogic approach to inquiry, through open exchanges with peers in a small, intensive classroom setting (typically 12 students or fewer). Students learn how to frame questions in the context of a particular discipline or field of study, and to explore or investigate problems using methods appropriate to work in the humanities and arts.

As the student's capstone experience in the humanities and arts, the Inquiry Seminar is intended to help students take their knowledge of the humanities to a higher level. The purpose of the Inquiry Seminar, therefore, is not to provide a broad survey or general introduction to a given discipline, but to provide a structured forum in which students might approach a specific humanities-related problem or theme at a deeper, more sus-

tained level of intellectual engagement than would normally be possible within a traditional course setting. The pedagogical idea behind the Inquiry Seminar is that work in the humanities and arts is at once an intensely personal enterprise, in which the individual freely draws on her or his own particular interests, abilities, passions, and commitments, and at the same time a form of ethical community in which the practitioner is always in conversation with and accountable to others.

While the specific content and requirements of the Inquiry Seminar vary from instructor to instructor, all Inquiry Seminars incorporate self-directed learning as a significant part of the curriculum. It is the department's expectation, therefore, that by the time they enroll in the Seminar, students should have sufficient background in the humanities and arts to be able to work independently and to pose questions of their own. Students will be asked to research and write a term paper, to assemble a portfolio of writings or exercises, or otherwise to demonstrate their ability to pose a question of relevance to humanities inquiry, and to answer it. At the same time, the Seminars are designed to foster an atmosphere of intellectual collaboration and discovery. Students are required to participate fully in seminar discussion, to share the results of their own research or activities, and to engage the ideas and interests of their peers in a constructive and collegial way.

INQUIRY PRACTICUM

Students in the performing arts have the option to complete their Humanities and Arts sequence with an Inquiry Practicum in music or drama/theatre. A practicum shares the same goals and objectives of an inquiry seminar but provides students with a production/performance experience which emphasizes the hands-on, practical application of skills and knowledge gained from previous Humanities and Arts courses. Samples of practicums in music include composing, arranging, or performing a solo recital. Drama/Theatre students may choose to act, direct, or design for a campus production. In addition to weekly meetings, students may be required to attend rehearsals and performances. The design of the final project is determined through conversations between instructors and students. Due to the unique nature of the practicum, permission of the instructor is required to enroll in a practicum.

FOREIGN LANGUAGES: PRACTICUM OR SEMINAR

Students in foreign languages may complete the Humanities and Arts Requirement in one of the following three ways:

1. *Practicum in the sixth and final course in a foreign language.* The practicum will include evaluative components or exams to demonstrate overall language skills in four areas: listening, speaking, reading, and writing. The practicum will require students to demonstrate breadth of cultural knowledge of the language area. (Examples of practicum courses: GN 3512, GN 3515; SP 3522; SP 3527)
2. *Advanced language seminar after five previous courses in the foreign language.* The seminar will explore a thematic topic and provide opportunities for individual inquiry. (Seminar examples: GN 3513, GN 3514; SP 3523, SP 3524, SP 3525, SP 3526, SP 3528, SP 3529, SP 3530, SP 3531)

3. *Advanced language seminar after advanced-level language courses combined with courses from other areas of study.*
Students who demonstrate basic oral, written, and cultural knowledge of a foreign language in a placement test at the advanced level may combine courses from other areas for their requirement. (Seminar examples are the same as option 2.)

Option 1 and 2 require students to take six courses in a foreign language. For example, in option 1, a student without prior language training might begin with GN 1511 Elementary German I and conclude with a practicum in GN 3512 Advanced German II. In option 2, for example, a student might start with SP 2521 Intermediate Spanish I followed by five Spanish courses which culminate in one of the designated seminars. In option 3, students who demonstrate knowledge of the foreign language at the advanced level may mix courses from other areas in their course sequence. For example, a student might take two courses from history, philosophy, music, etc. along with four advanced Spanish courses which would culminate in a designated seminar. Students in all three options for foreign languages would be required to submit the same materials to demonstrate completion of the requirement as students whose culminating experience was an inquiry seminar or practicum in another area of the Humanities and Arts.

HUA FACULTY ARRANGED BY CLUSTER

Art/Art History, Drama/Theatre, and Music (AR, MU, TH)

Fred Bianchi (MU)
John Delorey (MU)
Richard Falco (MU)
Joseph Farbrook (AR)
Joshua Rosenstock (AR)
David Samson (AR)
Eunmi Shim (MU)
Erika Stone (TH)
Susan Vick (TH)
Douglas Weeks (MU)

Languages, Literature, and Writing/Rhetoric (EN, WR, RH, SP, GN)

Kristin Boudreau (EN)
Joel Brattin (EN)
Ulrike Brisson (GN)
Jim Cocola (EN, WR)
James Dempsey (EN, WR)
Jennifer deWinter (WR, RH)
David Dollenmayer (GN)
Michelle Ephraim (EN)
Brenton Faber (WR, RH)
Lorraine Higgins (WR, RH)
Kent Ljungquist (EN)
Aarti Madan Smith (SP)
Ingrid Matos-Nin (SP)
Wesley Mott (EN)
Svetlana Nikitina (HU, EN)
Ángel Rivera (SP)
Lance Schachterle (EN, WR)
Ruth Smith (WR)
Ryan Madan Smith (WR)

History, philosophy, and religion (HI, HU, PY, RE)

Bland Addison (HI)
William Baller (HI)
Steven Bullock (HI)
Constance Clark (HI)
Bethel Eddy (PY, RE)
Roger Gottlieb (PY)
James Hanlan (HI)
Peter Hansen (HI)
Thomas Robertson (HI)
Jennifer Rudolph (HI)
John Sanbonmatsu (PY)
Ruth Smith (PY, RE)
David Spanagel (HI)

AP CREDIT POLICY

The Humanities and Arts Department will accept a maximum of 1/3 unit of AP credit towards the Humanities and Arts requirement. Students who score a 4 or 5 on the AP test in German or Spanish automatically receive 1/3 unit of credit in the language, provided they do not begin German or Spanish study at WPI with Elementary German I (GN 1511) or Elementary Spanish II (SP 1523). Students who score a 4 or 5 on the AP test in studio art may be eligible for HUA credit, subject to a portfolio review by art faculty. Students who score a 4 or 5 on the AP test in other subject areas of the humanities and arts will receive credit in the relevant discipline. AP credit beyond one course (1/3 unit) in the Humanities and Arts may be counted toward other requirements such as free elective credit or particular majors and minors at WPI.

TRANSFER STUDENTS AND THE HUMANITIES AND ARTS REQUIREMENT

Students who transfer fewer than six Humanities and Arts courses from another institution must complete an inquiry seminar or practicum to complete the Humanities and Arts Requirement. Students who transfer six or more courses in Humanities and Arts will have the option of submitting a CDR form or engaging in additional work (or documentation of work) to earn an "A" on the CDR, in accordance with current transfer rules (see below).

All students may have the option of completing their Humanities and Arts Requirement while enrolled for 1 unit of coursework at an off-campus project center where one-third unit of the coursework shall include an inquiry seminar or practicum.

Transfer credit in the Humanities and Arts at WPI is granted on a course-for-course basis. All Transfer students entering WPI with *fewer than six courses or their equivalent of transfer credit in the Humanities and Arts* must complete work in the Humanities and Arts, including an Inquiry Seminar/Practicum to the extent that the overall Humanities and Arts credit totals two units.

No credit toward the Humanities and Arts Requirement is given for introductory-level foreign-language courses unless the entire program is in that foreign language. Usually only one transfer course in Freshman English can be applied toward the requirement. In all cases, the professor for the Inquiry Seminar/Practicum has the final decision on what courses are acceptable within the student's sequence leading up to the project. Up to one unit (i.e. three courses) of transferred work in the Human-

ties and Arts that is not credited toward the Humanities and Arts Requirement can be credited toward the fifteen-unit graduation requirement; such courses shall receive credit under the category of EL 1000.

If a Transfer student *has completed two units of acceptable college-level work in the Humanities and Arts prior to entering WPI*, a Completion of Degree Requirement form will be submitted by the Humanities and Arts Department Coordinator for Transfer Students at the request of the student. The grade for such a Humanities and Arts Requirement met by transfer credit is normally a grade of "CR". Students whose grades on transferred courses average A can engage in additional work or submit samples of their previous work and may be awarded an A for the Humanities and Arts Requirement. Alternately a transfer student may elect to undertake an Inquiry Seminar/Practicum in an effort to achieve an A grade. These evaluation options must be exercised prior to the Department's submission of the Completion of Degree Requirement form to the Registrar.

Decisions concerning credit toward the Humanities and Arts Requirement are made by the Humanities and Arts Coordinator for Transfer Students, Professor James Hanlan. He can be contacted in room 28 of Salisbury Laboratories, or at extension 5438, or email jphanlan@wpi.edu.

GUIDELINES FOR GRANTING TRANSFER CREDIT TO U.S. STUDENTS FOR FOREIGN LANGUAGE STUDY

A. Credit for study on the high school level:

1. Transfer credit of 1/3 unit is given for Advanced Placement with a score of 4 or 5.
2. Students with three or more years of foreign-language study in high school, but who have not taken the Advanced Placement examination in that language, may receive 1/3 unit credit for their high school language study upon satisfactory completion of two courses in the same language on the intermediate level or above. (Note: Courses in German and Spanish in addition to those offered at WPI, as well as courses in other languages, are available at other colleges in the Consortium.)
3. In either case 1. or 2. above, in order to receive 1/3 unit credit, students must begin their WPI course sequence at the Elementary II level or above.

B. Credit for study at other colleges and universities:

1. Language study which is done at other universities and colleges prior to entering WPI, or done with the prior written permission of the student's Humanities and Arts Consultant (not the Department Head) as part of an agreed-upon Humanities and Arts sequence, transfers on a course-for-course basis.
2. Language study which is done at foreign universities, language institutes, cultural institutes, etc., prior to entering WPI, or done with the prior written permission of the student's Humanities and Arts Consultant (not the Department Head) as part of an agreed-upon Humanities and Arts sequence, is assessed by the Foreign Languages Consultant on the basis of matriculation papers and the level of work accomplished.

OTHER OPTIONS

INTERDISCIPLINARY STUDY AT THE AMERICAN ANTIQUARIAN SOCIETY

A unique opportunity for interdisciplinary work in the humanities and arts is offered by the American Studies Seminar sponsored each fall by the American Antiquarian Society. Organized in collaboration with Worcester's five undergraduate colleges and universities, this seminar focuses on topics that allow students to investigate the Society's rich holdings in early American history, literature, and culture. The Society's unparalleled collection of documents is a short walk from the campus. Information on application deadlines and academic credit toward the Humanities and Arts Requirement is available from the WPI Campus Representative to the American Antiquarian Society.

OFF-CAMPUS HUMANITIES AND ARTS OPTION

WPI offers the option to complete the Humanities and Arts Requirement during one term of study at several Project Centers. Normally, students complete the requirement through at least six courses or independent-study projects on campus. However, the "Off-Campus" option allows students to combine at least three courses on campus with one term studying the humanities and arts at a Project Center. Since this one-term project is equivalent to three courses, students may use it to complete the requirement.

Off-campus projects are available in Germany for the study of foreign languages and in London and Morocco for other fields. These off-campus programs have a flexible format. Students devote themselves to one term studying the history, literature, language or culture at the project site with a WPI faculty advisor. The program might combine a thematic seminar in an area of the faculty advisor's expertise with visits to museums, the theatre, musical performances, or cultural excursions.

Although themes or areas of emphasis vary from year to year, all off-campus Humanities and Arts activities culminate in a written report in an area of interest to the student.

To be eligible for this one-unit activity, students must have already completed three courses in humanities and arts before they leave campus. Students may apply to the off-campus program before they have taken all three courses. However, students may not participate in the program unless they successfully complete one unit of work in humanities and arts before the term of the project. In addition, students going to any Project Center must complete all of the forms required by the Interdisciplinary and Global Studies Division. Requirements:

- Students must have completed at least three courses in the Humanities and Arts at WPI, or have earned equivalent course credit approved by the Humanities and Arts Department, before the term of the off-campus activity. The Department may allow students to count transfer or advanced placement credits toward the three course minimum;

- Students must be accepted into the off-campus Humanities and Arts program by the Humanities and Arts Department, and complete all forms required by the Interdisciplinary and Global Studies Division, in order to register for these projects.
- Students might be required by the faculty advisor to complete a PQP or attend required meetings before the off-campus project;
- Students must submit a written report or paper at the end of the project. Students also may be required to submit written updates at various times in the course of the project. In all cases, the faculty advisor at the project site will determine the precise form of the written requirements.
- Students may be required to give an oral presentation at the end of the project;
- Under normal circumstances, students must complete the project within one term in order to receive the full unit of credit;
- Only members of the Humanities and Arts faculty at WPI may advise off-campus Humanities and Arts projects.

OFF-CAMPUS RECOMMENDATIONS

All off-campus programs benefit from advance planning. Discuss the possibility of an off-campus activity with your academic advisor at the beginning of the freshman year. Consult with the WPI faculty who will advise these off-campus projects as early as possible, since they may be able to suggest useful courses or other background resources for the projects. Also keep in mind that three courses are the minimum required, but many students find it advantageous to take additional courses before going away.

The interdisciplinary London and Morocco programs are open to students with a background in areas of the humanities and arts besides foreign languages, including art history and architecture, drama/theatre, history, literature, music, philosophy, religion, or writing/rhetoric. After taking at least three courses in any of these areas on campus, you could then go to London to complete your project. Some students also have gone to London with this program to study beyond the Humanities and Arts Requirement for international studies, history, literature, music, theatre, or other areas.

WPI offers programs in the German language at Darmstadt. This program requires completion of foreign language courses through the level of intermediate II or above (2000-level or above) before going abroad. For students who have taken foreign language courses in high school, language placement exams are available during New Student Orientation. Some students with basic foreign language preparation have completed their arts projects in Germany. We welcome a creative approach to off-campus study.

More advanced students may participate in these off-campus programs by doing work toward a minor or major. A student who had already completed their Humanities and Arts Requirement on campus, for example, might be able to work in the humanities and arts on an Independent Study Project that could count toward a minor. Or a student at one of these sites could work on a Major Qualifying Project in fields such as Humanities and Arts, International Studies, or Professional Writing.

The Humanities and Arts Department advertises upcoming project locations and application deadlines at the Global Opportunities Fair each September. Future project opportunities might include other foreign locations or projects that provide the context for an intensive study of humanistic themes associated with particular locales within the United States. Contact the Department of Humanities and Arts for more information.

Social science deals with the behavior of individuals and groups as well as the functioning of the economic and political systems and institutions that shape and control our lives. As such, it offers a perspective that is essential for anyone desiring a well-rounded education.

Therefore, WPI, in common with other colleges, requires some exposure to the social sciences for its graduates. In satisfying the two-course social science requirement, students are free to take courses in any of the traditional social sciences: economics, political science, sociology, and psychology. Courses with the following prefixes may be counted toward the social science requirement: ECON, ENV, GOV, PSY, SD, SOC, SS, STS. The social science courses offered at WPI are grouped into two broad categories. The first consists of core courses that introduce students to the social sciences and help them understand the scope and limits of social science approaches and how they might be related to the design of Interactive Qualifying

Projects. The second, more advanced, set of courses looks in depth at particular issues and problems, providing students with a more detailed understanding of social science disciplines and their use in social problem solving and interactive projects.

To obtain maximum benefit from their study of social science, students should choose courses that will provide knowledge and skills relevant to their Interactive Qualifying Project. These courses should be taken prior to or concurrent with undertaking the IQP and should be selected, if possible, after the student has identified the general topic area in which his or her interactive project work will be carried out.

More information on the alternatives available and the factors that should be considered in choosing courses to satisfy the social science requirement are available on the Social Science and Policy Studies department website at www.wpi.edu/Academics/Depts/SSPS.

SECTION 2

AEROSPACE ENGINEERING

N.A. GATSONIS, DIRECTOR

PROFESSORS: M. Demetriou, N. A. Gatsonis, F. Looft, R. Sisson

ASSOCIATE PROFESSORS: J. Blandino, D. Lados, D. Olinger, M. Richman

ASSISTANT PROFESSORS: M. Chierichetti, S. Evans

MISSION STATEMENT

The Aerospace Engineering Program seeks to impart to our students strong technical competence in fundamental engineering principles along with specialized competence in aeronautical and astronautical engineering topics. The Program also seeks to foster a student's creative talents with the goal of developing a personal high standard of excellence and professionalism. Finally, the Aerospace Engineering Program seeks to provide to our students an appreciation of the role of the aerospace engineer in society.

PROGRAM EDUCATIONAL OBJECTIVES

- The graduates of the Aerospace Engineering Program will be successful as:
 - Aerospace or related engineering professionals in industry or government, and/or
 - Recipients of graduate degrees in aerospace and related engineering areas or in other professional areas.
- The graduates of the Aerospace Engineering Program will:
 - Become successful engineers as a result of their mastery of the fundamentals in mathematics and basic sciences, and as a result of their sound understanding of the technical concepts relevant to aerospace engineering and design.
 - Become leaders in business and society due to their broad preparation in the effective uses of technology, communication, and teamwork, and due to their appreciation of the importance of globalization, professional ethics, and impact of technology on society.

PROGRAM OUTCOMES

Graduating students should demonstrate that they attain the following:

- an ability to apply knowledge of mathematics, science, and engineering
- an ability to design and conduct experiments, as well as to analyze and interpret data
- an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- an ability to function on multi-disciplinary teams
- an ability to identify, formulate, and solve engineering problems
- an understanding of professional and ethical responsibility

- an ability to communicate effectively
- the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
- a recognition of the need for, and an ability to engage in lifelong learning
- a knowledge of contemporary issues
- an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice
- knowledge covering one of the areas - aeronautical engineering or astronautical engineering - and, in addition, knowledge of some topics from the area not emphasized
- design competence that includes integration of aeronautical or astronautical topics

Program Distribution Requirements for the Aerospace Engineering Major

The normal period of residency at WPI is 16 terms. In addition to the WPI requirements applicable to all students (see WPI Degree Requirements) students wishing to receive a Bachelor degree in "Aerospace Engineering", must satisfy additional distribution requirements. These requirements apply to 10 units of study in the areas of mathematics, basic sciences, aerospace engineering science and design.

REQUIREMENTS	MINIMUM UNITS
1. Mathematics and Basic Sciences (Notes 1,2,3,4)	4
2. Engineering Science and Design (Includes MQP) (Notes 5,6)	6

NOTES:

- Must include a minimum of 5/3 units of mathematics including differential and integral calculus, and differential equations.
- Must include a minimum of 3/3 units in physics including introductory electricity and magnetism, and intermediate mechanics.
- Must include 1/3 unit in chemistry.
- Must include 1/3 units in thermodynamics (can be satisfied with CH 3510 as a Mathematics and Basic Science Elective, or other equivalent course with approval of the AE Program Committee)
- Must include 18/3 units in Engineering Science and Design, distributed as follows:
 - 12/3 units in Aeronautical Engineering
 - 3/3 units in Aerodynamics with topics in: incompressible fluid dynamics, compressible fluid dynamics, subsonic and supersonic aerodynamics.
 - 2/3 units in Aerospace Materials with topics in: materials science, and aerospace materials.
 - 2/3 units in Structures, with topics in: stress analysis, and aerospace structures.
 - 2/3 units in Propulsion, with topics in: introductory fluid dynamics, and gas turbine propulsion.
 - 2/3 units in Flight Mechanics, and Stability and Control, with topics in: control theory, and aircraft dynamics and controls.
 - 1/3 units in Major Design of a system, component, or process to meet desired needs incorporating appropriate engineering standards and multiple realistic constraints, including the integration of aeronautical topics (fulfilled by AE/ME 4770 Aircraft Design).

AEROSPACE ENGINEERING PROGRAM CHART

12/3 UNITS OF GENERAL EDUCATION ACTIVITIES

6/3 Units H&A REQUIREMENT	See WPI Requirements
3/3 Unit INTERACTIVE QUALIFYING (IQP) PROJECT	See WPI Requirements
2/3 Units SOCIAL SCIENCE	See WPI Requirements
1/3 Unit PHYSICAL EDUCATION	See WPI Requirements

3/3 UNITS OF FREE ELECTIVE

3/3 Units FREE ELECTIVE	See Catalog
-------------------------	-------------

12/3 UNITS OF MATHEMATICS AND BASIC SCIENCE

Mathematics 5/3 Units	Physics 3/3 Units	Chemistry 1/3 Units	Electives 3/3 Units

4/3 Units in AERONAUTICAL AND ASTRONAUTICAL ENGINEERING		4/3 Units in AERONAUTICAL AND ASTRONAUTICAL ENGINEERING		
Experimentation 1/3 Unit	ME 3901 Engineering Experimentation	Experimentation 1/3 Unit	ME 3901 Engineering Experimentation	
Aerospace Design 3/3 Units	Major Qualifying Project in Aerospace Engineering	Aerospace Design 3/3 Units	Major Qualifying Project in Aerospace Engineering	

The courses in the above chart can be replaced by other equivalent courses, with the approval of the AE Program Committee

Note 1: 1/3 unit in Thermodynamics (can be satisfied with CH 3510 as a Mathematics and Basic Science Elective, or ES 3001 Intro to Thermodynamics as a Free Elective, or other equivalent courses with approval of the AE Program Committee)

Note 2: 1/3 unit of an activity must be in Capstone Design (can be satisfied with MQP, AE/ME 4770, or AE/ME 4771)

- b. 2/3 units in Astronautical Engineering
 - i) 1/3 unit in Orbital Mechanics and Space Environments (fulfilled by AE/ME 2713 Astronautics).
 - ii) 1/3 units in Telecommunications (fulfilled by AE/ME 4733 Guidance, Navigation and Communication).
 - c. 4/3 units in Aeronautical and Astronautical Engineering
 - i. 1/3 unit in Experimentation (fulfilled by ME 3901 Engineering Experimentation).
 - ii) 3/3 units in Aerospace Design that involves the design of a system, component, or process to meet desired needs that includes integration of aeronautical and/or astronautical topics (fulfilled by the MQP).
- or**
- a. 12/3 units in Astronautical Engineering
 - i. 1/3 unit in Orbital Mechanics, Space Environments (fulfilled by AE/ME 2713 Astronautics)
 - ii. 2/3 units in Attitude Determination and Control, with topics in: control theory and spacecraft dynamics and controls.
 - iii. 1/3 units in Telecommunications (fulfilled by AE/ME 4733 Guidance, Navigation and Communication).
 - iv. 3/3 units in Space Structures, with topics in: materials, stress analysis, and aerospace structures.
 - v. 4/3 units in Rocket Propulsion, with topics in: introductory fluid dynamics, incompressible fluid dynamics, compressible fluid dynamics and, rocket propulsion.
 - vi. 1/3 unit in Major Design of a system, component, or process to meet desired needs incorporating appropriate engineering standards and multiple realistic constraints, including the integration of astronautical topics (fulfilled by AE/ME 4771 Spacecraft and Mission Design).
 - b. 2/3 units in Aeronautical Engineering
 - i. 1/3 units in Aerodynamics (fulfilled by AE/ME 3711 Aerodynamics).
 - ii. 1/3 units in Aerospace Materials (fulfilled by AE/ME 4718 Advanced Materials with Aerospace Applications).
 - c. 4/3 units in Aeronautical and Astronautical Engineering
 - i. 1/3 units in Experimentation (fulfilled by ME 3901 Engineering Experimentation).
 - ii. 3/3 units in Aerospace Design that involves the design of a system, component, or process to meet desired needs that includes integration of aeronautical and/or astronautical topics (fulfilled by the MQP).
6. Must include a 1/3 Capstone design activity (fulfilled by AE/ME 4770, AE/ME 4771 or MQP).

MAJOR QUALIFYING PROJECTS

The Aerospace Engineering Program provides opportunities, resources and organization for Major Qualifying Projects (MQPs). The MQPs involve the design of an aerospace system, component, or process to meet a set of requirements and include the integration of aeronautical and/or astronautical engineering topics. MQPs are conducted in the research laboratories of the Aerospace Engineering Program and serve as a vehicle for integration of undergraduate studies with current research activities. Some MQPs are also conducted in collaboration with industry or government research centers. All students present their MQP in a conference held at WPI on Project Presentation Day. Students are also encouraged and often supported to participate in student and professional conferences, as well as national design competitions. (<http://www.me.wpi.edu/Aero/mqp.html>)

AIR FORCE AEROSPACE STUDIES

LT COL M. DeROSA, HEAD

PROFESSOR: Lt Col M. DeRosa

ASSISTANT PROFESSORS: Maj. J. T. Kruger, Capt. V. Bussmann

MISSION

The mission of AFROTC is to produce quality leaders for the Air Force, whose mission is to fly, fight, and win in air, space, and cyberspace. Successful graduates of the program receive a commission as a Second Lieutenant in the United States Air Force.

EDUCATIONAL OBJECTIVES:

Students who successfully complete the AFROTC program will have:

1. An understanding of the fundamental concepts and principles of Air and Space.
2. A basic understanding of associated professional knowledge.
3. A strong sense of personal integrity, honor, and individual responsibility.
4. An appreciation of the requirements for national security.

AIR FORCE ROTC PROGRAMS

There are two traditional routes to an Air Force commission through Air Force ROTC. Entering students may enroll in the Air Force Four-Year Program. Students with at least three academic years remaining in college may apply for the Accelerated Program.

FOUR-YEAR PROGRAM

The preferred program is the traditional Four-Year Program. To enroll, simply register for Air Force Aerospace Studies in the fall term of the freshman year in the same manner as other college courses. There is **NO MILITARY OBLIGATION** for the first two years of Air Force ROTC unless you have an Air Force ROTC scholarship.

The first two years are known as the General Military Course (GMC). Classes meet one hour per week and are required for freshmen and sophomores.

Individuals who successfully complete the GMC compete nationwide for entry into the Professional Officers Course (POC). POC classes meet three hours per week and are required for all juniors and seniors. Officer Candidates enrolled in the POC and on scholarship receive a nontaxable subsistence allowance of up to \$500 each month.

Qualified Officer candidates will attend the Air Force ROTC field-training program for four weeks, usually between their sophomore and junior years.

ACCELERATED PROGRAM

For students who do not enroll in Air Force ROTC during their first year in college it is possible to condense the two years of GMC membership into a single year, as long as the student has three more years of college left.

Students must join the Air Force ROTC program before or during the fall semester of their sophomore year. The applicant will be given a physical examination at no expense and will be required to meet all other retention standards. In addition, the candidate will interview with a selection board for entrance into the POC.

OTHER ASPECTS OF THE AFROTC PROGRAM

Leadership Laboratory:

Air Force ROTC officer candidates participate in a Leadership Laboratory (LLAB) where the leadership skills and management theories acquired in the classroom are put into practice. The LLAB meets once each week for approximately two hours.

This formal military training is largely planned and directed by the officer candidates. The freshmen and sophomores are involved in such initial leadership experiences as problem solving, dynamic leadership, team building, Air Force customs and courtesies, drill movements, Air Force educational benefits, Air Force career opportunities, and preparation for field training. The juniors and seniors are involved in more advanced leadership experiences as they become responsible for the planning and organizing of wing activities, including conducting the Leadership Laboratory itself.

Field Training:

The summer program is designed to develop military leadership, discipline, and to provide Air Force officer orientation and motivation. At the same time, the Air Force can evaluate each student's potential as an officer. Field training includes instruction in the following areas: expeditionary operations, aircraft and aircrew orientation, Air Force professional development orientation, marksmanship training, becoming an officer, physical fitness, and survival training. Uniforms, lodging, and meals are provided at no cost to the cadet. Travel at Air Force expense is authorized by air or privately owned vehicle to and from the individual's home of record or school. Additionally, after applicable deductions, cadets receive pay of approximately \$500 for the four-week encampment.

Base Visits:

Air Force ROTC officer candidates may have the opportunity to visit Air Force bases for firsthand observation of the operating Air Force. These trips are frequently made on weekends or scheduled to coincide with school vacation periods. Officer candidates may be flown by military aircraft or travel by bus to an Air Force base where they will spend several days observing Air Force operations before returning to campus.

Other Benefits:

The Air Force provides all Air Force ROTC uniforms and textbooks for on-campus programs and field training. All officer candidates who have received an Air Force scholarship or are enrolled in the Professional Officer Course (POC) may travel free on military aircraft on a space available basis.

Additional Information:

In addition to formal activities, the cadet wing plans and organizes a full schedule of social events throughout the academic year. These include a Dining-In, Military Ball, a Field Day, and intramural sports activities. Professional Development Training Programs, such as Advanced Cyber Education, internships with the National Reconnaissance Office, combatives training, and global cultural language and immersion training may also be available to selected volunteer officer candidates during the summer.

Arnold Air Society:

Each officer candidate can elect to be part of a national society dedicated to conducting service related events for the Air Force and local community. These Arnold Air Society members are involved in a myriad of service projects to include charity work, service to the poor, work with local orphanages, and similar activities. Twice a year, members participate in conventions/conclaves held in various cities and attended by members from all the schools in the country sponsoring AFROTC. Membership is by nomination after completion of a one semester, project-oriented pledge program.

Drill Team:

Each officer candidate can elect to be part of the acclaimed Strike Eagles Honor Guard, a team dedicated to honoring our nation's flag with outstanding drill and ceremonies, professionalism, leadership, dynamic fellowship, and pride in service. The team presents the colors at various events in the local community including Red Sox and Bruins games. At least once a year, members participate in regional competitions held in various cities and attended by ROTC drill teams nation-wide. Membership is voluntary after completion of a one semester, training-oriented pledge program. These cadets have the privilege of wearing the white or silver aiguillette on their service uniforms, depending on length of service.

Civil Air Patrol:

All Air Force ROTC officer candidates at AFROTC Detachment 340 have the opportunity to become members of the Civil Air Patrol and to receive up to 8 flight orientation rides on Civil Air Patrol aircraft at Worcester Regional Airport.

ARCHITECTURAL ENGINEERING

DIRECTOR: R. PIETROFORTE

ASSOCIATED FACULTY: L. Albano (CEE), N. Dempsey (FPE), T. El-Korchi (CEE), Y. Kim (CEE), B. Meachan (FPE), R. Mallick (CEE), K. Notarianni (FPE), G. Salazar (CEE), M. Tao (CEE)

MISSION STATEMENT

Architectural Engineering is a discipline that focuses on the planning, design, construction and operation of buildings and, particularly, on their parts that support the functioning of the inner space and the undertaking of human activities, including environmental protection, comfort and security. One of the major focuses of the architectural engineering program at WPI is the use of energy in buildings, and this is addressed through courses and projects that incorporate engineering science and design fundamentals that relate to those building parts, e.g., envelope, heating and air conditioning, plumbing and electrical systems, which impact the consumption of energy and natural resources. The program seeks to impart to students strong technical competence in fundamental engineering principles as they are applied to a sustainable built environment. The program, in addition, seeks to foster a student's creative undertaking and his/her development of high standards of professionalism. The project approach at WPI offers students a unique opportunity to explore the humanistic, technological, societal, economic, legal, and environmental issues surrounding

architectural engineering problems. The architectural engineering degree prepares students for careers in the private and public sectors, architectural and engineering consulting, real estate and construction firms, and advanced graduate studies.

PROGRAM EDUCATIONAL OBJECTIVES

1. To educate students in the fundamental principles of architectural engineering.
2. To help students develop the ability to use architectural engineering principles in analyzing and solving problems of practical importance to the built environment and society at large.
3. To educate students about the need for lifelong learning and professional development after graduation.
4. To educate students to become leaders in the architectural engineering profession and society, and develop the requisite professional and ethical demeanor for a successful engineering career.

PROGRAM OUTCOMES

Students graduating with a B.S. in Architectural Engineering will attain the following outcomes:

1. A working knowledge of the fundamentals of mathematics, physics and chemistry, including advanced subjects that further the learning of specific architectural engineering areas.
2. The ability to design and conduct experiments, to gather and analyze data as well as apply the results to address architectural engineering problems.
3. The ability to design a building system, component or process that meets desired needs within realistic constraints such as sustainability, economics, functionality, health and safety, and constructability.
4. Understanding of the building design process and the ability to develop engineering design solutions which include multidisciplinary aspects within architectural constraints
5. Achieving the design level in one of the four architectural engineering areas, the application level in a second area, and the comprehension level in the remaining two areas.
6. The ability to use the techniques and engineering tools necessary for engineering practice.
7. The broad education necessary to understand the impact of engineering solutions in a global, political, environmental and social context.
8. Preparation for architectural engineering practice, including its technical, professional, and ethical components.
9. Understanding of the options for careers and further education, and the educational preparation necessary to pursue those options.
10. The recognition of the need for and an ability to engage in lifelong learning.
11. An ability to function on and collaborate within multidisciplinary teams.
12. An ability to write coherent and accurate technical reports and to make effective oral presentations.

Program Distribution Requirements for the Architectural Engineering Major

The program is designed according to the ABET criteria for Architectural Engineering accreditation. The four basic architectural engineering curriculum areas are building structures, building mechanical systems, building electrical systems and construction/construction management. The normal period of residency at WPI is 16 terms. In addition to WPI requirements applicable to all students (see WPI Degree requirements), students wishing to receive a Bachelor degree in "Architectural Engineering" must satisfy the following distribution requirements:

REQUIREMENTS	MINIMUM UNITS
1. Mathematics and Basic Science (Note 1)	4
2. Architectural Engineering Complements (Note 2)	1
3. Engineering Science and Design (Notes 3, 4, 5)	5 1/3

NOTES:

1. Mathematics must include differential and integral calculus, differential equations, probability, and statistics. Science must include 2/3 unit in calculus-based physics (either the PH1110 or PH1111 series), 1/3 unit in chemistry, 1/3 unit in thermodynamics (can be fulfilled by CH 3510 or other approved equivalent course such as ES 3001).
2. Must include topics in architectural graphics and communication (AREN 3001), in architectural design, (AREN 3002), and architectural history, (AR 2114 or approved equivalent).
3. Must include 4 1/3 units in the four areas of Architectural Engineering, distributed as follows or with approved equivalents:
 - a) 2/3 units in the general architectural engineering area (AREN 2023) and fluid mechanics (ES 3004)
 - b) 2/3 units in construction/construction management selected from topics in professional practice (CE 3022), project management (CE 3020), and project evaluation (CE 3025).
 - c) 2/3 units in building mechanical systems including HVAC systems (AREN 3003) and either heat transfer (ES 3003) or fire safety (FPE 3080).
 - d) 2/3 units in building electrical systems with topics in: principles of electrical engineering (ECE 2010) and electrical and lighting systems (AREN 3004).
 - e) 3/3 units in fundamentals of structural engineering selected from any three of the following four areas: statics (CE 2000 or ES 2501), strength of materials (CE 2001 or ES 2502), structural analysis including indeterminate structures (CE 2002), and soil mechanics (CE 3041).
 - f) 2/3 units in advanced courses in building structures selected from topics in steel design (CE 3006), concrete design (CE 3008), pre-stressed concrete design (CE 4017) and structural engineering (CE 3010).

or

2/3 units in advanced courses in building mechanical systems selected from topics in HVAC design (AREN 3006), radiation heat transfer applications (ES 3005) and fire safety (FPE 3070).
4. Must include 1/3 unit in Experimentation (fulfilled by AREN 3003, ME 3901, CE 3026 or approved equivalent).
5. Must include the Capstone Design activity through the MQP in one of the architectural engineering areas.

For more information please consult the website for this major at <http://www.wpi.edu/academics/Dept/CEE/undergraduate/aren.html>.

ARCHITECTURAL ENGINEERING PROGRAM CHART

4 UNITS OF MATHEMATICS AND BASIC SCIENCE

Mathematics		5/3 Units
MA 1021	Calculus I	
MA 1022	Calculus II	
MA 1023	Calculus III	
MA 1024	Calculus IV	
MA 2051	Ordinary Differential Equations	
Statistics and Probability		2/3 Units
MA 2611	Applied Statistics I	
MA 2621	Probability for Applications	
Physics		2/3 Units
PH 1110 or PH 1111	Mechanics	
PH 1120 or PH 1121	Electricity and Magnetism	
Chemistry		1/3 Units
CH 1010 or CH 1020	Chemistry I or Chemistry II	
Electives		2/3 Units
CH 3510	Thermodynamics (Note 1)	

1 UNIT OF ARCHITECTURAL ENGINEERING COMPLEMENTS

AR 2114	Modern Architecture in the American Era, 1750-2001 and Beyond
AREN 3001	Architectural Graphics and Communication
AREN 3002	Architectural Design

4 1/3 UNITS OF ENGINEERING SCIENCE AND DESIGN (Notes 2, 3)

General Architectural Engineering		2/3 Units
AREN 2023	Introduction to Architectural Engineering Systems	
ES 3004	Fluids Mechanics	
Construction/Construction Management (select two)		2/3 Units
CE 3020	Project Management	
CE 3022	Legal Aspects of Professional Practice	
CE 3025	Project Evaluation	
Building Mechanical Systems (select two)		2/3 Units
ES 3003	Heat Transfer	
FPE 3080	Introduction to Building Fire Safety System Design	
AREN 3003 (required)	Principles of HVAC Design for Buildings	
Building Structural Engineering (select three)		3/3 Units
CE 2000	Analytical Mechanics I (or ES 2501)	
CE 2001	Analytical Mechanics II (or ES 2502)	
CE 2002	Introduction to Analysis and Design	
CE 3041	Soil Mechanics	
Building Electrical Systems		2/3 Units
ECE 2010	Introduction to Electrical and Computer Engineering	
AREN 3004	Building Electrical and Lighting Systems	

Students can achieve design proficiency in either the structural or mechanical area.

Design Focus on the Structural Area (select two)		2/3 Units
CE 3006	Design of Steel Structures	
CE 3008	Design of Reinforced Concrete Structures	
CE 3010	Structural Engineering	
CE 4017	Prestressed Concrete Design	

OR

Design Focus on the Mechanical Area (select two)		2/3 Units
FPE 3070	Fundamentals of Fire Safety Analysis	
ES 3005	Radiation Heat Transfer Applications	
AREN 3006	Advanced HVAC System Design	

Major Qualifying Project (Note 4)		3/3 Units
--	--	------------------

- Note1: Can be satisfied with CH 3510 as a mathematics and Basic Elective, or ES 3001, Introduction to Thermodynamics as a Free Elective, or other approved equivalent course.
 Note 2: Must include 1/3 unit in Experimentation (fulfilled by AREN 3003, ME 3901, CE 3026 or approved equivalent).
 Note 3: The courses in the above Engineering Science and Design chart can be replaced by other approved equivalents.
 Note 4: Must include the Capstone Design activity.

5 UNITS ADDITIONAL DEGREE REQUIREMENTS

Humanities and Arts	6/3 Units
Social Sciences ‡	2/3 Units
IQP	3/3 Units
Physical Education	1/3 Units
Free Electives	3/3 Units

‡ Many SS courses compliment topics in architectural engineering. Courses in environmental policy, regulations as well as environmental and development economics are recommended.

BIOINFORMATICS AND COMPUTATIONAL BIOLOGY

DIRECTOR: M.O. WARD (CS)

PROGRAM COMMITTEE: C. RUIZ (CS), E. RYDER (BB), M.O. WARD (CS), Z. WU (MA)

ASSOCIATED FACULTY: E. Agu (CS), J. Duffy (BB), M.Y. Eltabakh (CS), R.E. Kinicki (CS), W.J. Martin (MA), S.D. Olson (MA), R. Prusty Rao (BB), S.M. Politz (BB), C. Ruiz (CS), E.A. Rundensteiner (CS), E. Ryder (BB), B. Servatius (MA), D. Tang (MA), L. Vidali (BB), M.O. Ward (CS), Z. Wu (MA)

MISSION STATEMENT

With the advent of large amounts of biological data stemming from research efforts such as the Human Genome Project, there is a great need for professionals who can work at the interface of biology, computer science, and mathematics to address important problems involving complex biological systems. Graduates of this interdisciplinary program will be well versed in all three disciplines, typically specializing in one of them. Many opportunities for interdisciplinary research projects are available, both on the WPI campus, and through relationships with faculty at the University of Massachusetts Medical School. Graduates will be well-prepared for graduate study or for professional careers in industry.

PROGRAM OUTCOMES

Students graduating with a Bachelor of Science degree in Bioinformatics and Computational Biology:

- Have mastered foundational studies in biology, mathematics, and computer science
- Have mastered advanced principles and techniques in at least one of the three disciplines
- Can apply computational and mathematical knowledge to the solution of biological problems
- Can communicate effectively across disciplines both verbally and in writing
- Can locate, read, and interpret primary literature in bioinformatics and computational biology
- Can formulate hypotheses or models, design experiments to test these hypotheses, and interpret experimental data
- Can function effectively as members of an interdisciplinary team
- Adhere to accepted standards of ethical and professional behavior
- Will be life-long independent learners

Program Distribution Requirements for the Bioinformatics and Computational Biology Major

The distribution requirements for the BS degree in Bioinformatics consists of core courses in Biology, Chemistry, Mathematics, and Computer Science, several interdisciplinary courses, and a set of advanced courses primarily focused on one of three disciplines: Computer Science, Biology/Biochemistry, or Mathematics.

REQUIREMENTS	MINIMUM UNITS
1. Mathematics (Note 1)	5/3
2. Computer Science (Note 2)	4/3
3. Biology (Note 3)	5/3
4. Chemistry (Note 4)	4/3
5. Bioinformatics and Computational Biology (Note 5)	3/3
6. Social Implications (Note 6)	1/3
7. Advanced disciplinary courses (Note 7)	6/3
8. MQP	3/3

NOTES:

1. Mathematics must include 2/3 unit of differential and integral calculus and statistics. The additional 1/3 unit must be chosen from linear algebra, statistics, probability, calculus, and differential equations.
2. Computer Science must include 2/3 unit of introductory programming and 1/3 unit of discrete math and algorithms.
3. Biology must include cell biology, genetics, molecular biology, and 1/3 unit BB 2000 level laboratory.
4. Chemistry must include 2/3 unit of general chemistry and 1/3 unit of organic chemistry.
5. Chosen from BCB interdisciplinary courses.
6. Chosen from CS 3043, STS 2208, or PY 2713.
7. Chosen from advanced courses in MA, CS, BB, or CH listed below. Students must complete at least one unit at the 4000-level, and at least one unit of advanced courses in one of the following areas: MA, CS, or BB/CH.

Advanced courses in MA:

MA 2431	Mathematical Modeling with Ordinary Differential Equations
MA 2621	Probability for Applications
MA 2631	Probability
MA 3627	Applied Statistics III
MA 3631	Mathematical Statistics
MA 4214	Survival Models
MA 4473	Partial Differential Equations
MA 4631	Probability and Mathematical Statistics I
MA 4632	Probability and Mathematical Statistics II

Advanced courses in CS:

CS 3733	Software Engineering
CS 3431	Database Systems I
CS 4120	Analysis of Algorithms
CS 4341	Introduction to Artificial Intelligence
CS 4432	Database Systems II
CS 4445	Data Mining and Knowledge Discovery in Databases

Advanced courses in BB/CH:

Any BB 3000/4000 level course or CH 4000 level Biochemistry course. Particularly relevant BB/CH courses:

BB	3140 Evolution: Pattern and Process
BB	4550 Advanced Cell Biology
BB	4010 Advanced Molecular Genetics
BB/CH 4190	Regulation of Gene Expression
CH 4110	Biochemistry I
CH 4120	Biochemistry II
CH 4130	Biochemistry III

MINOR IN BIOINFORMATICS AND COMPUTATIONAL BIOLOGY (BCB)

Students pursuing the Bioinformatics and Computational Biology minor need to acquire some familiarity with the three fields that form the basis of this interdisciplinary area: biology, mathematics, and computer science. They should also take at least one interdisciplinary course that uses quantitative methods to pose and answer biological problems. Students should be careful to choose their mathematics, computer science, and biology courses to prepare themselves for whichever capstone BCB 4000 level course they plan to take.

REQUIREMENTS

- 5/3 units in BB, MA, CS, and BCB, chosen from the course lists below, with at least 1/3 unit in each of BB, CS, and MA, and no more than 2/3 unit from any of these three areas. No more than 1 course at the 1000 level may be included from any one department.
- 1/3 unit capstone: any BCB 4000 level class. Must be taken as the last course in the minor sequence.

MA courses

- MA 2610 Statistics for the Life Sciences or
MA 2611 Applied Statistics I
- MA 2612 Applied Statistics II
- MA 2621 Probability for Applications
- MA 2051 Ordinary Differential Equations
- MA 2631 Probability
- Any course from the Advanced courses in MA list for the BCB major

CS courses

- CS 1101 Intro to Programming or CS 1102 Accelerated intro to Programming
- CS 2102 Object Oriented Design
- CS 2223 Algorithms
- Any course from the Advanced courses in CS list for the BCB major

BB courses

- BB 1035 Intro to Biotechnology
- BB 1045 Biodiversity
- BB 1025 Human Biology
- BB 2920 Genetics
- BB 2950 Molecular Biology
- BB 2550 Cell Biology
- BB 2002 Microbiology
- BB 2040 Ecology
- Any course from the Advanced courses in BB/CH list for the BCB major

BCB Interdisciplinary courses

- BCB 4001 Bioinformatics
- BCB 4002 Biovisualization
- BCB 4003 Biological and Biomedical Database Mining
- BCB 4004 Statistical Methods in Genetics and Bioinformatics

BIOLOGY AND BIOTECHNOLOGY

J. DUFFY, HEAD

PROFESSORS: D. S. Adams, K. Oates, E. W. Overström, P. J. Weathers

ASSOCIATE PROFESSORS: T. Dominko, J. Duffy, L. Mathews, S. M. Politz, R. Rao, J. Rulfs, E. Ryder

ASSISTANT PROFESSORS: R. Gegear, L. Vidali

ASSISTANT TEACHING PROFESSORS: M. Buckholt, A. Hunter, J. Whitefleet-Smith

LAB INSTRUCTOR: A. Hunter

EMERITUS PROFESSORS: R. Cheetham, T. C. Crusberg

MISSION STATEMENT

The Department of Biology and Biotechnology will make scholarly scientific and technological advances that will address the changing needs of society. We will prepare well educated scientists able to approach problems with creativity and flexibility. A key element in this preparation is active participation in the process of scientific inquiry.

PROGRAM EDUCATIONAL OBJECTIVES

The educational objectives of the Department of Biology and Biotechnology are to prepare students to function as scientists and educators in a broad array of biological disciplines. We recognize that the well educated scientist needs facility in technology and skill in critical thinking to function effectively in the professional arena as well as in the global community.

PROGRAM OUTCOMES

Students graduating with a Bachelor of Science degree from the Department of Biology and Biotechnology:

- have mastered a broad range of basic lab skills applicable to biology and biotechnology.
- have mastered applied research skills at an advanced level in at least one area of biology and biotechnology.
- know and understand a broad range of basic biological concepts, and can apply and analyze these in at least one speciality area.
- are able to generate hypotheses, design approaches to test them, and interpret the data from those tests to reach valid conclusions.
- have developed the ability to place their own work in a broader scientific context.
- have developed oral and written communication skills relevant to professional positions in biology and biotechnology.
- can find, read and critically evaluate the original scientific literature.
- possess skills necessary for life-long professional learning.
- can function effectively as members of a team.
- demonstrate adherence to accepted standards of professional and ethical behavior.

Program Distribution Requirements for the Biology and Biotechnology Major

REQUIREMENTS	MINIMUM UNITS
1. Mathematical Sciences, Physics, Computer Science, Engineering (Note 1)	5/3
2. Chemistry	5/3
3. Biology & Biotechnology (Note 2)	10/3
4. Laboratory experience (Note 3)	4/3
5. Related courses (Note 4)	3/3
6. MQP	1

NOTES:

- BB 3040 or BB 4801 may count toward this requirement.
- Biology and Biotechnology coursework must include 2/3 units at the 1000 level, 4/3 units at the 2000 level, and 4/3 units at the 3000/4000 level, of which at least 1/3 unit must be at the 4000 level. BB 1000, BB 1001 and BB 1002 may not count toward the major requirement. At least 2/3 unit of Biology and Biotechnology coursework must be taken from each of three major divisions of biology (below). The 2/3 unit for each division may include courses from any level (1000-4000).
- Chosen from among the BB 2000 and 3000 level labs and the Experimental Biochemistry labs, CH 4150 and CH 4170.
 - Must include at least 1/2 unit of work at the 2000 level.
 - Only **one** Experimental Biochemistry lab may be used (either 4150 **OR** 4170).
 - In addition, you may not count both CH 4150 and any of BB 3516, 3518 or 3519. Likewise, you may not count both CH 4170 and any of BB 3512, 3518 and 3520.
- Chosen from the Related Courses List or additional BB 3000/4000 level courses.

THE THREE MAJOR DIVISIONS OF BIOLOGY

1. Cellular and molecular biology

BB 1035	Introduction to Biotechnology
BB 2002	Microbiology
BB 2550	Cell Biology
BB 2920	Genetics
BB 2950	Molecular Biology
BB 4008	Cell Culture Theory and Applications
BB 4010	Advanced Molecular Genetics
BB 4065	Virology
BB/CH 4190	Regulation of Gene Expression
BB 4550	Advanced Cell Biology

2. Biology of the organism

BB 1025	Human Biology
BB 3101	Anatomy and Physiology I
BB 3102	Anatomy and Physiology II
BB 3080	Neurobiology
BB 3120	Plant Physiology and Cell Culture
BB 3620	Developmental Biology I
BB 3920	Immunology

3. Organisms in their environment

BB 1045	Introduction to Biodiversity
BB 2030	Plant Diversity
BB 2040	Principles of Ecology
BB 2050	Animal Behavior
BB 3140	Evolution: Pattern and Process
BB 4150	Environmental Change: Problems and Approaches

RELATED COURSES

BCB 4002	Biovisualization
BCB 4003	Biological and Biomedical Database Mining
BCB 4004	Statistical Methods in Genetics and Bioinformatics
CE 3059	Environmental Engineering
CH 2330	Organic Chemistry III
CH 3510	Chemical Thermodynamics
CH 4110	Biochemistry I
CH 4120	Biochemistry II
CH 4160	Membrane Biophysics
CHE 3301	Introduction to Biological Engineering

UNDERGRADUATE RESEARCH PROJECTS

The biology and biotechnology facilities offer an exceptional learning opportunity since research in an active laboratory group is the principal teaching tool. Tools for modern biochemistry, molecular biology, tissue culture, fermentation, ecology, microscopy and computer integration are all available to undergraduates.

In conjunction with the faculty, students who wish to expand their educational opportunities pursue many off-campus projects each year. Investigations may take place at institutions that have traditionally worked with WPI, such as the University of Massachusetts Medical School, Tufts Cummings School of Veterinary Medicine, and the Woods Hole Marine Biological Laboratories. The department also has established links with several companies that provide opportunities for project work and summer employment in applied biology and biotechnology.

Undergraduate research projects may be proposed by individual students or groups of students, or may be selected from on-going research activities of the faculty. The departmental faculty must be consulted for approval of a project before student work begins.

MINOR IN BIOLOGY

Rather than trying to cover the entire field of biology, the minor in biology has been designed to allow the student to survey a few areas of biology (e.g. ecology and genetics) or to select a specific area of focus (e.g. cell biology) for the minor. In either case, students will complete three courses at the 1000 and 2000 level to provide broad foundational knowledge, two laboratory modules, and two 3000/4000 level courses for advanced study, including a 4000 level course of the student's choosing. Students should choose their foundational courses carefully so that they provide recommended background for upper level courses they plan to take. As with all minors, 1 unit of this work may be double counted toward meeting another degree requirement, while a minimum of 1 unit of the work must be unique to the minor. The specific requirements for the minor are as follows:

REQUIREMENTS	UNITS
1000 level BB course	1/3
2000 level BB courses	2/3
BB laboratory courses (two 1/6 unit modules; note 1)	1/3
3000/4000 level BB course	1/3
4000 level BB course	1/3

NOTE

- At least one of the BB laboratory courses must be at the 2000 level.

BIOMEDICAL ENGINEERING

K. CHON, HEAD

PROFESSOR: K. Chon

ASSOCIATE PROFESSORS: K. L. Billiar, G. R. Gaudette, Y. Mendelson, G. D. Pins

ASSISTANT PROFESSORS: D. Albrecht, P. Flaherty, A. Jain, R. L. Page, M. W. Rolle

EMERITUS PROFESSOR: R. A. Peura

LABORATORY INSTRUCTORS: S. Ambady, M. Norige

MISSION STATEMENT

The Biomedical Engineering Department prepares students for rewarding careers in the health care industry or professional programs in biomedical research or medicine.

PROGRAM EDUCATIONAL OBJECTIVES

The educational objectives of the Biomedical Engineering Department, which closely embrace the WPI educational philosophy, are to prepare professionals who can apply fundamental knowledge of engineering and basic science to solve problems in biology and medicine and can engage in a lifetime of professionalism and learning.

PROGRAM OUTCOMES

The Biomedical Engineering Department has established 13 educational outcomes in support of our department objectives. These general and specific program criteria meet the requirements for Biomedical Engineering accreditation by ABET (the Accreditation Board for Engineering and Technology). Accordingly, students graduating from the Biomedical Engineering Department will demonstrate:

1. An ability to apply knowledge of advanced mathematics (including differential equations and statistics), science, and engineering to solve the problems at the interface of engineering and biology.
2. An ability to design and conduct experiments, as well as to analyze and interpret data from living and non-living systems.
3. An ability to design a system, component, or process to meet desired needs.
4. An ability to function on multi-disciplinary teams.
5. An ability to identify, formulate, and solve engineering problems.
6. An understanding of professional and ethical responsibilities.
7. An ability to communicate effectively.
8. The broad education necessary to understand the impact of engineering solutions in a global and societal context.
9. A recognition of the need for, and an ability to engage in life-long learning.
10. A knowledge of contemporary issues.
11. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
12. An understanding of biology and physiology.
13. An ability to address the problems associated with the interaction between living and non-living materials and systems.

Biomedical engineering is the application of engineering principles to the solution of problems in biology and medicine for the enhancement of health care. Students choose this field in order:

- to be of service to people;
- to work with living systems; and
- to apply advanced technology to solve complex problems of medicine.

Biomedical engineers may be called upon to design instruments and devices, to integrate knowledge from many sources in order to develop new procedures, or to pursue research in order to acquire knowledge needed to solve problems. The major culminates in a Major Qualifying Project, which requires that each student apply his or her engineering background to a suitable biomedical problem, generally in association with the University of Massachusetts Medical School, Tufts University School of Veterinary Medicine, one of the local hospitals, or a medical device company.

Each student's program will be developed individually with an advisor to follow the Biomedical Engineering program chart. WPI requirements applicable to all students must also be met. See page 7.

Biomedical engineering is characterized by the following types of activity in the field:

1. Uncovering new knowledge in areas of biological science and medical practice by applying engineering methods;
2. Studying and solving medical and biological problems through analytical techniques in engineering;
3. Designing and developing patient-related instrumentation, biosensors, prostheses, biocompatible materials, and diagnostic and therapeutic devices; and bioengineered tissues and organs;
4. Analyzing, designing, and implementing improved health-care delivery systems and apparatus in order to improve patient care and reduce health-care costs in contexts ranging from individual doctors' offices to advanced clinical diagnostic and therapeutic centers.

The modeling of biological systems is an example of applying engineering analytical techniques to better understand the dynamic function of biological systems. The body has a complex feedback control system with multiple subsystems that interact with each other. The application of modeling, computer simulation, and control theory provides insights into the function of these bodily processes.

Recently, there has been increased emphasis on the application of the biomedical engineering principles embodied in the third and fourth areas listed above. Examples of the third area include:

- designing and developing tissues and organs;
- development of implantable biomaterials;
- design of an implantable power source;
- design of transducers to monitor the heart's performance;
- development of electronic circuitry to control the system;
- bench and field testing of devices in animals;
- application of new technology to rehabilitation engineering.

The fourth area involves closer contact with the patient and health-care delivery system. This area is commonly referred to as Clinical Engineering. The engineer in the clinical environment normally has responsibility for the medical instrumentation and equipment including:

- writing procurement specifications in consultation with medical and hospital staff;
- inspecting equipment for safe operation and conformance with specifications;
- training medical personnel in proper use of equipment;
- testing within hospital for electrical safety; and
- adaptation of instrumentation to specific applications.

Biomedical engineering projects are available in WPI's Goddard Hall and Higgins Laboratories, the Life Sciences and Bioengineering Center at Gateway Park as well as at the affiliated institutions previously listed.

Program Distribution Requirements for the Biomedical Engineering Major

The normal period of residency at WPI is 16 terms. In addition to the WPI requirements applicable to all students (see page 7), a biomedical engineer needs a solid background in mathematics, physical and life sciences. The distribution requirements are satisfied as follows:

BIOMEDICAL ENGINEERING	MINIMUM UNITS
1. Mathematics (See Note 1)	6/3
2. Basic Science (See Note 2)	6/3
3. Supplemental Science (See Note 3)	1/3
4. Computer Science (Note 4)	1/3
5. Biomedical Engineering and Engineering (See Note 5)	14/3
6. MQP (See Note 6)	3/3

NOTES:

1. Mathematics must include differential and integral calculus, differential equations and statistics.
 2. 2/3 unit from each of the following areas: BB, CH and PH. At least 1/3 unit of BB coursework must be 2000+ level.
 3. 1/3 additional unit from BB, CH, PH or FY courses that satisfy BB, CH, or PH.
 4. 1/3 unit in basic computer programming (CS 1101, CS 1102, or equiv).
 5. 14/3 unit of engineering coursework as specified in the WPI Catalog "Courses Qualifying for Engineering Department Areas" with the following distribution:
 - A. 3/3 unit of 2000+ level in engineering.
 - B. 2/3 unit of 3000+ level in engineering.
 - C. 9/3 units in Biomedical Engineering which must include the following:
 - a. 1/3 unit biomechanics or biofluids at the 2000+ level
 - b. 1/3 unit biomaterials or tissue engineering at the 2000+ level
 - c. 1/3 unit biosensors or bioinstrumentation at the 2000+ level
 - d. 1/3 unit experimental measurement and data analysis at the 2000+ level
 - e. 2/3 unit of BME laboratories at the 3000+ level (four 1/6 unit labs)
 - f. 1/3 unit BME engineering with living systems laboratory (BME 3111 or equivalent)
 - g. 1/3 unit BME design (BME 3300 or equivalent)
 - h. 1/3 unit BME elective
- Notes:
- i. 2/3 unit in BME must be at or above the 4000 level, of which 1/3 unit must be at the 4000 level.
 - ii. Only 1/3 unit may be ISP (syllabus and final report required)
 - iii. MQP credits cannot be used to satisfy the 14/3 engineering coursework)

6. Must include a minimum of 1/3 unit Capstone Design Experience.
 - A. Each Biomedical Engineering student must complete a Capstone Design experience requirement. The Capstone Design experience is partially or fully accomplished by completing the Major Qualifying Project which integrates the past course work and involves significant engineering design. At the time of registration for the MQP, the project advisor will determine whether the MQP will meet the full 1/3 unit Capstone Design requirement or not. If not, the advisor will identify and additional 1/6 unit of course work in the area of engineering design (BME 4300 or equivalent) to be taken in order to meet the ABET Capstone Design requirement.

These distribution requirements in *Biomedical Engineering* apply to all students matriculating at WPI AY2012 and after. Students who matriculated prior to AY2012 have the option of satisfying the degree requirements in the catalog current at the time of their matriculation.

BIOMEDICAL ENGINEERING SPECIALIZATIONS

Because BME is such a broad and diverse discipline, it is convenient to subdivide it into a number of different specializations, or tracks. At the undergraduate level, these specializations help to bring focus to course and project planning. At the graduate-level, these specializations are aligned with the research interests of our faculty. Here at WPI, three specializations have been defined: 1) Biomechanics, 2) Biomedical Instrumentation, Biosignals and Image Processing, and 3) Biomaterials and Tissue Engineering. If students are interested in developing an undergraduate program of study in one of these specializations, they should consult the Program of Study in BME sections of the catalog, within their chosen areas of specialization. See the department web site for more details.

BIOMECHANICS

Biomechanics is a specialization within biomedical engineering that involves the application of engineering mechanics to the study of biological tissues and physiological systems. When most people first think of biomechanics, the way we move or the strength of bones generally comes to mind. However, many other aspects are included in this diverse field of study including:

- Dynamics – e.g., analysis of human movement including walking, running, and throwing.
- Statics – e.g., determination of the magnitude and nature of forces in joints, bones, muscles and implanted prostheses, and characterization of the mechanical properties of the tissues in our bodies.
- Fluid mechanics and transport – e.g., analysis flow of blood through arteries and air through the lung and diffusion of oxygen in tissues.

Biomechanics research has improved our understanding of:

- Design and manufacturing of medical instruments, devices for disabled persons, artificial replacements, and implants.
- Human performance in the workplace and in athletic competition.
- Normal and pathological human and animal locomotion.
- The mechanical properties of hard and soft tissues.
- Neuromuscular control.
- The connection between blood flow and arteriosclerosis.
- Air flow and lung pathology.

- The effects of mechanical loads on cellular mechanics and physiology.
- Morphogenesis, growth, and healing.
- The mechanics of biomaterials.
- Engineering of living replacement tissue (tissue engineering).

BIOMEDICAL INSTRUMENTATION, BIOSIGNALS AND IMAGE PROCESSING

BIOINSTRUMENTATION

Modern health care relies heavily on a large array of sophisticated medical instrumentation and sensors to diagnose health problems, to monitor patient condition and administer therapeutic treatments, most often in a non-invasive or minimally-invasive manner. During the past decade, computers have become an essential part of modern bioinstrumentation, from the microprocessor in a single-purpose wearable instrument used to achieve a variety of small tasks to more sophisticated desk-top instruments needed to process the large amount of clinical information acquired from patients. The Biomedical Instrumentation track of our program is focused on training students to design, test, and use sensors and biomedical instrumentation to further enhance the quality of health care. Emphasis is placed both on understanding the physiological systems involved in the generation of the measured variable or affected by therapeutic equipment, as well as the engineering principles of biomedical sensors and biomedical devices.

Examples of common biomedical instrumentations used routinely in medicine include:

- Specialized instrumentation for genetic testing.
- Electrocardiography to measure the electrical activity of the heart.
- Electroencephalography to measure the electrical activities of the brain.
- Electromyography to measure the electrical activities of muscles.
- Mechanical respirators.
- Cardiac pacemakers.
- Defibrillators.
- An artificial heart.
- Heart-lung machines.
- Pulse oximeters.
- Drug infusion and insulin pumps.
- Electrosurgical equipment.
- Anesthesia equipment.
- Kidney dialysis machines.
- Artificial electronic prosthetics used by disabled people (e.g. hearing aids).
- Laser systems for minimally invasive surgery.

BIOSIGNALS

Biosignal processing involves the collection and analysis of data from patients or experiments to identify and extract distinct components of the data set that may lead to better understanding of the processes involved in physiological regulation. For

example, identifying and quantifying differences in the dynamic characteristics of physiological function between normal and diseased conditions utilizing biosignal processing techniques may lead to a better understanding of the role of regulatory imbalance in diseased conditions, and should have important clinical and diagnostic and prognostic application.

Examples of biosignal processing include:

- Detection of malignant heart rhythms from electrocardiograms.
- Early detection of sudden cardiac death.
- Monitoring of vital signs.
- Seizure detection using electroencephalogram recordings.
- Real-time control of artificial prosthetics.
- Real-time control of robotic movements.
- Early detection of hypertension and onset of diabetes.
- Wireless transmission of diagnostic devices.
- Modeling of pharmacokinetics and design of algorithms for robust drug delivery.
- Bioinformatics.
- Pattern recognition and decision support systems.
- Artificial intelligence.

IMAGE PROCESSING

Biomedical image processing involves the application of quantitative science and engineering to detect and visualize biological processes. An important area is the application of these tools to the study of diseases with an ultimate goal of aiding medical intervention. While x-ray imaging is an obvious and familiar example with tremendous diagnostic utility, it represents only a small aspect of this important field. Biomedical engineers are active participants in the development of new imaging modalities to acquire and process images from the body, most often in a non-invasive or minimally-invasive manner.

Examples of biomedical imaging and image processing include:

- X-ray imaging and computer-aided tomography (CAT).
- Visible light and optical imaging.
- Near-infrared imaging.
- Magnetic resonance imaging (MRI).
- Ultrasound imaging.
- Nuclear medicine imaging.
- Luminescence-based imaging.

BIOMATERIALS AND TISSUE ENGINEERING

BIOMATERIALS

Biomaterials is a specialization within biomedical engineering that integrates engineering fundamentals in materials science with principles of cell biology, chemistry and physiology to aid in the design and development of materials used in the production of medical devices. When most people first think of biomaterials, implants such as surgical sutures, artificial hips or pacemakers generally come to mind, but many other aspects are included in this diverse field of study:

- **Biomaterials Design** – Identify the physiological and engineering criteria that an implantable biomaterial must meet. Select the proper chemical composition to insure that the biomaterial imparts the desired mechanical properties and evokes the appropriate tissue response for the specified application.
- **Mechanics of Biomaterials** – Characterize the magnitude and nature of the mechanical properties of biomaterials. Predict and measure how the physical/structural properties of a biomaterial determine its mechanical properties.
- **Biomaterials-Tissue Interactions** – Examine the molecular, cellular and tissue responses to implanted medical devices. Design biomaterials with properties that induce the desired wound healing and tissue remodeling responses from the body.

Biomaterials research and development has improved our health care in many ways including:

- Design and manufacture of replacement parts for damaged or diseased tissues and organs (e.g., artificial hip joints, kidney dialysis machines)
- Improved wound healing (e.g., sutures, wound dressings)
- Enhanced performance of medical devices (e.g., contact lenses, pacemakers)
- Correct functional abnormalities (e.g., spinal rods)
- Correct cosmetic problems (e.g., reconstructive mammaplasty, chin augmentation)
- Aid in clinical diagnostics (e.g., probes and catheters)
- Aid in clinical treatments (e.g., cardiac stents, drains and catheters)
- Design biodegradable scaffolds for tissue engineering (e.g., dermal analogs)

TISSUE ENGINEERING

Tissue engineering integrates the principles and methods of engineering with the fundamentals of life sciences towards the development of biological substitutes to restore, maintain or improve tissue/organ function. When most people first think of tissue engineering, artificial skin and cartilage generally comes to mind, but many other aspects are included in this diverse field of study:

- **Scaffold/Biomaterial Design** – Identify the physiological and engineering criteria that a biodegradable scaffold must meet. Select the proper biochemical composition to insure that the cells perform in a physiologic manner on the surface of the scaffold.
- **Functional/Biomechanical Tissue Engineering** – Characterize the roles of biomechanical stimuli on the growth and development of bioengineered cells, tissues and organs. Measure the biomechanical properties of bioengineered tissues and organs.
- **Bioreactor Design** – Design reactors that control the rates at which nutrients and growth factors are supplied to bioengineered tissues and organs during growth and development in a laboratory environment.

ADJUNCT INSTRUCTOR: W. Towner

The School of Business at WPI is nationally acclaimed. The School's numerous national rankings derive partially from the project enriched curriculum required of all WPI undergraduate students, as well as the emphasis on innovation, entrepreneurship, and technology that is found throughout the Business School's undergraduate and graduate programs.

MISSION STATEMENT

The School of Business at WPI is rooted in WPI's strengths in technology, engineering, and science, and known for developing innovative and entrepreneurial leaders for a global technological world. We focus on:

- Creating and leading technology-based organizations;
- Innovating technology-based processes, products, and services; and
- Integrating technology into the workplace.

We emphasize:

- Innovative and project-based education that integrates the theory and the practice of management, and prepares students to assume positions of leadership in an increasingly global business environment;
- Basic scholarship, while also valuing the scholarship of application and the scholarship of instruction; and
- Interaction with the wider community focused primarily on technological innovation and both individual and organizational entrepreneurship.

COURSE AREAS

The School of Business covers all the functional areas of business. Courses with the following prefixes are found within the School:

ACC	Accounting
BUS	Business, including all Foundation Courses
ETR	Entrepreneurship
FIN	Finance
MIS	Management Information Systems
MKT	Marketing
OIE	Operations & Industrial Engineering
OBC	Organizational Behavior and Change

MANAGEMENT (MG)

EDUCATIONAL OBJECTIVES

Objectives of the Management Major are:

- To prepare students for management roles in technology-based organizations.
- Through a flexible curriculum, to provide a solid, broad base of business knowledge and the written communication, oral presentation, decision-making, and leadership skills necessary to succeed in a technology-based environment.
- To develop student abilities necessary for continued career growth including:
 - the ability to integrate theory and practice;
 - the ability to integrate technology and change into existing organizations;
 - the ability to think critically and analytically, to define and solve business problems, work in teams, and think globally; and
 - the ability to learn new skills in response to changing professional requirements.

Program Distribution Requirements for the Management Major

REQUIREMENTS (NOTE 1)	MINIMUM UNITS
1. Business Foundation (Note 2)	11/3
2. Mathematics (Note 3)	4/3
3. Basic Science	2/3
4. Management Major (Note 4)	6/3
5. Breadth Electives (Note 5)	3/3
6. Computer Science (Note 6)	1/3
7. MG MQP	3/3

NOTES:

1. Courses may not be counted more than once in meeting these distribution requirements. The total number of units taken in the School of Business may not exceed 50% of the total number of units earned for the degree.
2. The Business Foundation consists of BUS 1010: Leadership Practice; BUS 1020: Global Environment of Business Decisions; BUS 2020: The Legal Environment of Business Decisions; BUS 2060: Financial Statements for Decision Making; BUS 2070: Risk Analysis for Decision Making; BUS 2080: Data Analysis for Decision Making; BUS 3010: Creating Value through Innovation; BUS 3020: Achieving Effective Operations; BUS 4030: Achieving Strategic Effectiveness. Microeconomics and Macroeconomics are required and also fulfill the WPI Social Science requirement.
3. Mathematics must include 2/3 units of calculus and 2/3 units of statistics.
4. Students selecting the Management Major must complete six courses from no more than three areas listed below:
 - ACCOUNTING & FINANCE: ACC 4200, FIN 2250, FIN 2260
 - ENTREPRENEURSHIP: ETR 3633, ETR 3910, ETR 3920, ETR 4930
 - MARKETING: MKT 3640, MKT 3651
 - ORGANIZATIONAL BEHAVIOR: OBC 3354, OBC 4366
 - ECONOMICS: ECON 1130, ECON 2110, ECON 2117, ECON 2120, ECON 2125, ECON 2135
 - LAW: GOV 1310, GOV 2310, GOV 2311, GOV 2312, GOV 2313, GOV 2314
 - PSYCHOLOGY: PSY 1401, PSY 1402, PSY 1504, PSY 2406

Additionally, the MQP must be related in some way to the courses taken.

Students may also work with their academic advisor to create a custom MG Program. Such custom programs must be approved by the advisor and the School of Business Undergraduate Policy and Curriculum Committee.

5. Breadth Electives must include at least 1/3 unit from among the 3000- and 4000-level courses in the School. The remaining 2/3 units specified in the requirement may be satisfied with courses from Mathematics, Basic Science, Computer Science, Social Science, or courses with any of the following prefixes: ACC, BUS, ETR, FIN, MIS, MKT, OBC, or OIE.
6. A minimum of 1/3 unit of Computer Science (except CS 2022 and CS 3043). CS 1101, CS 1102, or CS 110X is recommended.

MANAGEMENT ENGINEERING (MGE)

EDUCATIONAL OBJECTIVES

Objectives of the Management Engineering Major are:

- To prepare students for management challenges in key areas that increasingly require proficiency in the technical aspects of business such as production and service operations.
- To provide the knowledge and skills necessary to succeed professionally, including literacy in a technical field, a broad understanding of management issues, written communication, oral presentation, decision-making, and leadership skills required to create new and improved products, processes and control systems.
- To develop student abilities necessary for continued career growth including:
 - the ability to integrate theory and practice and to apply knowledge of technical issues with the foundations of management;
 - the ability to integrate technology and change into existing organizations;
 - the ability to think critically and analytically, to define and solve business problems, work in teams, and think globally; and
 - the ability to learn new skills in response to changing professional requirements.

Program Distribution Requirements for the Management Engineering Major

REQUIREMENTS (NOTE 1)	MINIMUM UNITS
1. Business Foundation (Note 2)	11/3
2. Mathematics (Note 3)	4/3
3. Basic Science	2/3
4. Management Engineering Major (Note 4)	6/3
5. Breadth Electives (Note 5)	3/3
6. Computer Science (Note 6)	1/3
7. MGE MQP	3/3

NOTES:

1. Courses may not be counted more than once in meeting these distribution requirements. The total number of units taken in the School of Business may not exceed 50% of the total number of units earned for the degree.
2. The Business Foundation consists of BUS 1010: Leadership Practice; BUS 1020: Global Environment of Business Decisions; BUS 2020: The Legal Environment of Business Decisions; BUS 2060: Financial Statements for Decision Making; BUS 2070: Risk Analysis for Decision Making; BUS 2080: Data Analysis for Decision Making; BUS 3010: Creating Value through Innovation; BUS 3020: Achieving Effective Operations; BUS 4030: Achieving Strategic Effectiveness. Microeconomics and Macroeconomics are required and also fulfill the WPI Social Science requirement.
3. Mathematics must include 2/3 units of calculus and 2/3 units of statistics.
4. Students selecting the Management Engineering Major must complete six courses from one of the concentrations as specified below:

Operations Management Concentration – 2 units

Complete the following four courses	OBC 3354 OIE 3410 OIE 3420 OIE 4460	and	Select two courses from among:	ACC 4200 CS 2118 MIS 3720 MKT 3640 OBC 4366 OIE 3510
--	--	------------	---------------------------------------	---

The MQP must have an Operations Management focus.

Biomedical Engineering Concentration – 2 units

Complete at least one course, but no more than two, from among:	ETR 3910 ETR 3920 ETR 4930 MKT 3640 MKT 3651 OIE 3410 OIE 3420 OIE 3510 OBC 3354 OBC 4366	and	Select at least four courses, but no more than five, from among:	BME 1001 BME 2210 BME 2511 BME 2811 BME 3300 BB 3101 BB 3102
---	--	------------	--	--

The MQP must have a business focus related to Biomedical Engineering.

Chemistry Concentration – 2 units

Complete at least one course, but no more than two, from among:	ETR 3910 ETR 3920 ETR 4930 MKT 3640 MKT 3651 OIE 3410 OIE 3420 OIE 3510 OBC 3354 OBC 4366	and	Select at least four courses, but no more than five, from among:	CH1030 CH1040 CH2310 CH2320 CH2330 CH2360 CH2640 CH3510
---	--	------------	--	--

The MQP must have a business focus related to Chemistry.

Students pursuing the Chemistry Concentration must complete CH1010 and CH1020 for their basic science requirement. This may not be double counted as part of the Chemistry Concentration.

Civil Engineering Concentration – 2 units

Complete at least one course, but no more than two, from among:	ETR 3910 ETR 3920 ETR 4930 MKT 3640 MKT 3651 OIE 3410 OIE 3420 OIE 3510 OBC 3354 OBC 4366	and	Select at least four courses, but no more than five, from among:	CE 1030 CE 2000 CE 2001 CE 2020 CE 3020 CE 3021 CE 3022 CE 3023 CE 3030 CE 3031 CE 3041 ES 3004
---	--	------------	--	--

The MQP must have a business focus related to Civil Engineering.

Electrical and Computer Engineering Concentration – 2 units

Complete at least one course, but no more than two, from among:	ETR 3910 ETR 3920 ETR 4930 MKT 3640 MKT 3651 OIE 3410 OIE 3420 OIE 3510 OBC 3354 OBC 4366	and	Select at least four courses, but no more than five, from among:	ECE 2010 ECE 2019 ECE 2029 ECE 2049 ECE 2112 ECE 2311 ECE 2312 ECE 2799
---	--	------------	--	--

The MQP must have a business focus related to Electrical and Computer Engineering.

Mechanical Engineering Concentration – 2 units

Complete at least one course, but no more than two, from among:	ETR 3910 ETR 3920 ETR 4930 MKT 3640 MKT 3651 OIE 3410 OIE 3420 OIE 3510 OBC 3354 OBC 4366	and	Select at least four courses, but no more than five, from among:	ES 2001 ES 2501 ES 2502 ES 2503 ES 3001 ES 3003 ES 3004 ME 1800 ME 2300 ME 2820 ME 3820 ME 3901 ME 4320 ME 4429 ME 4430
---	--	------------	--	---

The MQP must have a business focus related to Mechanical Engineering.

Manufacturing Engineering Concentration – 2 units

Complete at least one course, but no more than two, from among:	ETR 3910 ETR 3920 ETR 4930 MKT 3640 MKT 3651 OIE 3410 OIE 3420 OIE 3460 OBC 3354 OBC 4366	and	Select at least four courses, but no more than five, from among:	ES 2001 ME 1800 ME 2820 ME 3320 ME 3820 ME 4718 ME 4810 ME 4813 ME 4814 ME 4815 ME 4821 ME 4875
---	--	------------	--	--

The MQP must have a business focus related to Manufacturing Engineering.

Students may also work with their academic advisor to create a custom MGE Program. Such custom programs must be approved by the advisor and the School of Business Undergraduate Policy & Curriculum Committee.

- Breadth Electives must include at least 1/3 unit from among the 3000- and 4000-level courses in the School. The remaining 2/3 units specified in the requirement may be satisfied with courses from Mathematics, Basic Science, Computer Science, Social Science, or courses with any of the following prefixes: ACC, BUS, ETR, FIN, MIS, MKT, OBC, or OIE.
- A minimum of 1/3 unit of Computer Science (except CS 2022 and CS 3043). CS 1101, CS 1102, or CS 110X is recommended.

MANAGEMENT INFORMATION SYSTEMS (MIS)

EDUCATIONAL OBJECTIVES

The objectives of the Management Information Systems Major are:

- To prepare students for positions involving the design and deployment of business applications using a wide variety of advanced information technologies, especially in high technology business, consulting, and service firms, in either start-up or established environments, and to prepare students for rapid advancement to project management and other management positions.
- To provide the knowledge and skills consistent with the professionally accepted IS curriculum guidelines. Specifically, this includes providing knowledge and skills related to:
 - business application development tools;
 - database, web-based and networked applications;
 - integrating IT into existing organizations through managing and leading systems analysis and design projects;
 - communicating effectively via written and oral presentations.

BUSINESS FOUNDATION CHART

Freshman and Sophomore Courses

Junior and Senior Courses

ECON 1110 and
ECON 1120

BUS 1010 Leadership
Practice

BUS 1020 Global
Environment of Business
Decisions

BUS 2020 Legal
Environment of Business
Decisions

Humanities &
Arts (6 courses)

PE (4 courses)

I. Business Context and Mindsets Cluster

BUS 2060 Financial
Statements for Decision
Making

BUS 2070 Risk Analysis
for Decision Making

BUS 2080 Data Analysis
for Decision Making

II. Business Managerial Tools Cluster

BUS 3010 Creating Value
through Innovation

BUS 3020 Achieving
Effective Operations

BUS 4030 Achieving
Strategic Effectiveness

III. Business Execution Cluster

I
Q
P
(3 courses)

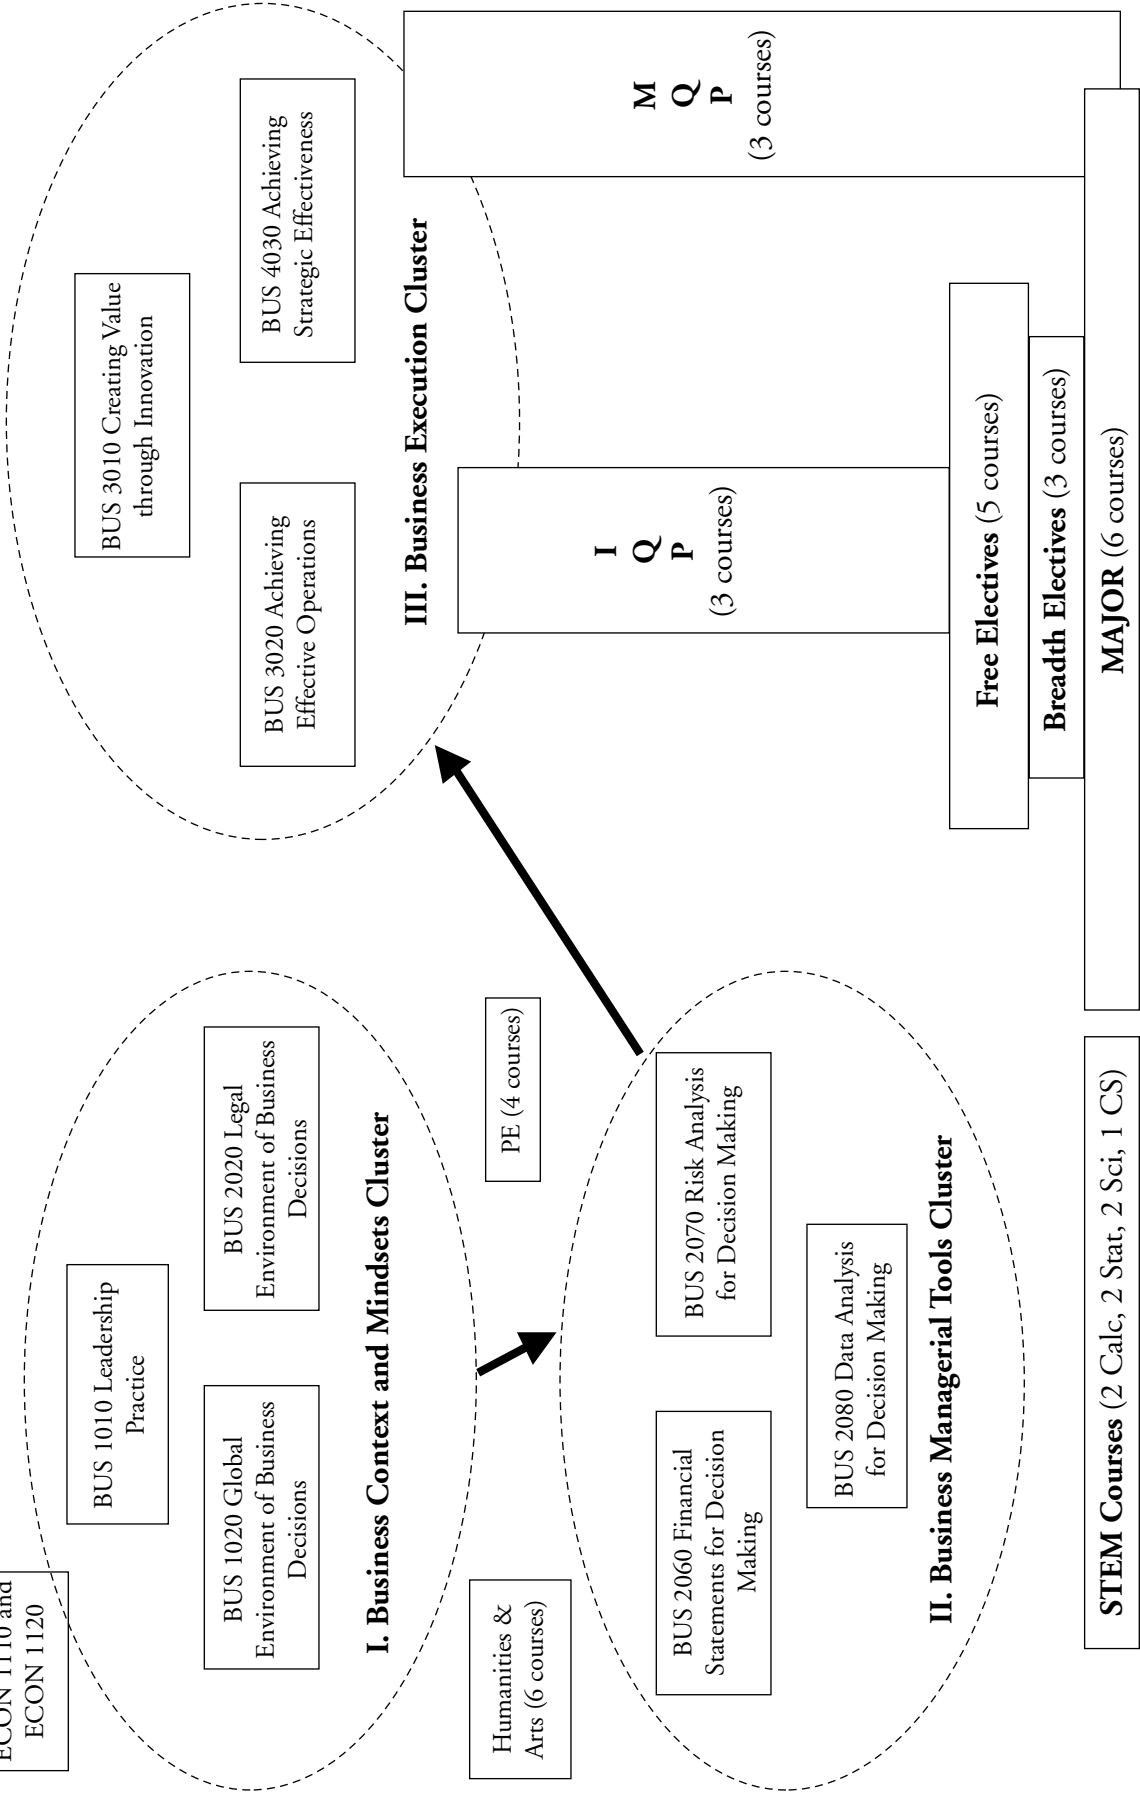

M
Q
P
(3 courses)

Free Electives (5 courses)

Breadth Electives (3 courses)

MAJOR (6 courses)

STEM Courses (2 Calc, 2 Stat, 2 Sci, 1 CS)

- To develop student abilities necessary for continued career growth including:
 - the ability to integrate theory and practice and to apply knowledge of information technology issues with the foundations of management;
 - the ability to integrate technology and change into existing organizations;
 - the ability to think critically and analytically, to define and solve business problems, work in teams, and think globally; and
 - the ability to learn new skills in response to changing professional requirements.

Program Distribution Requirements for the Management Information Systems Major

REQUIREMENTS (NOTE 1)	MINIMUM UNITS
1. Business Foundation (Note 2)	11/3
2. Mathematics (Note 3)	4/3
3. Basic Science	2/3
4. Management Information Systems Major (Note 4)	6/3
5. Breadth Electives (Note 5)	3/3
6. Computer Science (Note 6)	1/3
7. MIS MQP	3/3

NOTES:

1. Courses may not be counted more than once in meeting these distribution requirements. The total number of units taken in the School of Business may not exceed 50% of the total number of units earned for the degree.
2. The Business Foundation consists of BUS 1010: Leadership Practice; BUS 1020: Global Environment of Business Decisions; BUS 2020: The Legal Environment of Business Decisions; BUS 2060: Financial Statements for Decision Making; BUS 2070: Risk Analysis for Decision Making; BUS 2080: Data Analysis for Decision Making; BUS 3010: Creating Value through Innovation; BUS 3020: Achieving Effective Operations; BUS 4030: Achieving Strategic Effectiveness. Microeconomics and Macroeconomics are required and also fulfill the WPI Social Science requirement.
3. Mathematics must include 2/3 units of calculus and 2/3 units of statistics.
4. Students selecting the Management Information Systems Major must complete six courses as specified below:
 - Complete the following four courses: MIS 3720, MIS 3740, MIS 4720, and CS 2118.
 - Complete two of the following courses: MIS 4741, MIS 4781, CS 2102, CS 2301 or CS 2303, CS 3041.
 - Complete a MQP in MIS.
5. Breadth Electives must include at least 1/3 unit from among the 3000- and 4000-level courses in the School. The remaining 2/3 units specified in the requirement may be satisfied with courses from Mathematics, Basic Science, Computer Science, Social Science, or courses with any of the following prefixes: ACC, BUS, ETR, FIN, MIS, MKT, OBC, or OIE.
6. A minimum of 1/3 unit of Computer Science (except CS 2022 and CS 3043). CS 1101, CS 1102, or CS110X is recommended.

INDUSTRIAL ENGINEERING

EDUCATIONAL OBJECTIVES

The educational objectives of the IE Program include:

- a. **Industrial Engineering Knowledge and Design Skills.** Graduates should be able to support operational decision-making and to design solutions that address the complex and changing industrial engineering problems faced by organizations, using current concepts and technologies.

- b. **Communication Skills.** Graduates should be able to communicate effectively, both orally and in writing.
- c. **Teamwork and Leadership Skills.** Graduates should be able to serve as change agents in a global environment, based on strong interpersonal and teamwork skills, an understanding of professional and ethical responsibility, and a willingness to take the initiative.

Program Distribution Requirements for the Industrial Engineering Major (IE)

The normal period of residency at WPI is 16 terms. In addition to the WPI requirements applicable to all students (see page 7), students wishing to receive the ABET accredited degree designated “Industrial Engineering” must complete a minimum of 10 units of study in the areas of mathematics, basic science, and engineering topics as follows:

REQUIREMENTS	MINIMUM UNITS
Mathematics and Basic Science (Note 1)	12/3
Industrial Engineering Topics (Note 2)	15/3
Capstone Design Experience (IE MQP)	3/3

NOTES:

1. Mathematics and Basic Science:
 - a. Mathematics must include differential and integral calculus, ordinary differential equations, and 2/3 units in probability and statistics.
 - b. Basic Science must include both chemistry and physics.
 - c. 2/3 units of Math/Science Electives
2. Industrial Engineering Topics must include courses in the following three topic areas:
 - a. The IE Core consists of 9/3 units: BUS 1010 (Leadership Practice), BUS 2080 (Data Analysis for Decision Making), BUS 3020 (Achieving Effective Operations), CS 2118 (Object-Oriented Design Concepts for Business Applications), OIE 2850 (Engineering Economics), OIE 3410 (Materials Management in Supply Chains), OIE 3420 (Quality Planning, Design and Control), OIE 3460 (Simulation Modeling and Analysis), and OIE 3510 (Stochastic Models).
 - b. IE Electives (3/3 units): Any 3000- or 4000-level OIE courses; MIS 3720, MIS 4720; and Operations Research courses at the 3000 or 4000 level in Mathematics qualify. Courses in financial modeling and organizational science do not qualify.
 - c. Technical Electives (3/3 units): Any Engineering Science/Design courses qualify. Any designated CE *except* CE 3022, CHE, CS *except* CS 1101, 1102, 3043, ECE, ES, ME, and OIE.

BUSINESS MINOR

Everyone needs management skills. If engineers, scientists, and others hope to advance in their careers, they must learn how to lead projects and manage groups. The Business Minor offers students (other than MG, MGE, or MIS majors, who may take the courses as part of their major or as Breadth or Free Electives, as appropriate) the opportunity to learn some of the theory and practice of managing in organizations with material on management concepts and practices commonly encountered in the business world. This program will help students make a transition to the business world and will provide basic skills for operating effectively in business organizations.

To complete the Business Minor, a student must complete two units of work, typically through course work with the following distribution:

- Select any **five** from the following:
 ECON 1110 OR ECON 1120
 BUS 1010 Leadership Practice
 BUS 1020 Global Environment of Business Decisions
 BUS 2020 The Legal Environment of Business Decisions
 BUS 2060 Financial Statements for Decision Making
 BUS 2070 Risk Analysis for Decision Making
 BUS 2080 Data Analysis for Decision Making
 BUS 3010 Creating Value through Innovation
 BUS 3020 Achieving Effective Operations

- Select **one** of the following two courses:
 BUS 4030 Achieving Strategic Effectiveness
 ETR 4930 Growing and Managing New Ventures

This minor is not available to students in any Management, Management Engineering, or Management Information Systems major at WPI.

For general policy on the Minor, see the description on page 11.

ENTREPRENEURSHIP MINOR

All around the world people are starting their own new business ventures. With its strong heritage of invention and entrepreneurship among students and faculty members, WPI is committed to encouraging its students to consider that career path. Our dream is that our students will earn a minor in Entrepreneurship, which will provide them with some basic business skills and an understanding of what it takes to start a business, then they will create a new and exciting technology as their MQP that they will then turn into a business upon graduation.

Related opportunities include competitions for the following: The Robert H. Grant Invention Awards, the Henry Strage Innovation Award, and the Kalenian Award. Through the Collaborative for Entrepreneurship and Innovation, WPI sponsors the Innovation and Entrepreneurship Club, participates in Global Entrepreneurship Week, and promotes and supports the MassChallenge Competition.

The Minor in Entrepreneurship is available to all students at WPI, regardless of major.

The minor requires the completion of two units of coursework as noted below.

- Complete the following course:
 BUS 2060 Financial Statements for Decision Making
- Complete two (2) from the following list:
 ETR 1100 Engineering Innovation and Entrepreneurship
 ETR 3633 Entrepreneurial Selling
 ETR 3910 Recognizing and Evaluating New Venture Opportunities
 ETR 3920 Planning & Launching New Ventures
- Complete two (2) of the following courses:
 BUS 2070 Risk Analysis for Decision Making
 BUS 3010 Creating Value through Innovation
 MKT 3640 Management of Process and Product Innovation
 GOV 2313 Intellectual Property Law
- Required:
 ETR 4930 Growing and Managing New Ventures

For general policy on the Minor, see the description on page 11.

INDUSTRIAL ENGINEERING MINOR

Industrial Engineering is concerned with efficiency and process improvement, which are vital to any organization's survival and growth in a global, competitive world. Hence, the fundamental skills and knowledge of Industrial Engineering can be utilized in many areas, and are valuable supplements to a student's core competency in his/her chosen major discipline. The IE minor provides an easy link between the curricula in engineering and business and expands students' ability to tackle business decisions and problems using engineering techniques.

The IE minor is available to students in any major at WPI except for those majoring in Industrial Engineering. The minor requires the completion of two units of coursework as outlined below.

- IE Tools. Select two (2):
 BUS 2080 Data Analysis for Decision Making
 OIE 2850 Engineering Economics
 OIE 3460 Simulation Modeling and Analysis
 OIE 3510 Stochastic Models
- IE Knowledge. Select four (4):
 BUS 3020 Achieving Effective Operations
 OIE 3405 Work Systems and Facilities Planning
 OIE 3410 Materials Management in Supply Chains
 OIE 3420 Quality Planning, Design, and Control
 OIE 4410 Case Studies in Industrial Engineering
 OIE 4460 Global Planning and Logistics

For general policy on the Minor, see the description on page 11.

MANAGEMENT INFORMATION SYSTEMS MINOR

Information technology has been the driving force behind the new way of doing business. It has enabled companies to make tremendous strides in productivity, it has opened new markets and new channels, and it has created new product and service opportunities. While one part of the information revolution has been advances in hardware, and another has been advances in software, a third major advance has been in the systems-side of information, or how information is organized and used to make effective decisions. That is Management Information Systems (MIS). The Minor in MIS offers students the opportunity to broaden their disciplinary program with material and skills widely useful in the business world. This program will help students to broaden their exposure to information technology and its use in business and industry.

To complete the Management Information Systems Minor, a student must complete two units of work with the following distribution:

- A total of **three (3)** courses in Business Foundation and Programming Skills, with at least **one (1)** from each group:
 - Business Foundation:
 BUS 1010 Leadership Practice;
 BUS 1020 Global Environment of Business Decisions;
 BUS 2020 The Legal Environment of Business Decisions;
 BUS 2060 Financial Statements for Decision Making;
 BUS 2070 Risk Analysis for Decision Making;
 BUS 2080 Data Analysis for Decision Making;
 BUS 3010 Creating Value through Innovation;
 BUS 3020 Achieving Effective Operations;
 BUS 4030 Achieving Strategic Effectiveness.

B. Programming Skills:

- CS 1101 Introduction to Program Design or
- CS 1102 Accelerated Introduction to Program Design,
- CS 2102 Object Oriented Design Concepts
- CS 2118 Object-Oriented Design Concepts for Business Applications
- CS 2301 Systems Programming for Non-Majors or
- CS 2303 Systems Programming Concepts

2. Two (2) courses from the group of courses:

- MIS 3720 Management of Data;
- MIS 3740 Organizational Application of Telecommunications;
- MIS 4741 User Experience and Design;
- MIS 4781 Information Systems and Technology Policy and Strategy.

3. Required:

- MIS 4720 Systems Analysis and Design

Students majoring in MIS may not take the MIS Minor.

For general policy on the Minor, see the description on page 11.

SOCIAL ENTREPRENEURSHIP MINOR

Social Entrepreneurship is defined as the formation of a new venture that combines social goals and for-profit activity to address social needs through novel solutions. Social entrepreneurs are leaders in that to be effective, they have to identify social problems, work closely with key stakeholders in identifying solutions to those problems, offer a vision for change, communicate clearly and persuasively to others, negotiate for resources from both public and private concerns, involve people in the solutions to problems, and be creative, passionate, and persistent in how they work through various obstacles to progress. It is the purpose of the School of Business Social Entrepreneurship minor to provide students with the theoretical underpinnings of leadership, entrepreneurship, and social innovation. This minor will interest those students for whom the Great Problem Seminar and/or IQP have been an eye-opening experience and who aspire to change the world — or some part of it.

The minor requires the completion of two units of coursework as outlined below.

1. Required:

- BUS 1010 Leadership Practice

2. Select two (2):

- ETR 3633 Entrepreneurial Selling
- ETR 3910 Recognizing and Evaluating New Venture Opportunities
- ETR 3920 Planning and Launching New Ventures
- ETR 4930 Growing and Managing New Ventures

3. Select two (2):

- BUS 1020 Global Environment of Business Decisions
- BUS 2020 Legal Environment of Business Decisions
- ENV 1100 Introduction to Environmental Studies
- ENV 2400 Environmental Problems and Human Behavior
- ENV 2600 Environmental Problems in the Developing World
- ENV 4400 Senior Seminar in Environmental Studies
- OBC 3354 Organizational Behavior and Change
- OBC 4300 Senior Seminar
- PSY 1402 Social Psychology
- PSY 2406 Cross-Cultural Psychology
- SOC 1202 Introduction to Sociology and Cultural Diversity

4. Required:

- OBC 4366 Leadership, Ethics, and Social Entrepreneurship (or a suitable ISP)

The minor in Social Entrepreneurship is available to all students, regardless of major.

For general policy on the Minor, see the description on page 11.

CHEMICAL ENGINEERING

D. DIBIASIO, HEAD

PROFESSORS: R. Datta, A. G. Dixon, Y. H. Ma, R. W. Thompson

ASSOCIATE PROFESSORS: T. A. Camesano, W. M. Clark, D. DiBiasio, N. K. Kazantzis, J. Liang

ASSISTANT PROFESSOR: H. Zhou

RESEARCH ASSOCIATE PROFESSOR: I. Fishtik

RESEARCH ASSISTANT PROFESSOR: I. Mardilovich

ADJUNCT ASSISTANT PROFESSORS: H. W. Nowick, T. Starr, S. Kmiotek

MISSION STATEMENT

The Department of Chemical Engineering at WPI is dedicated to providing excellent education to undergraduate and graduate students in chemical engineering, and to vigorously pursuing discovery, creation, and dissemination of knowledge at the frontiers of chemical engineering. Chemical engineers are uniquely positioned to continue to contribute to the betterment of society through advancements in new materials, biomedicine, alternative energy, transportation, environmental pollution abatement, resource conservation, and sustainable development. The Department aspires to contribute to this vision by achieving national distinction in selected areas of scholarly inquiry and by educating men and women to become leaders in industrial practice, civil service, education, and research. The Department strives to produce technically competent and socially aware chemical engineers through project-based, innovative, and rigorous educational programs that promote global and societal awareness, innovative thinking, and life-long learning skills.

PROGRAM EDUCATIONAL OBJECTIVES

The Chemical Engineering Department has established the following objectives of the undergraduate program in support of our mission and that of the Institute.

1. To educate students in the fundamental principles of chemical engineering.
2. To help students develop the ability to use chemical engineering principles to solve problems of practical importance to society.
3. To help prepare students, through broad education, for a lifetime of success as productive and informed members of society as well as of their professional community.
4. To help students become effective communicators.

PROGRAM OUTCOMES

The Chemical Engineering Department has established fifteen educational outcomes in support of our objectives. The outcomes are grouped under the objectives that they support.

Objective 1

- 1.1 Chemical engineering graduates will possess a working knowledge of the fundamentals of chemistry, physics, and mathematics, including knowledge of advanced elective science subjects such as organic and inorganic chemistry, material science, and biochemistry, etc.
- 1.2 Chemical engineering graduates will possess a working knowledge of conservation principles and their applications, physical and chemical equilibria, transport and rate processes, separation processes, chemical process control, and reaction engineering.

Objective 2

- 2.1 Chemical engineering graduates will be able to formulate, analyze, and solve practical chemical engineering problems.
- 2.2 Chemical engineering graduates will be able to design experiments, safely gather and analyze data, and apply the results to address practical chemical engineering problems.
- 2.3 Chemical engineering graduates will be able to use appropriate mathematical concepts and methods to solve chemical engineering problems.
- 2.4 Chemical engineering graduates will be able to design a chemical system, process, or component with consideration of realistic constraints including practical, economic, environmental, safety, ethical, social, and political implications.
- 2.5 Chemical engineering graduates will be able to use computers effectively for solving chemical engineering problems.

Objective 3

- 3.1 Chemical engineering graduates will be able to function and work effectively alone and in a team environment, including multidisciplinary teams.
- 3.2 Chemical engineering graduates will possess an appreciation of professional, ethical, and contemporary issues, and the societal and global impact of chemical engineering processes.
- 3.3 Chemical engineering graduates will possess self-learning skills to ensure life-long learning.
- 3.4 Chemical engineering graduates will possess an appreciation for the humanities and social sciences.
- 3.5 Chemical engineering graduates will be able to use their chemical engineering education to serve the chemical engineering profession or a related profession or pursue advanced studies.
- 3.6 Chemical engineering graduates will have selected technical elective courses, concentrations, projects, and minors that satisfy their professional interest or career goals.

Objective 4

- 4.1 Chemical engineering graduates will be able to write coherent, concise, and accurate technical reports.
- 4.2 Chemical engineering graduates will be able to make concise and effective oral presentations.

Program Distribution Requirements for the Chemical Engineering Major

The normal period of residency at WPI is 16 terms. In addition to the WPI requirements applicable to all students (see page 7), students wishing to receive the ABET-accredited degree designated "Chemical Engineering" must satisfy the distribution requirements shown below.

REQUIREMENTS	MINIMUM UNITS
1. Mathematics and Base Science (Notes 1 and 2)	4
2. Engineering Science and Design (Notes 3 and 4)	6
3. Advanced Chemistry and Natural Science (Note 5)	5/3

NOTES:

1. Must include differential and integral calculus and differential equations.
2. Must include 3 courses in chemistry, 2 courses in physics and 1 course in biology or biochemistry.
3. Must include 1 unit of MQR, 1/3 unit of capstone design experience (e.g. CHE 4404), and at least 1/3 unit of engineering study outside the major. Courses used to satisfy this requirement must be at the 2000 level or above, with the exception of CHE 1011.
4. Must include at least 4 units from the following list of core chemical engineering courses: CHE 2011, CHE 2012, CHE 2013, CHE 2014, ES 3004, ES 3003, ES 3002, CHE 3201, CHE 3501, CHE 4401, CHE 4402, CHE 4403, CHE 4404, CHE 4405.
5. Advanced chemistry and natural science courses are defined as any 2000 level and above BB, CH, PH, or GE course and CH 1040. Must include 3 advanced CH courses at 2000 level or above. Up to 2/3 unit of advanced chemistry and natural science may be double counted under requirements 1 and 3.

CONCENTRATIONS FOR CHEMICAL ENGINEERING MAJORS

Chemical engineering majors may choose to focus their studies by obtaining one of the following Concentrations: Biochemical, Biomedical, Environmental, or Materials.

CHEMICAL ENGINEERING WITH BIOCHEMICAL CONCENTRATION**Basic Science:**

Any BB course. No more than one 1000 level course may be counted, however. Recommended courses include:

BB 2002	Microbiology
BB 2550	Cell Biology
BB 4008	Cell Culture Theory and Applications
BB 560	Separation of Biological Molecules

Engineering Science and Design:

BB 509	Scale-Up of Bioprocessing
CHE 3301	Introduction to Biological Engineering
CHE 521	Biochemical Engineering
BME 1001	Introduction to Biomedical Engineering

Advanced Chemistry:

CH 4110	Biochemistry I
CH 4120	Biochemistry II
CH 4130	Biochemistry III
BB 4910	Advanced Molecular Biology

CHEMICAL ENGINEERING WITH BIOMEDICAL CONCENTRATION

No more than one 1000-level course may be counted. Recommended courses include:

Basic Science:

- (at most, one of these three)* {
- BB 1035 Introduction to Biotechnology
 - BB 2550 Cell Biology
 - BB 1025 Human Biology
 - BB 3102 Human Anatomy & Physiology: Transport and Maintenance
 - BB 4065 Virology

Engineering Science and Design:

- BME 1001 Introduction to Biomedical Engineering
- BME 2511 Introduction to Biomechanics and Biotransport
- BME/ME 4504 Biomechanics
- BME/ME 4606 Biofluids
- BME/ME 4814 Biomaterials
- CHE 3301 Introduction to Biological Engineering

CHEMICAL ENGINEERING WITH ENVIRONMENTAL CONCENTRATION

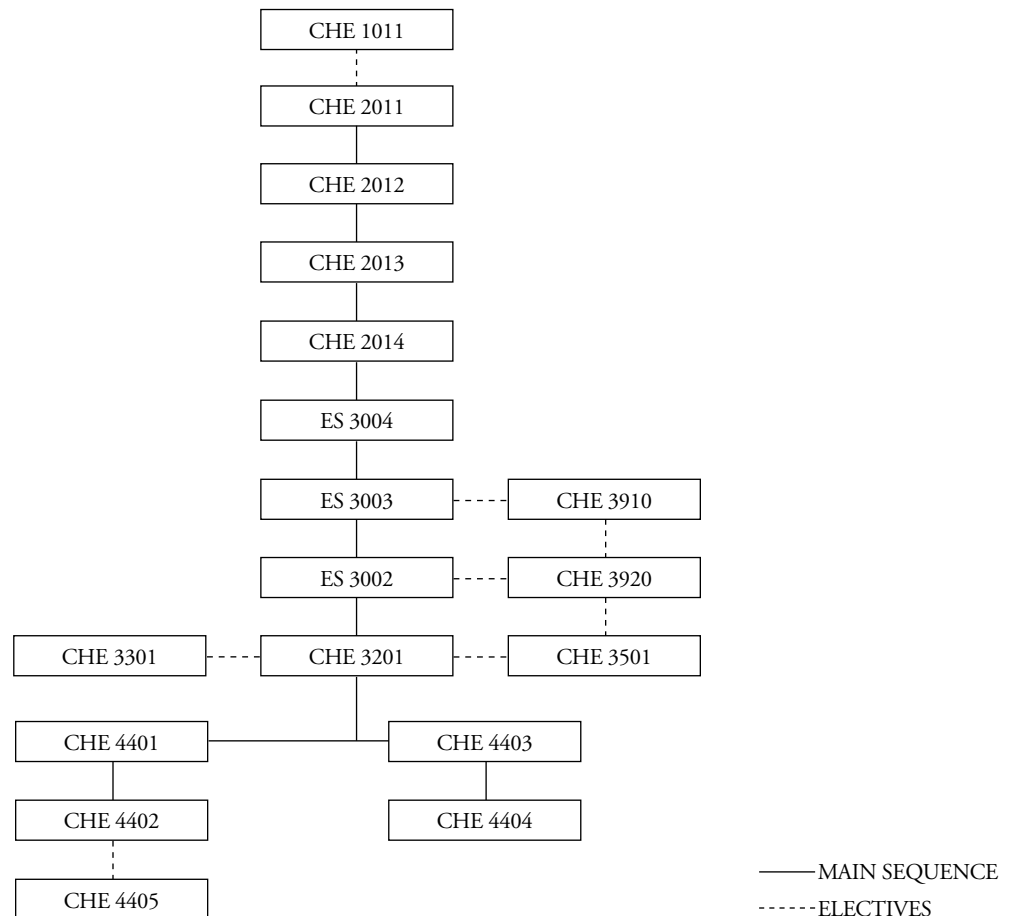

Basic Science:

- GE 2341 Geology
- BB 2040 Principles of Ecology

Engineering Science and Design:

- CHE 3301 Introduction to Biological Engineering
 - CHE 3910 Chemical and Environmental Technology
 - CHE 3920 Air Quality Management
 - CHE/CEE 4063 Transport and Transformations in the Environment
 - CE 3059 Environmental Engineering
 - CE 3070 Introduction to Urban and Environmental Planning
 - CE 3074 Environmental Analysis
 - CE 3060 Water Treatment
 - CE 3061 Waste Water Treatment
 - CE 4060 Environmental Engineering Lab
 - CE 4061 Hydrology
- (at most, one of these three)* {

CHEMICAL ENGINEERING SUGGESTED COURSE SEQUENCE

CHEMICAL ENGINEERING WITH MATERIALS CONCENTRATION

Engineering Science and Design:

ES 2001	Introduction to Material Science
CHE 508	Catalysis and Surface Science of Materials
ME 2820	Materials Processing
ME 3801	Experimental Methods in Material Science and Engineering
ME 4814	Biomaterials
ME 4821	Chemistry, Properties, and Processing of Plastics
ME 4840	Physical Metallurgy
ME 48xx	(Materials courses as approved)

PROJECT OPPORTUNITIES

Projects available to the chemical engineering student are of the widest possible variety. Projects may be of the research type (as would be encountered in graduate school) or of a more developmental, industrial nature. Nonexperimental design projects or theoretical projects are also available. They are available on campus, sometimes with graduate students working on sponsored research; in off-campus governmental laboratories; or in industry, as well as overseas.

Areas of specialization in the department currently are:

Adsorption	Kinetics
Biochemical Engineering	Mass Transfer
Biofilms	Materials Synthesis
Biominiaturization	Microfluidics
Bioremediation	Molecular Modeling
Biosensors	Process Dynamics,
Biotechnology	Supervision and Control
Catalysis	Reaction Engineering
Diffusion	Scientific Computing
Drug Delivery	Separation Processes
Fuel Cells	Thermodynamics
Hydrogen Technology	Water Remediation
Inorganic Membranes	Zeolites

CHEMISTRY AND BIOCHEMISTRY

A. GERICKE, HEAD; R. E. CONNORS, ASSOCIATE HEAD

PROFESSORS: J.M. Arguello, R.E. Connors, J.P. Dittami, A. Gericke

ASSOCIATE PROFESSORS: G. Kaminski, J.C. MacDonald, K.N. Wobbe

ASSISTANT PROFESSORS: S.C. Burdette, R. Dempski, M.H. Emmert

MISSION STATEMENT

Through dynamic and innovative classroom instruction and exciting cutting edge research programs, the Department of Chemistry and Biochemistry strives to provide students with both a broad understanding of the fundamentals of the chemical sciences and an opportunity to create new chemical and biochemical knowledge through original research. We aspire to produce graduates who will enter their scientific careers with the confidence and competence to lead the advance of chemistry and biochemistry in the 21st century.

PROGRAM EDUCATIONAL OBJECTIVES

The Department of Chemistry and Biochemistry will graduate outstanding professionals possessing fundamental knowledge of the chemical sciences. Graduates will be able to apply this knowledge to the solution of problems in chemistry and biochemistry for the advancement of knowledge in these fields and the improvement of the standard of living of all humanity.

PROGRAM OUTCOMES

Students graduating with a major in Chemistry or Biochemistry will be able to demonstrate an ability to:

- perform accurate and precise quantitative measurements
- use and understand modern instruments, particularly NMR, IR, and UV-vis spectrometers, chromatographs, electrochemical instruments, and lab computers
- keep legible and complete experimental records
- analyze data statistically and assess reliability of results
- anticipate, recognize, and respond properly to hazards of chemical manipulations
- interpret experimental results and draw reasonable conclusions
- plan and execute experiments through use of the literature
- design experiments
- communicate effectively through oral and written reports
- critically assess their work for reasonableness and self-consistency
- adhere to high ethical standards
- learn independently

BIOCHEMISTRY

Program Distribution Requirements for the Biochemistry Major

In addition to the WPI requirements applicable to all students (see page 7), students wishing to graduate with a degree in biochemistry must meet the distribution requirements detailed below.

REQUIREMENTS	MINIMUM UNITS
1. Mathematics and Physics (Note 1).	2
2. Chemistry and Biochemistry (Note 2).	4 1/3
3. Biology (Note 3).	1 1/3
4. Chemistry and Biochemistry/ Biology Laboratory (Note 4).	1
5. Other Natural or Computer Science (Note 5).	1/3
6. MQP	1

NOTES:

1. The mathematics in MA 1021-MA 1024 or the equivalent is recommended. The physics in PH 1110-PH 1120 or equivalent is recommended.
2. These 4 1/3 units must include one unit of organic, 1 1/3 units of biochemistry, and 1/3 unit each of physical (3000 level or higher) and inorganic chemistry (3000 level or higher).
3. These 1 1/3 units must include 1/3 unit of cell biology, 1/3 unit of genetics, and 1/3 unit of advanced work (3000 level or higher).
4. This unit must include a minimum of 2/3 units of Chemistry and Biochemistry labs, of which 1/3 unit must be either CH 4150 or CH 4170. The remaining 1/3 unit may come from BB or CBC labs. However, counting both CH 4150 and any of BB 3518, BB 3519, or BB 3516 is not allowed. Likewise, counting both CH 4170 and any of BB 3512, BB 3518, or BB 3520 is not allowed.
5. Any course in the natural sciences (not used to satisfy another requirement) or in computer science may be used to satisfy this requirement.

RECOMMENDATIONS FOR STUDENTS

A typical Biochemistry curriculum is given below.

Premedical students should take three terms of Physics, as well as one of the Organic Chemistry Laboratories (CH 2360 or CH 2660), by the end of their third year. BB 1035 is recommended as the initial course for students who need to strengthen their background in biology. Note that a total of one unit designated Elective in the table must be in Biology.

Students should take 1/3 unit of advanced Biology laboratory (BB 3512, 3518, 3519, 3520 are recommended) at their discretion as to the term; however, this should preferably be done before the MQP is commenced.

Recommended Biochemistry Program

Year	Term A	Term B	Term C	Term D
First	CH 1010 BB 2550 MA	CH 1020 HU MA	CH 1030 BB 2920 MA	CH 1040 HU MA
Second	CH 3510 CH 2640 HU	CH 2310 SS HU	CH 2320 HU PH	CH 2330 HU PH
Third	CH 4110 BB Lab SS	CH 4120 CH 4150 IQP	CH 4130 CH 3410 IQP	CH 4170 Elective IQP
Fourth	Elective MQP Elective	Elective MQP Elective	CH 4160 MQP Elective	CH 4190 MQP Elective

ASSOCIATED BIOCHEMISTRY FACULTY

D. S. Adams (BB), M. Buckholt (BB), J. Duffy (BB), S. M. Politz (BB), R. Prusty-Rao (BB), J. Rulfs (BB), E. Ryder (BB), P. J. Weathers (BB)

CHEMISTRY**Program Distribution Requirements for the Chemistry Major**

In addition to the WPI requirements applicable to all students (see page 7), students wishing to graduate with a degree in chemistry must meet the distribution requirements detailed below.

REQUIREMENTS	MINIMUM UNITS
1. Mathematics and Physics (Note 1).	2 1/3
2. Chemistry (Notes 2, 3).	4
3. Additional Science/Engineering (Notes 3, 4).	3 2/3

NOTES:

- Must include differential and integral calculus and at least 2/3 units of physics.
- Must be above the level of general chemistry (2000 level or higher). These 4 units must include courses in experimental chemistry (either 4/3 unit or 3/3 unit), inorganic chemistry (1/3 unit), organic chemistry (3/3 unit), physical chemistry (3/3 unit), and biochemistry (either 1/3 unit or 2/3 unit, depending on the number of experimental chemistry courses taken). At least 2/3 units must be at or higher than the 4000 level.
- Students cannot receive credit for both CH 2360 and CH 2660.
- Distributed among the MQP, the natural and physical sciences, computer science, mathematics, and engineering (and including general chemistry, CH 1010-1040).

RECOMMENDATIONS FOR STUDENTS

Chemistry utilizes many of the concepts of physics and the tools of mathematics. Thus students should acquire a background in these subjects early in their programs. The material addressed in MA 1021 through MA 1024 is recommended for all chemistry majors. Students will also benefit from knowledge of differential equations, as discussed in MA 2051. Physics background should include mechanics, and electricity and magnetism. Either the PH 1110-1120 or the PH 1111-1121 sequence is recommended. Students seeking more depth in physics are advised to pursue PH 1130 and PH 1140.

Students seeking ACS certification (see below) should plan to study calculus through introductory multivariable calculus (MA 1021-1024), differential equations (MA 2051) and linear algebra (MA 2071), and should take a minimum of two courses in physics (for example, PH 1111 and PH 1121).

AMERICAN CHEMICAL SOCIETY APPROVAL AND CERTIFICATION

The Department of Chemistry and Biochemistry has an American Chemical Society (ACS) approved program. Thus graduates who complete programs satisfying the ACS recommendations have their degrees certified to the society by the department. Accordingly, students can earn an "ACS-Certified Degree in Chemistry" or an "ACS-Certified Degree in Chemistry with a Biochemistry Option."

ACS-Certified graduates are eligible for immediate membership in the ACS and thus are able to secure the benefits of membership, which include helpful services such as finding employment.

ACS-CERTIFIED DEGREE IN CHEMISTRY

The following sequence of courses, recommended to provide fundamental background in chemistry, will result in an ACS-certified degree in chemistry. Specialization in particular areas of interest is best accomplished via additional courses and projects, generally taken in the third and fourth years.

Recommended CBC Courses for an ACS-Certified Degree in Chemistry

Year	Term A	Term B	Term C	Term D
First	CH 1010	CH 1020	CH 1030	CH 1040
Second	CH 2640 (lab) CH 3510 (phys)	CH 2650 (lab) CH 2310 (org)	CH 2660 (lab) CH 2320 (org)	CH 2670 (lab) CH 2330 (org)
Third		CH 3550 (phys)	CH 3410 (inorg) CH 3530 (phys)	
Fourth	CH 4110 (bioch)			CH 4420 (inorg)

ACS-CERTIFIED DEGREE IN CHEMISTRY WITH A BIOCHEMISTRY OPTION

Students seeking the ACS-Certified Degree with Biochemistry Option must complete the following work in addition to those requirements noted above for an ACS-Certified Degree in Chemistry.

- 1/3 unit of biology which contains cell biology, microbiology or genetics.
- 2/3 unit of biochemistry that has organic chemistry as a prerequisite.

- 1/3 unit of a laboratory in biochemical methods.
- Research in biochemistry culminating in a comprehensive written report is highly recommended.

CONCENTRATION IN MEDICINAL CHEMISTRY

Medicinal Chemistry is the application of principles of biology and chemistry to the rational design and synthesis of new drugs for treatment of disease. A medicinal chemist applies knowledge of chemistry, biochemistry and physiology to generate solutions to health-related problems.

A concentration in medicinal chemistry is excellent preparation for students interested in entering health related professions, such as the pharmaceutical industry, upon graduation. Possible employment positions are numerous and expected to increase in the future.

COURSE REQUIREMENTS

In order to be eligible to receive the Medicinal Chemistry designation on their transcripts, chemistry majors need to satisfy the following course requirements:

Three biomedically oriented courses selected from the following list must be included in the distribution requirements:

- CH 4110 Biochemistry I
- CH 4120 Biochemistry II
- CH 4130 Biochemistry III
- CH 4150 Experimental Biochemistry
- CH 4170 Experimental Biochemistry II
- BB 3055 Microbial Physiology

Three courses oriented toward structure, synthesis, or mechanisms selected from the following list must be included in the distribution requirements. (All graduate courses in chemistry are open to undergraduates.)

- CH 4330 Organic Synthesis
- CH 516 Chemical Spectroscopy
- CH 536 Theory and Applications of NMR Spectroscopy
- CH 538 Medicinal Chemistry
- CH 554 Molecular Modeling

In addition to the above course requirements, chemistry majors must complete an MQP in the medicinal chemistry area, approved by the Program Coordinator. Examples of available projects are:

- Synthesis of huperzine analogs. New acetylcholinesterase inhibitors for treatment of Alzheimer's.
- Synthesis of opiate analogs.
- Computer simulations of small molecules and their interactions with proteins.

PROJECT ACTIVITY

A student undertaking a Major Qualifying Project in chemistry and biochemistry chooses a faculty advisor in the department with whom to work. This choice is normally made because the student is interested in the research program directed by the faculty member, and wants to become a part of this activity. The student is given a research problem to work on for a minimum of 20 hours a week for 3 terms. Although most MQP projects in chemistry and biochemistry are individual student efforts, team projects involving up to 3 students are occasionally available, depending on the faculty member concerned. The project

culminates in a formal written MQP report and a poster session presentation to the department faculty and students. MQP projects in chemistry and biochemistry require a substantial effort from the student in both the laboratory and writing phases. Many projects result in professional publications and/or presentations at professional meetings. The department offers a variety of areas of specialization (see AREAS OF SPECIALIZATION IN CHEMISTRY AND BIOCHEMISTRY below) in which Major Qualifying Projects may be carried out.

Some students, particularly those in biochemistry, choose to do their MQPs at off-campus laboratories. Biochemistry projects have recently been completed at the University of Massachusetts Medical Center and Tufts University School of Veterinary Medicine.

AREAS OF SPECIALIZATION IN CHEMISTRY AND BIOCHEMISTRY

Computational Chemistry and Molecular Modeling
Gene Regulation
Ion Transport
Materials
Medicinal Chemistry
Membrane Proteins
Molecular Spectroscopy
Nanoscale Design
Natural Products Synthesis
Animal-Virus Biochemistry
Photochemistry
Photophysics
Sensors
Supramolecular Chemistry

MINOR IN BIOCHEMISTRY

A biochemistry minor allows students to develop real depth of understanding in biochemistry. The minor can include laboratory work, or be entirely classroom based. As biochemistry is a science that utilizes fundamentals from both chemistry and biology, courses from both areas are included. Some knowledge of organic chemistry is required to fully understand biochemistry.

Two units of study are required for the biochemistry minor as follows (note that in accordance with Institutional rules, one full unit, including the capstone, must be independent of distribution requirements for the major). Courses may count in only one area.

1. 1/3 unit of organic chemistry selected from
 - CH 2320
 - CH 2330
 - CH 2360
2. 1/3 unit of biology focused on cellular or subcellular biology. Acceptable courses include
 - BB 2550 BB 3920
 - BB 2920 BB 4010
 - BB 3080 BB 4065
 - BB 3620 BB 4550
3. At least 3/3 unit of biochemistry selected from
 - CH 4110 CH 4150
 - CH 4120 CH 4170
 - CH 4130
4. Capstone to be selected from
 - CH 4150 CH 4170
 - CH 4160 CH 4190

Majors in chemistry may not receive a biochemistry minor.

MINOR IN CHEMISTRY

The Minor in Chemistry is flexible and allows a student to design a minor with the balance between depth and breadth that is appropriate for the student's specific educational and professional objectives. Of the two units of required study, one unit must be at an advanced level (3000/4000), including a 4000 level capstone course. WPI policy for double counting courses to satisfy the requirements for a minor can be found in the Undergraduate Catalog.

REQUIREMENTS (Note 1)	UNITS
1000 level CH course	1/3
2000 level CH courses (Note 2)	2/3
3000/4000 level CH courses	2/3
4000 level CH courses (capstone)	1/3

NOTES

1. A higher level CH course can be used to satisfy the requirement for a lower level course e.g. 2000 for 1000, 3000 /4000 for 2000 etc.
2. Selected from CH2310, CH2320, and CH2330.

Two examples of sequences that satisfy the requirements for a CH minor:

CH Minor with Breadth	CH Minor with Depth in Physical Chemistry
CH 1020 Forces and Bonding	CH 1020 Forces and Bonding
CH 2310 Organic Chemistry I	CH 3510 Chemical Thermodynamics
CH 2320 Organic Chemistry II	CH 3530 Quantum Chemistry
CH 3510 Chemical Thermodynamics	CH 3550 Chemical Dynamics
CH 3410 Principles of Inorganic Chemistry	CH 3410 Principles of Inorganic Chemistry
CH 4110 Biochemistry I	CH 4520 Chemical Statistical Mechanics

Many other sequences are possible.

CIVIL AND ENVIRONMENTAL ENGINEERING

T. EL-KORCHI, HEAD

PROFESSORS: T. El-Korchi, F. L. Hart, R. Mallick
 ASSOCIATE PROFESSORS: L. D. Albano, J. Bergendahl, P. P. Mathisen, R. Pietroforte, J. D. Plummer, G. F. Salazar
 ASSISTANT PROFESSORS: Y. Kim, N. Rahbar, A. Sakulich, M. Tao
 INSTRUCTORS: S. LePage, L. Cewe-Malloy
 TEACHING PROFESSOR: J. Hall
 ASSISTANT TEACHING PROFESSOR: U. Berardi
 EMERITUS PROFESSORS: F. DeFalco, R. Fitzgerald, J. C. O'Shaughnessy

MISSION STATEMENT

The Civil Engineering program at WPI prepares graduates for careers in civil engineering, emphasizing professional practice, civic contributions, and leadership, sustained by active life-long learning. The curriculum combines a project based learning

environment with a broad background in the fundamental principles of civil engineering. Students have the flexibility to explore various civil engineering disciplines and career opportunities.

PROGRAM EDUCATIONAL OBJECTIVES

Graduates a few years out of the Civil and Environmental Engineering Undergraduate Program should:

1. be global citizens and stewards for the planet with an appreciation for the interrelationships between basic knowledge, technology, and society, while solving the challenges facing civil engineers in the 21st century.
2. be able to apply the fundamental principles of mathematics, science and engineering to analyze and solve problems and to produce creative sustainable design.
3. have the ability to engage in life-long learning, enhance their technical skills through graduate studies and continuing education, and through relevant experience.
4. exhibit leadership in the civil engineering profession, be engaged in professional societies, demonstrate understanding of ethical responsibility, and have a professional demeanor necessary for a successful civil engineering career.

PROGRAM OUTCOMES

1. Preparation for engineering practice, including the technical, professional, and ethical components.
2. Preparation for the future changes in civil engineering.
3. A solid understanding of the basic principles of civil engineering.
4. An understanding of appropriate scientific concepts, and an ability to apply them to civil engineering.
5. An understanding of the engineering design process and an ability to perform engineering design, which includes the multidisciplinary aspects of the engineering design process, the need for collaboration and communications skills, plus the importance of cost and time management.
6. Demonstration of an ability to set up experiments, gather and analyze data, and apply the data to practical engineering problems.
7. Demonstration of in-depth understanding of at least one subarea within civil engineering.
8. Understanding of options for careers and further education, and the educational preparation necessary to pursue those options.
9. An ability to learn independently.
10. The broad education envisioned by the WPI Plan, and described by the Goal and Mission of WPI.
11. An understanding of civil engineering profession in a societal and global context.

Program Distribution Requirements for the Civil Engineering Major

The normal period of undergraduate residency at WPI is 16 terms. In addition to the WPI requirements applicable to all students (see page 7), students wishing to receive the ABET accredited degree designated “Civil Engineering” must satisfy certain distribution units of study in the areas of mathematics, basic science, and engineering science and design as follows:

REQUIREMENTS	MINIMUM UNITS
1. Mathematics and Basic Science (Notes 1,2).	4
2. Engineering Science and Design (including the MQP) (Note 3,4,5,6).	6

NOTES:

1. Mathematics must include differential and integral calculus, differential equations, and probability and statistics.

2. Must include at least one course in physics, two courses in chemistry, and one course in an additional science area.
3. A minimum of 4 units of work must be within the Civil Engineering area. All CE courses including the MQP, ES 2503, ES 2800, and ES 3004 are acceptable within the Civil Engineering area.
4. The curriculum must include at least one engineering science course outside the major discipline area. Courses acceptable to satisfy the requirement of outside-of-discipline course are those taught in other engineering departments. The course must be 2000-level or above and cannot include ES 2501, ES 2502, ES 2503, ES 2800, and ES 3004.
5. All students are required to include an appropriate laboratory experience as part of their overall program. This experience can be met by the completion of two undergraduate CE lab courses, selected from among the following: CE 2020, CE 3024, CE 3026, CE 4054, and CE 4060. Alternately, an appropriate laboratory experience could also be accomplished by a student through careful planning of course, project and laboratory work and approval by petition through the Department Program Review Committee.
6. Must include 1/3 unit of Capstone Design Experience.

CIVIL ENGINEERING PROGRAM CHART

This chart summarizes course and scheduling recommendations.

First Year/ Sophomore	MATHEMATICS AND SCIENCE (4 units minimum required)							
	Math	MA 1020 or MA 1021, MA 1022, MA 1023, MA 2051, MA 2611						
	Science	CH 1010, CH 1020, PH 1110, GE 2341, BB 1001						
	Other Math and Science	MA 1024, MA 2071, MA 2210, PH 1120, BB 1002						
	HUMANITIES AND ARTS (2 units minimum required)							
	SOCIAL SCIENCE (2/3 units minimum required)							
Junior	IQP (1 unit minimum required)							
Anytime	PHYSICAL EDUCATION (1/3 unit minimum required)							

ENGINEERING SCIENCE AND DESIGN (6 units minimum required; 4 units minimum required in Civil Engineering)								
First Year/ Sophomore	Engineering Science	CE 1030, CE 2000, CE 2001, CE 2002, CE 2020, ES 2503, ES 2800, ES 3004						
Junior/ Senior	Computer Applications	CE 3030, CE 3031						
	Outside of CE	ES 2001, ES 3001, ECE 2010 or other 2000-level or above engineering course						
	Civil Engineering	Subareas	Structural	Geotechnical	Environmental and Hydraulics	Urban and Environmental Planning	Transportation	Construction Engineering and Project Management
		Courses	CE 3010 CE 3006 CE 3008 CE 4007 CE 4017	CE 3041 CE 3044	CE 3059 CE 3060 CE 3061 CE 3062 CE 4061 CE/CHE 4063 CE 4600	CE 3070 CE 3074 CE 4071	CE 3050 CE 3051	CE 3020 CE 3022 CE 3025
		Labs	CE 3026		CE 4060		CE 4054	CE 3024
MQP		Project in areas of interest, including capstone design						
Anytime	ELECTIVES (1 unit)							

PROGRAM DEVELOPMENT AND COURSE SELECTION

Students must meet distribution requirements for the Civil Engineering major; however, no unique courses are specifically required. Students should consult with their academic advisor to develop a program of study that meets WPI and ABET requirements. In addition, students should achieve breadth across the civil engineering discipline by taking courses in at least four subareas, depth within subareas of interest, and an understanding of the civil engineering profession. Lastly, a concentration in the environmental subarea is available. The program chart on page 62 can aid students in developing their plan of study.

Subareas of Civil Engineering

Civil and environmental engineers plan, design, build and maintain the facilities that are paramount to modern society - facilities that provide for a high quality of life. These include buildings, transportation systems, waterways, and water and wastewater treatment systems, to name a few. Today, these facilities are designed using modern information systems and the principles of sustainability. Several subareas of civil and environmental engineering are available for study. Students are encouraged to take courses in multiple areas and develop an understanding for the interrelationships between these subareas that are involved in most civil engineering problems.

STRUCTURAL AND GEOTECHNICAL ENGINEERING

(L. Albano, T. El-Korchi, R. Mallick, N. Rahbar, A. Sakulich, M. Tao)

The practice of structural engineering involves the analysis and design of buildings, bridges and other components of our infrastructure. An understanding of mechanics and the engineering properties of construction materials serves as a foundation for study in this area. Geotechnical engineering focuses on the engineering behavior of earth materials. The design, analysis and construction of subsurface facilities includes a broad array of applications - including building foundations, pavement subgrades, tunnels, dams, landfills, and groundwater development.

ENVIRONMENTAL ENGINEERING

(J. Bergendahl, F. Hart, P. Mathisen, J. O'Shaughnessy, J. Plummer)

Environmental engineering involves protection of natural ecosystems as well as protection of public health. The practicing environmental engineer is concerned with planning, design, construction, operation and regulation of water quality control systems related to water supply and treatment, wastewater collection and treatment, and water resources protection. The environmental engineer is also concerned with hazardous waste remediation, pollutant migration and modeling, solid waste management, public health, radiological health, and air pollution control.

TRANSPORTATION ENGINEERING

(T. El-Korchi, R. Mallick, M. Tao)

Transportation engineers focus on the safe and efficient movement of people and goods. In particular, transportation engineers plan, design, construct, and operate highways and other

facilities, such as transit systems, railways, and airports. The transportation infrastructure in the U.S. plays an important role in commerce, and the development of systems to carry large volumes of traffic safely and securely is important. Thus, the transportation engineer is concerned with roadway development, pavement engineering, drainage systems, traffic engineering, roadside safety, and travel demand modeling.

URBAN AND ENVIRONMENTAL PLANNING

(P. Mathisen, J. Plummer)

The Urban and Environmental Planning area involves evaluating relationships between community development and both the natural and built environment. Planners seek to improve the quality of life in communities, with particular emphasis on environmentally conscious and sustainable solutions. Through the analysis and presentation of relevant data, planners inform and guide the public decision-making process while balancing economic, political, environmental, and social concerns. By exploring methods in community master planning, environmental impact analysis, growth management, and land use regulation, students can develop a comprehensive understanding of the framework within which civil engineers address urban and environmental planning problems.

CONSTRUCTION ENGINEERING AND PROJECT MANAGEMENT

(L. Albano, R. Pietroforte, G. Salazar)

The construction engineering and project management subarea is directed to students whose interests lie in the design and construction engineering process but who are also concerned with engineering economics, social science, management, business, labor and legal relations, and the interaction of governmental and private interests as they relate to major construction projects. Engineers in this subarea plan, estimate, schedule and manage the construction of engineered facilities using modern tools - including information technologies and control systems.

ENVIRONMENTAL CONCENTRATION

Civil Engineering majors may choose to focus their studies by obtaining an Environmental concentration. An Environmental concentration in the CEE Department focuses on the planning, design, construction, operation and regulation of water quality control systems related to water supply and waste treatment. Additional areas of focus include hydrology, hydraulics, water resources, solid and hazardous waste management, waste minimization, public health and air pollution control.

Students electing to pursue the Environmental concentration follow a general curriculum in Civil Engineering, with emphasis on the environmental engineering subarea. Such preparation leads to an ABET accredited degree, and is an excellent start for entry-level professional placement or graduate study in environmental engineering.

The Environmental concentration is earned by completing six courses from the following list (or alternate courses through petition) plus an MQP in the environmental area. Typical MQPs include the analysis and design of innovative water and wastewater treatment systems, water quality monitoring and pollutant control, water resources analysis and groundwater studies.

CE 3059	Environmental Engineering
CE 3060	Water Treatment
CE 3061	Wastewater Treatment
CE 3062	Hydraulics
CE 3070	Urban and Environmental Planning
CE 3074	Environmental Analysis
CE 4060	Environmental Engineering Laboratory
CE 4061	Hydrology
CE/CHE 4063	Transport and Transformations in the Environment
CE 4071	Land Use Development & Controls
CE 4600	Hazardous and Industrial Waste Management
CHE 3201	Kinetics and Reactor Design
CHE 3920	Air Quality Management

PROJECTS

A great variety of projects are available to civil and environmental engineering students. Students may select project topics which are related to their subarea of emphasis, or may develop interdisciplinary projects that incorporate multiple subareas. Projects exemplify the type of work students will encounter in their post-graduate pursuits. Project activities can include a combination of design, construction planning, sponsored research, laboratory investigations, field work, and internship activities with governmental agencies and private industry. Students should plan their Major Qualifying Project activity during the junior year, in consultation with a faculty advisor. The MQP should include analysis of a comprehensive civil engineering problem, consideration of alternative solutions, and optimization of a solution. A major objective of the MQP is the development of sound engineering judgment, incorporating engineering economics and social factors into problem solving.

Each civil engineering student must complete a capstone design experience which draws on past course work, involves significant engineering design, and relates to the practice of civil engineering. Normally, this is accomplished as part of the MQP. At the time of registration for the MQP, the project advisor indicates whether the project meets the capstone requirement. If not, the advisor will provide an additional 1/3 unit of capstone design (not MQP) work to meet the requirement. Alternatively, another MQP which meets the requirement could be selected.

FUNDAMENTALS OF ENGINEERING EXAM

The first step to becoming a licensed professional engineer is passing the Fundamentals of Engineering (FE) exam. Licensure is used to ensure public safety by requiring practicing consultants to demonstrate their qualifications based on education, experience, and examinations, including the FE exam. Engineers who attain licensure enjoy career benefits that allow them to offer consulting services and rise to positions of responsibility. All Civil Engineering majors are strongly encouraged to take the FE exam during their senior year. The exam is offered in October and April each year.

COMBINED BACHELOR/MASTER'S PROGRAM

Continued studies beyond the bachelor's degree are valuable for career advancement and professional engineering licensure. Combined Bachelor/Master's degree programs offer the advantage of double-counting up to 12 credits, including up to six credits of advanced coursework (4000-level) at the undergraduate level, for both the Bachelor's and Master's degree requirements. Specific CEE requirements and more information can be obtained at the Civil and Environmental Engineering Department office. Programs leading to the Master of Science and Master of Engineering are available. Students should consult with their academic advisor to discuss program options, admission requirements, and course planning.

COMPUTER SCIENCE

C. E. WILLS, HEAD

D. FINKEL, ASSOCIATE HEAD

PROFESSORS: D. C. Brown, M. L. Claypool, D. J. Dougherty, D. Finkel, M.A. Gennert, J. Guttman, M. Hofri, R. E. Kinicki, C. Rich, E. A. Rundensteiner, M. O. Ward, C. E. Wills

ASSOCIATE PROFESSORS: E. Agu, K. Fisler, N. Heffernan, G. T. Heineman, R. W. Lindeman, C. Ruiz

ASSISTANT PROFESSORS: J. E. Beck, D. Berenson, S. H. Chernova, M. Y. Eltabakh, C. A. Shue, E. Torres-Jara, K. K. Venkatasubramanian

RESEARCH PROFESSOR: C. L. Sidner

PROFESSORS OF PRACTICE: M. J. Ciaraldi, G. F. Pollice

VISITING ASSOCIATE PROFESSOR: G. N. Sarkozy

ADJUNCT TEACHING PROFESSOR: H. C. Lauer

INSTRUCTOR: G. Hamel

PROFESSORS EMERITUS: K. A. Lemone, S. M. Selkow

MISSION STATEMENT

The mission of the Computer Science Department at WPI is to provide outstanding education to its undergraduate and graduate students in accordance with the principles of the WPI mission, to advance scholarship in key domains of the computing sciences, and to engage in activities that improve the welfare of society and enhance the reputation of WPI. The Department aims to maintain an environment that promotes innovative thinking; values mutual respect and diversity; encourages and supports scholarship; instills ethical behavior; and engenders life-long learning.

PROGRAM EDUCATIONAL OBJECTIVES

In support of its goals and mission, the WPI Computer Science undergraduate program's educational objectives are to graduate students who will:

- achieve professional success due to their mastery of Computer Science theory and practice;
- become leaders in business, academia, and society due to a broad preparation in mathematics, science & engineering, communication, teamwork, and social issues;
- pursue lifelong learning and continuing professional development;
- use their understanding of the impact of technology on society for the benefit of humankind.

PROGRAM OUTCOMES

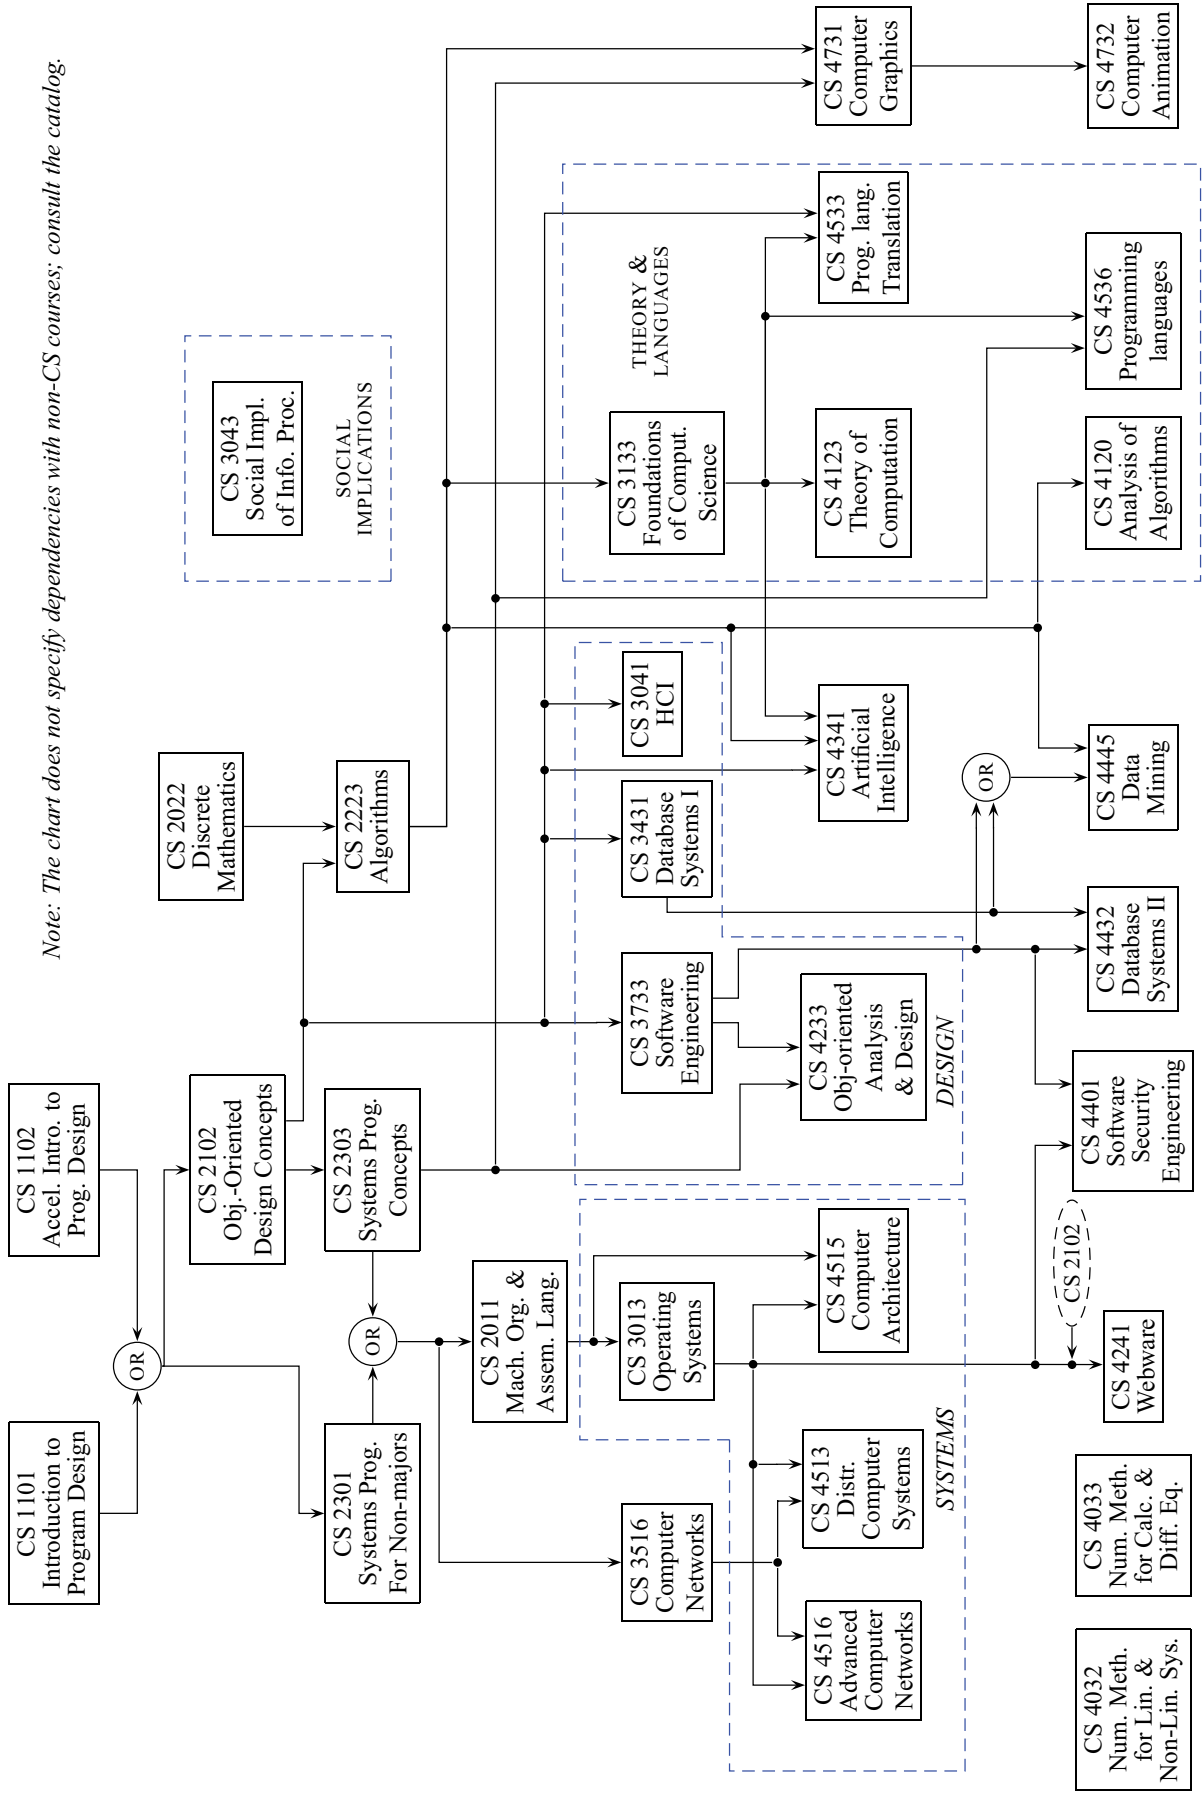

Based on the educational objectives, the specific educational outcomes for the WPI Computer Science undergraduate program are that by the time of graduation CS majors will have achieved:

1. an understanding of programming language concepts;
2. knowledge of computer organization;
3. an ability to analyze computational systems;
4. knowledge of computer operating systems;
5. an understanding of the foundations of computer science;
6. an understanding of software engineering principles and the ability to apply them to software design;
7. an understanding of human-computer interaction;
8. completion of a large software project;
9. knowledge of advanced computer science topics;
10. an understanding of mathematics appropriate for computer science;
11. knowledge of probability and statistics;
12. an understanding of scientific principles;
13. an ability to design experiments and interpret experimental data;
14. an ability to undertake independent learning;
15. an ability to locate and use technical information from multiple sources;
16. an understanding of professional ethics;
17. an understanding of the links between technology and society;
18. an ability to participate effectively in a class or project team;
19. an ability to communicate effectively in speech;
20. an ability to communicate effectively in writing.

COMPUTER SCIENCE COURSE FLOW CHART

Note: The chart does not specify dependencies with non-CS courses; consult the catalog.

Program Distribution Requirements for the Computer Science Major

The normal period of residency at WPI is 16 terms. In addition to the WPI requirements applicable to all students (see page 7) mathematics, basic science, and related fields as follows

COMPUTER SCIENCE	MINIMUM UNITS
1. Computer Science (including the MQP) (Notes 1, 2).	6
2. Mathematics (Notes 2, 3, 5).	7/3
3. Basic Science and/or Engineering Science (Notes 2, 4).	5/3

NOTES:

1. a. Only CS 1101, CS 1102 and computer science courses at the 2000-level or higher will count towards the computer science requirement. CS 2118 will not count towards the computer science requirement.
 - b. Must include at least 1/3 unit from each of the following areas: Systems (CS 3013, CS 4513, CS 4515, CS 4516), Theory and Languages (CS 3133, CS 4120, CS 4123, CS 4533, CS 4536), Design (CS 3041, CS 3431, CS 3733, CS 4233), and Social Implications of Computing (CS 3043, STS 2208, GOV/ID 2314). (If STS 2208 or GOV/ID 2314 is used to satisfy this requirement, it does not count as part of the 6 units of CS.)
 - c. At least 5/3 units of the Computer Science requirement must consist of 4000-level courses. These units can also be met by WPI graduate CS courses.
 - d. Only one of CS 1101 and CS 1102 may count towards the computer science requirement. Only one of CS 2301 and CS 2303 may count towards the computer science requirement.
2. A cross-listed course may be counted toward only one of areas 1, 2, 3, above.
3. Must include at least 1/3 unit from each of the following areas: Probability (MA 2621, MA 2631) and Statistics (MA 2611, MA 2612).
4. Courses satisfying the science requirement must come from the BB, BME, CE, CH, CHE, ECE, ES, GE, ME, PH, RBE disciplines. At least three courses must come from BB, CH, GE, PH, where at least two courses are from one of these disciplines.
5. At most four 1000-level Mathematics courses may be counted towards this requirement.

The Computer Science Department offers a second program, Computers with Applications, which is not accredited by the Computing Accreditation Commission of ABET. The distribution requirements for that program are:

Program Distribution Requirements for the Computers with Applications Major

COMPUTERS WITH APPLICATIONS	MINIMUM UNITS
1. Computer Science (including the MQP) (Notes 1, 2).	16/3
2. Mathematics (Note 2).	7/3
3. Basic Science (Notes 2, 3).	2/3
4. Application Area (Notes 2, 4).	5/3

NOTES:

1. a. Only CS 1101, CS 1102 and computer science courses at the 2000-level or higher will count towards the computer science requirement. CS 2118 will not count towards the computer science requirement.
 - b. Must include at least 1/3 unit from each of the following areas: Systems (CS 3013, CS 4513, CS 4515, CS 4516), Theory and Languages (CS 3133, CS 4120, CS 4123, CS 4533, CS 4536), Design (CS 3041, CS 3431, CS 3733, CS 4233), and Social Implications of Computing (CS 3043, STS 2208, GOV/ID 2314). (If STS 2208 or GOV/ID 2314 is used to satisfy this requirement, it does not count as part of the 16/3 units of CS.)
 - c. At least 5/3 units of the Computer Science requirement must consist of 4000-level courses. These units can also be met by WPI graduate CS courses.
 - d. The MQP must involve the application of computer science concepts to the Application Area specified in Requirement 4.

e. Only one of CS 1101 and CS 1102 may count towards the computer science requirement. Only one of CS 2301 and CS 2303 may count towards the computer science requirement.

2. A cross-listed course may be counted toward only one of areas 1, 2, 3, 4 above.
3. The two courses satisfying the science requirement must both come from one of the following disciplines: BB, CH, GE, PH.
4. This requirement is satisfied by a cohesive set of work from disciplines other than Computer Science. Work used for any other degree requirements cannot be used for the Application Area. At least 3/3 units must be course work at the 3000-level or higher. Independent Study/Project (ISP) work, if any, must be conducted under the supervision of a member of the faculty in that discipline.

ADDITIONAL ADVICE

For additional advice about course selections, students should consult with their academic advisor or the Computer Science Department Web site (<http://www.cs.wpi.edu/Undergraduate/>)

INDEPENDENT STUDY

Independent study and project work provide the opportunity for students, working under the direction of faculty members, to study or conduct research in an area not covered in courses, or in which the students require a greater depth of knowledge. The background required of a student for independent study work depends on the particular area of study or research.

PROJECT OPPORTUNITIES

Off-campus major qualifying projects are available at the Budapest Project Center, the Lincoln Laboratory Project Center, the Silicon Valley Project Center, and the Wall Street Project Center.

Projects are also available on campus, both to support the ongoing research activities of the faculty, and to expand and improve the applications of computers for service, education, and administration.

Additionally, the department supports IQPs in a number of areas.

COMPUTER SCIENCE MINOR

The Minor in Computer Science will consist of 2 units from Computer Science, with no more than one course at the 1000-level. The 2 units must include one of the following, each of which provides an integrating capstone experience.

- Any CS 3000-level course, except for CS 3043
- Any CS 4000-level course, except for CS 4032 and CS 4033
- Any graduate-level computer science course, except for CS 505
- 1/3 unit of another activity, for example an ISP, which is validated by the CS faculty instructor as a capstone

The Computer Science Department has an advisor for CS Minors. Students are required to consult with the CS Minor Advisor before declaring the CS Minor. Majors in Computer Science and Computers with Applications do not qualify for a Minor in Computer Science. Students should review the Operational Rules of the Minor at WPI to avoid problems with double counting CS courses.

Students should review the Operational Rules of the Minor at WPI to avoid problems with double counting CS courses. For general policy on the Minor, see the description on page 11.

ELECTRICAL AND COMPUTER ENGINEERING

Y. MASSOUD, HEAD; J. McNEILL, ASSOCIATE HEAD

PROFESSORS: D. Cyganski, A. E. Emanuel, F. J. Looft, R. Ludwig, S. Makarov, W. R. Michalson, J. A. Orr, K. Pahlavan, P. C. Pedersen

ASSOCIATE PROFESSORS: D. R. Brown, E. A. Clancy, R. J. Duckworth, H. Hakim, X. Huang, J. A. McNeill, B. Sunar, R. F. Vaz, A. Wyglinski

ASSISTANT PROFESSORS: T. Eisenbarth, A. Klein, L. Lai, T. Padir

INSTRUCTORS: S. J. Bitar, G. Bogdanov, S. M. Jarvis

EMERITUS PROFESSORS: K. A. Clements, J. S. Demetry, W. H. Eggimann, W. R. Grogan, O. W. Kennedy, G. H. Owyang

MISSION STATEMENT

To be prepared for employment as a contributing engineer and/or for graduate-level education, students within the ECE Department receive instruction that is balanced between theory and practice. In fact, much of our curriculum integrates theory and practice within each course. It is common to study new devices and techniques, and then immediately work with these devices/techniques in a laboratory setting. In response to the breadth of ECE, all students work with their academic advisor to develop a broad-based program of study. As with most engineering curricula, ECE study includes a solid foundation of mathematics and science. Discipline-specific study in ECE usually begins early in a student's career — during the second half of the freshman year — with courses providing a broad overview of the entire field. During the sophomore and junior years, students learn the core analysis, design and laboratory skills necessary to a broad range of ECE sub-disciplines. When desired, specialization within ECE occurs during the junior and senior years. In addition, all students complete a major qualifying project (MQP). This project, typically completed in teams during the senior year, is an individualized design or research project that draws from much of the prior instruction. Utilizing the benefit of individualized instruction from one or more faculty members, students develop, implement and document the solution to a real engineering problem. Many of these projects are sponsored by industry, or are associated with ongoing faculty research. These projects form a unique bridge to the engineering profession.

PROGRAM EDUCATIONAL OBJECTIVES

The department educates future leaders of the electrical and computer engineering profession, with a program characterized by curricular flexibility, student project work, and active involvement of students in their learning. Through a balanced, integrated curriculum we provide an education which is strong both in the fundamentals and in state-of-the-art knowledge, appropriate for immediate professional practice as well as graduate study and lifelong learning. Such an education also prepares students broadly for their professional and personal lives, providing the basis for effective leadership and informed

citizenship. The curriculum embraces WPI's philosophy of education, and takes advantage of key components such as the Interactive Qualifying Project to develop technical professionals who possess the ability to communicate, work in teams, and understand the broad implications of their work.

PROGRAM OUTCOMES

Based on the department's educational objectives, students will achieve the following specific educational outcomes within a challenging and supportive environment:

- (a) an ability to apply knowledge of mathematics, science, and engineering
- (b) an ability to design and conduct experiments, as well as to analyze and interpret data
- (c) an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- (d) an ability to function on multidisciplinary teams
- (e) an ability to identify, formulate, and solve engineering problems
- (f) an understanding of professional and ethical responsibility
- (g) an ability to communicate effectively
- (h) the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
- (i) a recognition of the need for, and an ability to engage in life-long learning
- (j) a knowledge of contemporary issues
- (k) an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Program Distribution Requirements for the Electrical and Computer Engineering Major

The normal period of residency at WPI is 16 terms. In addition to WPI requirements applicable to all students, students wishing to receive the major designated "Electrical and Computer Engineering" must satisfy certain distribution requirements. These requirements apply to 10 units of study in the areas of mathematics, basic science, and engineering science and design as follows:

REQUIREMENTS	MINIMUM UNITS
1. Mathematics and Basic Science (Notes 1a-1d)	4
2. Engineering Science and Design (ES/D) (including the MQP) (Notes 2a-2g)	6

NOTES:

1. Mathematics and Basic Science:
 - a. Must include at least 7/3 units of math (prefix MA). Mathematics must include differential and integral calculus, differential equations, and probability.
 - b. Must include at least 2/3 units of physics (prefix PH).
 - c. Must include at least 1/3 units of chemistry (prefix CH) or 1/3 units biology (prefix BB).
 - d. Must include an additional 2/3 units of math or basic science (prefixes MA, PH, CH, BB, or GE).

2. Engineering Science and Design (including the MQP):

- a. Must include at least 5 units at the 2000-level or higher within the Electrical and Computer Engineering area (including the MQP). All courses with prefix ECE at the 2000-level or higher and ES 3011 are applicable to these 5 units.
- b. The 5 units within the Electrical and Computer Engineering area must include at least 1 unit of courses from these approved Electrical Engineering courses: ECE 2112, ECE 2201, ECE 2305, ECE 2312, ECE 3113, ECE 3204, ECE 3308, ECE 3311, ECE 3501, ECE 3503, ECE 4011, ECE 4023, ECE 4305, ECE 4703, ECE 4902, ECE 4904, and ES 3011.
- c. The 5 units within the Electrical and Computer Engineering area must include at least 2/3 unit of courses from these approved Computer Engineering courses: ECE 2029, ECE 2049, ECE 3829, ECE 3849 and ECE 4801.
- d. The 5 units within the Electrical and Computer Engineering area must include 1/3 unit of Capstone Design Experience. (This requirement is typically fulfilled by the MQP).
- e. Must include at least 1/3 unit of computer science (prefix CS), at the 2000-level or above (other than CS 2011, CS 2022, CS 3043 which cannot be applied to this requirement).
- f. Must include at least 1/3 unit of engineering science (prefix ES) at the 2000-level or above. ES 3011 cannot be applied to this requirement.
- g. Must include an additional 1/3 unit of engineering science and design at the 2000-level or above, selected from courses having the prefix AREN, BME, CE, CHE, CS (other than CS 2011, CS 2022, CS 3043), ECE, ES, FP, ME, or RBE.

SUBDISCIPLINES WITHIN ECE

Given a solid foundation, the MQP will allow you to demonstrate an in-depth understanding of one or more of the subdisciplines that compose the field of electrical and computer engineering. As a guide to the areas of study that can be investigated in an MQP, the ECE Course Flowchart identifies seven subdisciplines as possible areas for in-depth study leading to an MQP. Note that students should not feel constrained by these area designations — this is only one of many possible ways to organize the diverse field of electrical and computer engineering. Many if not most MQPs will incorporate subject matter from several different subdisciplines. The purpose of this list is to guide students interested in a particular area to coursework within a subdiscipline (Area Courses), relevant courses to choose from outside the subdiscipline (Related Courses), and faculty whose research and MQP advising interests fall within the subdiscipline (Area Consultants).

Robotics

Area Consultants: Cyganski, Duckworth, Looft, Michalson, Padir

Area Courses

ECE 2029	Introduction to Digital Circuit Design
ECE 2049	Embedded Computing in Engineering Design
ECE 3849	Real-time Embedded Systems
ES 3011	Control Engineering I

Related Courses

CS 4341	Artificial Intelligence
ECE 2201	Microelectronics I
ECE 3503	Power Electronics
RBE 1001	Introduction to Robotics
RBE 2001	Unified Robotics I
RBE 2002	Unified Robotics II
RBE 3001	Unified Robotics III
RBE 3002	Unified Robotics IV

Power Systems Engineering

Area Consultants: Emanuel, Hakim, Orr

Area Courses

ECE 3501	Electrical Energy Conversion
ECE 3503	Power Electronics

Related Courses

ES 3001	Introduction to Thermodynamics
ES 3011	Control Engineering I
ME 1800	Manufacturing Science Prototyping and Computer-Controlled Machining
OIE 2850	Engineering Economics

RF Circuits and Microwaves

Area Consultants: Ludwig, Makarov

Area Courses

ECE 2112	Electromagnetic Fields
ECE 3113	RF Circuit Design

Related Courses

MA 4451	Boundary Value Problems
PH 3301	Electromagnetic Theory
PH 3401	Quantum Mechanics I
PH 3504	Optics

Communications and Signal Analysis

Area Consultants: Brown, Clancy, Cyganski, Hakim, Klein, Lai, Makarov, Pahlavan, Pedersen, Wyglinski

Area Courses

ECE 2305	Introduction to Communications and Networks
ECE 2312	Discrete-Time Signal and System Analysis
ECE 3308	Introduction to Wireless Networks
ECE 3311	Principles of Communication Systems
ECE 4305	Software-Defined Radio Systems and Analysis
ECE 4703	Real-Time Digital Signal Processing

Related Courses

ES 3011	Control Engineering I
MA 2071	Matrices and Linear Algebra I
MA 2621	Probability for Applications
MA 4291	Applicable Complex Variables

Biomedical Engineering

Area Consultants: Clancy, Pedersen

Area Courses

ECE/BME 4011	Biomedical Signal Analysis
ECE/BME 4023	Biomedical Instrumentation Design

Related Courses

BME 4201	Biomedical Imaging
ECE 2201	Microelectronic Circuits I
ECE 2312	Discrete-Time Signal and System Analysis
ECE 3204	Microelectronic Circuits II

Analog Microelectronics

Area Consultants: Bitar, McNeill

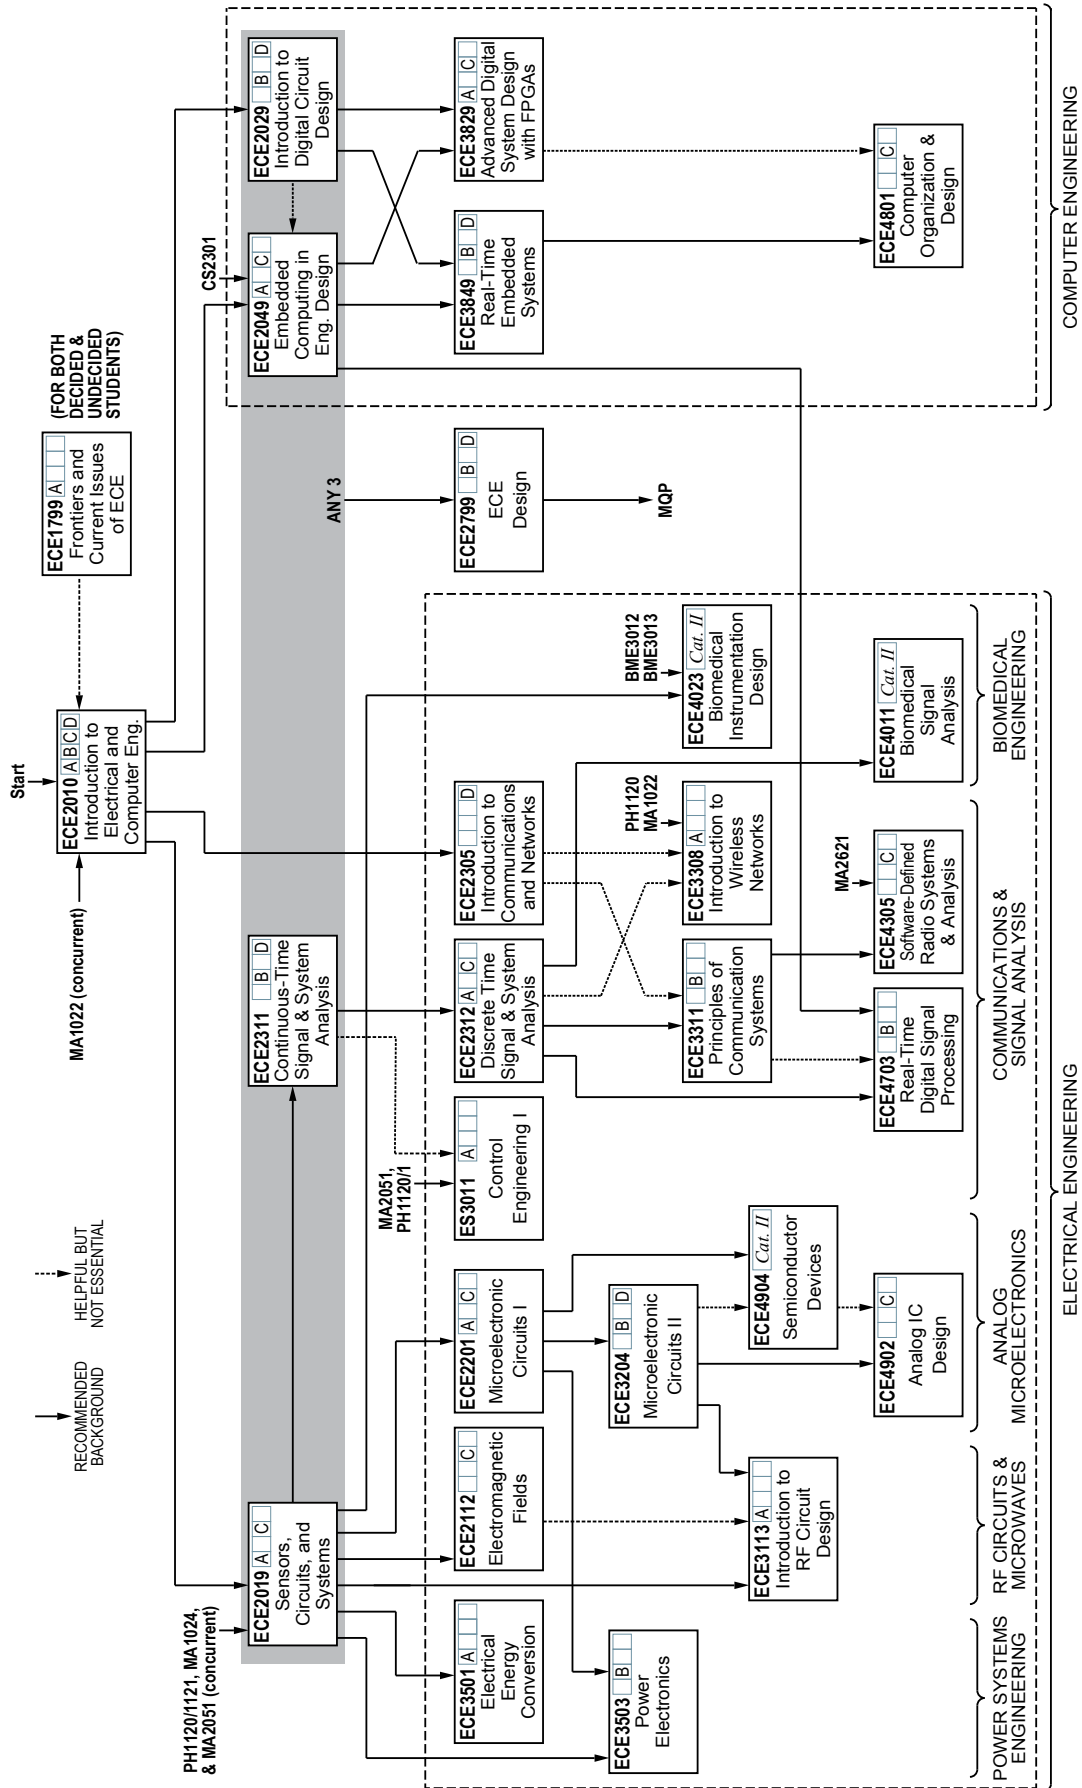

Area Courses

ECE 2201	Microelectronics I
ECE 3204	Microelectronics II
ECE 4902	Analog Integrated Circuit Design
ECE 4904	Semiconductor Devices

Related Course

ES 3011	Control Engineering I

Computer Engineering

Area Consultants: Clancy, Cyganski, Duckworth, Eisenbarth, Huang, Jarvis, Looft, Michalson, Sunar

Area Courses

ECE 2029	Introduction to Digital Circuit Design
ECE 2049	Embedded Computing in Engineering Design
ECE 3829	Advanced Digital System Design with FPGAs
ECE 3849	Real-time Embedded Systems
ECE 4801	Computer Organization and Design

Related Courses

ECE 2201	Microelectronics I
CS 2223	Algorithms
CS 3013	Operating Systems
CS 3733	Software Engineering
CS 4515	Computer Architecture
CS 4536	Programming Languages

OVERVIEW OF OTHER PROGRAM COMPONENTS

ENGINEERING SCIENCE AND DESIGN

Because modern engineering practice is increasingly interdisciplinary, all students achieve some breadth of study outside of the ECE department by taking a minimum of one Computer Science and one Engineering Science course. Both courses must be at the 2000-level or higher, and certain courses with limited technical content are not credited towards this requirement. (See the formal requirements listed previously in the distribution requirements.) Many students find it advantageous to take more than the minimum CS course requirement. CS 2301 is highly recommended for ECE students.

The Engineering Science courses represent cross-disciplinary areas that are applicable to many engineering and science departments.

MATHEMATICS AND SCIENCE

To succeed in the study of electrical and computer engineering, the necessary foundation far exceeds what can be taught in a few introductory courses. In fact, if you even want to begin to understand what your ECE professors are talking about in lecture, you must begin with a firm basis in mathematics and the natural sciences. Moreover, whether applied to ECE or not, proficiency in mathematics and the sciences is a necessary quality for any educated engineer. Consequently, the ECE major requires a total of 4 units (12 courses) as the “Mathematics and Basic Science” distribution requirement.

The first part of this requirement is sufficient education in mathematics. At least 7 of the 12 required courses must be in this area, including coursework in differential calculus, integral calculus, differential equations, and probability. To see which specific courses fulfill these math requirements, please consult the mathematics course descriptions, and your academic advisor.

The other part of the requirement is coursework in the sciences. A solid understanding of physics is essential to any ECE student, being ultimately necessary for describing the behavior of electricity and magnetism as well as other physical

phenomena. Knowledge of chemistry is useful as well, encompassing such topics as atomic and molecular behavior and the chemical properties of materials (such as silicon, which is quite useful in ECE). In recent years, knowledge of biology has also become important to electrical and computer engineers, particularly as biomedical-electrical technologies such as medical imaging continue to advance.

The ECE major requires at least 3 courses in the sciences, 2 of these courses must be in physics, and the remaining course may be in chemistry or biology depending on preference.

Finally, note that the total prescribed mathematics and science courses add up to 3 1/3 units (10 courses). To meet the distribution requirement, you then must take at least 2 more courses in any area of mathematics or science (that is, any other course with the prefix “MA”, “PH”, “CH”, “BB”, or “GE”).

MINOR IN ELECTRICAL AND COMPUTER ENGINEERING

For students who are not ECE majors and are interested in broadening their exposure to and understanding of electrical and computer engineering, the ECE department offers a Minor. This Minor provides an exciting opportunity to acquire a solid knowledge of electrical and computer engineering as needed in today’s diverse and technology driven society.

Successful candidates for the ECE Minor must meet the following requirements:

1. Complete two units of work from courses with the prefix “ECE” at the 2000-level or above.
2. Of the work in (1), at least 2/3 unit must be from ECE courses at the 3000-level or above which are thematically related.

The ECE minor form, available in the ECE office, lists examples of thematically related courses in different areas of concentration. Students seeking an ECE Minor should complete the ECE Minor form and submit it to the ECE office as early in the program of study as possible. The chair of the ECE curriculum committee will be responsible for review and approval of all ECE Minor requests.

WPI policy requires that no more than one unit of course work can be double counted toward other degree requirements.

ENGINEERING SCIENCE COURSES

In the formation of a program of study for any engineering or science student, it is important to emphasize a significant number of interdisciplinary courses which form the fundamental building blocks of so many scientific and engineering activities.

In addition to those courses in science and mathematics which are an important part of every engineer’s background at WPI, there are a number of courses containing subject matter common to a variety of disciplinary interests. These courses are known as the “engineering science group” and are often taught jointly by members of more than one department.

Every engineer, for example, needs to have some knowledge of graphics, the communications tool of engineering; of thermodynamics, the consideration of an important aspect of energy and its laws; of mechanics, solid and fluid, static and dynamic, the treatment of forces and their effects on producing motion. These and certain other courses of either basic knowledge or broad application are grouped in the engineering science series to provide special focus on them for all students interested in applied science or engineering. In developing programs to meet engineering science distribution requirements, students and advisors should give careful attention to these engineering science courses.

ENGINEERING PHYSICS

ADVISOR: G. S. Iannacchione

Example programs of study in Engineering Physics are listed under the Physics Department. These programs include any area of engineering and represent the application of physics. Specialization include areas under Aerospace, Mechanical, Electrical and Computer, Chemical, Civil, and Biomedical Engineering.

ENVIRONMENTAL ENGINEERING

DIRECTOR: J. PLUMMER (CEE)

ASSOCIATED FACULTY: J. Bergendahl (CEE), T. Camesano (CHE), W. Clark (CHE), D. DiBiasio (CHE), F. Hart (CEE), N. Kazantzis (CHE), P. Mathisen (CEE), B. Savilonis (ME), J. Sullivan (ME), R. Thompson (CHE)

MISSION STATEMENT

Environmental engineers are challenged not only with mastering technical and scientific principles, but also understanding the broader context within which environmental solutions are implemented. The environmental engineering program encourages coursework in the humanistic and social aspects of engineering decisions, public health management, and environmental preservation. The projects program at WPI offers environmental engineering students a unique opportunity to explore the complex humanistic, economic, legal, and political issues surrounding environmental engineering problems.

The Environmental Engineering degree program prepares students for careers in both the private and public sectors, consulting, industry, and advanced graduate study.

PROGRAM EDUCATIONAL OBJECTIVES

The educational objectives for the Bachelor degree in Environmental Engineering are that all graduates:

1. Are able to apply fundamental principles of mathematics, science, and engineering to solve water, air, and land environmental problems.
2. Have the interpersonal and communication skills, an understanding of ethical responsibility, and a professional attitude necessary for a successful engineering career.
3. Have the ability to engage in lifelong learning.
4. Have an appreciation for the interrelationships between basic scientific knowledge, technology, and societal issues.

PROGRAM OUTCOMES

The educational outcomes for the Bachelor degree in Environmental Engineering are that all graduates will:

1. Be prepared for engineering practice, including technical, professional, and ethical components.
2. Be prepared for future changes in environmental engineering.
3. Have a solid understanding of the basic principles of environmental engineering.
4. Demonstrate knowledge in the areas of water, land, and air systems, and environmental health.
5. Understand appropriate scientific concepts, and have an ability to apply them to environmental engineering.
6. Understand the engineering design process and have an ability to perform engineering design, which includes the multidisciplinary aspects of the engineering design process, the need for collaboration and communication skills, plus the importance of cost and time management.
7. Have the ability to collect, analyze and interpret experimental data.
8. Understand options for careers and further education, and the educational preparation necessary to pursue those options.
9. Have an ability to learn independently.
10. Have the broad education envisioned by the WPI Plan, and described by the Goal and Mission of WPI.
11. Have an understanding of the environmental engineering profession in a societal and global context.

Program Distribution Requirements for the Environmental Engineering Major

The normal period of residency at WPI is 16 terms. In addition to WPI requirements applicable to all students, students wishing to receive the ABET accredited degree designated "Environmental Engineering" must satisfy certain distribution requirements as follows:

REQUIREMENTS	MINIMUM UNITS
1. Mathematics and Basic Science (Note 1)	4
2. Advanced Science (Note 2)	1
3. Engineering Science and Design (Includes MQP) (Note 3)	6

NOTES:

1. Mathematics and Basic Science
 - a. Must include 6/3 units of mathematics, including differential and integral calculus, differential equations, and statistics.
 - b. Must include 6/3 units of basic science, including 1/3 unit of biology (BB), 3/3 units of chemistry (CH), 1/3 unit of earth science (GE 2341 recommended) and 1/3 unit of PH (calculus based).
2. Advanced Science: Must include 3/3 units of science in biology (BB) and chemistry (CH) with a minimum of 1/3 unit in BB and 1/3 unit in CH. Advanced BB courses must be at the 2000-level or higher. Advanced CH courses include CH 1040 and CH courses at the 2000-level or higher. Courses may not be double-counted toward the basic science requirement.
3. Engineering Science and Design
 - a. Must include 2/3 units in thermo fluids, including 1/3 unit in fluid mechanics (ES 3004 recommended) and 1/3 unit in thermodynamics (ES 3001, CHE 2013, or CH 3510).

ENVIRONMENTAL ENGINEERING PROGRAM CHART

STUDENTS EARNING AN ABET ACCREDITED BACHELOR DEGREE IN ENVIRONMENTAL ENGINEERING MUST COMPLETE A MINIMUM OF 15 UNITS OF STUDY, DISTRIBUTED AS FOLLOWS:

MATHEMATICS AND BASIC SCIENCE (4 Units Required)

Differential and integral calculus; differential equations	5/3 units
Statistics (MA 2611 recommended)	1/3 unit
Biology (BB)	1/3 unit
Chemistry (CH)	3/3 units
Earth science (GE 2341 recommended)	1/3 unit
Physics (PH)	1/3 unit

ADVANCED SCIENCE (1 Unit Required)

Must include 3/3 units of science in biology (BB) and chemistry (CH) with a minimum of 1/3 unit in BB and 1/3 unit in CH. Advanced BB courses must be at the 2000-level or higher. Advanced CH courses include CH 1040 and CH courses at the 2000-level or higher. Courses may not be double-counted toward the basic science requirement.

ENGINEERING SCIENCE AND DESIGN (6 Units Required;

5 1/3 units as arranged below plus 2/3 units free electives in ES&D at the 2000-level or above).

Please consult the program distribution requirements for detailed information on course requirements and selection.

Engineering Science

Thermofluids	minimum 2/3 units
ES 3001 Introduction to Thermodynamics (or CHE 2013 or CH 3510)	
ES 3002 Mass Transfer	
ES 3004 Fluid Mechanics	
CHE 3501 Applied Mathematics in Chemical Engineering	

Mechanics and Materials	minimum 2/3 units
CE 2000 Analytical Mechanics I (or ES 2501)	
CE 2001 Analytical Mechanics II (or ES 2502)	
ES 2001 Introduction to Material Science	
ES 2503 Introduction to Dynamic Systems	

Core Environmental Engineering **minimum 3/3 units**

CHE 2011 Chemical Engineering Fundamentals	
CE 3059 Environmental Engineering	
CE 3062 Hydraulics in Civil Engineering	
CHE 3201 Kinetics and Reactor Design	

Environmental Engineering Electives

Water Quality and Resources	minimum 3/3 units
CE 3060 Water Treatment	
CE 3061 Wastewater Treatment	
CE 4060 Environmental Engineering Laboratory	
CE 4061 Hydrology	

Air and Land Environmental Systems	minimum 2/3 units
CE 3041 Soil Mechanics	
CE 3074 Environmental Analysis	
CE 4600 Hazardous and Industrial Waste Management	
CE/CHE 4063 Transport and Transformations in the Environment	
CHE 3920 Air Quality Management	
CHE 4401 Unit Operations of Chemical Engineering I	

Environmental Management	minimum 1/3 unit
CE 3020 Project Management	
CE 3070 Urban and Environmental Planning	
CE 4071 Land Use Development and Controls	

Major Qualifying Project **3/3 units**

ADDITIONAL DEGREE REQUIREMENTS (4 units Required)

Humanities and Arts	6/3 units
Social Science‡	2/3 units
IQP	3/3 units
Physical Education	1/3 unit

‡ Many SS courses compliment topics in environmental engineering.
Courses in policy, regulations, law and environmental problems are recommended.

- b. Must include 2/3 units in mechanics and materials (CE 2000 or ES 2501, CE 2001 or ES 2502, ES 2001, ES 2503).
- c. Must include 3/3 units of Core Environmental Engineering (CHE 2011, CE 3059, CE 3062, CHE 3201).
- d. Must include 6/3 units in Environmental Engineering Electives, arranged as follows: 3/3 units in water quality and resources, 2/3 units in air and land environmental systems, and 1/3 unit in environmental management.
- e. Must include 1/3 unit of environmental health issues (CE 3059, CE 3060, CE 3061, or appropriate experience through IQP, independent study, or appropriate consortium courses).
- f. Must include 2/3 units with laboratory experimentation. Must include either CE 4060 or CHE 4401. The remaining 1/3 unit may be CE 4060, CHE 4401, laboratory courses in CH (CH 2640 or CH 2650, which would satisfy Advanced Science course requirements), CE 3026, or CE 2020.
- g. Must include 1/3 unit major design experience through the MQP, or other approved design experience in a course such as CHE 4403 or ME 4429.

For more information, please consult the web site for this major at <http://wpi.edu/academics/eve>.

ENVIRONMENTAL AND SUSTAINABILITY STUDIES (BACHELOR OF ARTS DEGREE)

DIRECTOR: R. KRUEGER

ASSOCIATED FACULTY: C. Clark, HUA; D. DiBiasio, CHE; J. Doyle, SSPS; L. Elgert, SSPS; R. Gottlieb, HUA; S. Jiusto, IGSD; F. Looft, ECE; J. MacDonald, CBC; L. Mathews, BB; C. Peet, IGSD; J.D. Plummer, CEE; R. Rao, BB; K. Rissmiller, SSPS/IGSD; T. Robertson, HUA; K. Saeed, SSPS; J. Sanbonmatsu, HUA; I. Shockey, IGSD; S. Tuler, IGSD

MISSION STATEMENT

With a growing public demand for governments and the private sector to focus greater attention on the implications of human production and consumption for environmental sustainability, professionals educated in aspects of human-environment interactions will be in increasing demand. Through core courses, projects, and seminars focused on integrated approaches to environmental issues, the environmental studies curriculum helps students to address contemporary environmental problems in creative ways that transcend disciplinary boundaries. This interdisciplinary approach also enables students to gain breadth and depth of knowledge in core disciplines such as biology, chemistry, philosophy, history and environmental law and policy.

Graduates will have strong, marketable skills translatable into graduate school, law school, or a professional environmental position upon graduation.

EDUCATIONAL OUTCOMES

Graduating Students will:

1. Be able to identify, analyze, and develop solutions to environmental problems creatively through sustained, multi-faceted investigation.
2. Have mastered fundamental concepts and methods of inquiry in their areas of specialization, whether environmental thought, policy, or methodology.

3. Be able to make connections between environmental disciplines and integrate information from multiple sources.
4. Be aware of how their decision-making processes affect and are affected by other individuals separated across time and space.
5. Be aware of personal, societal, and professional ethical standards.
6. Have interpersonal and communication skills and a professional attitude necessary for a successful career.
7. Understand and employ current technological tools.
8. Have the ability to engage in life-long learning.

Distribution Requirements

REQUIREMENTS	MINIMUM UNITS
1. Environmental Studies Core (Note 1)	1
2. Mathematics & Basic Science (Note 2)	2 2/3
3. Environmental Science and Engineering (Note 3)	3
4. Basic Social Science and Humanities (Note 4)	1
5. Environmental Social Science and Humanities (Note 5)	2
6. MQP	1
Total	10 2/3

NOTES

1. Only courses with the prefix ENV count toward this requirement. Must include the senior seminar in environmental studies.
2. Must include 2/3 unit of calculus, 1/3 unit of statistics, 2/3 unit of chemistry, and 2/3 unit of biology. May include 1/3 unit of basic engineering with the permission of the Environmental Studies Program Review Committee.
3. All courses with prefixes BB, CE, CH, CHE, ES, GE, and PH may qualify under this requirement. BB courses must be at the 2000 level or higher. Must include 1/3 unit of ecology. Must include 1/3 unit of engineering at the 2000 level or higher. The 3 units of environmental science and engineering courses must be coherently defined and approved by the Environmental Studies Program Review Committee.
4. Must include 1/3 unit of economics, 1/3 unit of public policy or political science, and 1/3 unit of either history or philosophy.
5. Must include 1/3 unit environmental economics, 1/3 unit environmental policy, 1/3 unit environmental philosophy, and 1/3 unit environmental history.

MAJOR QUALIFYING PROJECT (1 UNIT)

The MQP is expected to provide an integrative capstone research experience in Environmental Studies. Several types of MQPs are possible: a research study in a particular science or social science discipline, a holistic examination of an environmental problem from an interdisciplinary perspective, or a philosophical or historical analysis of an environmental issue. WPI faculty from academic disciplines including biology, chemistry, economics, geography, history, philosophy, psychology and public policy are associated with the Environmental Studies program and can advise Environmental Studies MQPs related to their area of expertise.

ENVIRONMENTAL IQP OPPORTUNITIES

WPI students can complete an IQP in a wide variety of areas at the intersection of society and technology, and there is no requirement that Environmental Studies students do an environmentally-related IQP. However, for interested students,

numerous opportunities exist for environmental IQPs on campus and at off-campus centers. In a typical academic year, approximately 30 of the 80 IQPs completed at off-campus project centers are environmental in nature. Many other environmentally themed projects are offered on campus as well. Typical project topics include issues of public health, renewable energy, land conservation, air quality and water quality, urban environments, and environmental justice. In some circumstances students may, with the approval of their IQP advisor, their academic advisor, and the Environmental Studies Program Review Committee, complete additional work on an environmental IQP that qualifies the project to count as an Environmental Studies MQP. However, students must still complete two separate, distinct projects, one IQP and one MQP, to meet the requirements for graduation.

MINOR IN ENVIRONMENTAL AND SUSTAINABILITY STUDIES

Students taking minors in environmental studies are expected to designate a member of the Environmental Studies affiliated faculty as their SS minor advisor, who will assist them in preparing a program that meets the requirements of the minor. Students can obtain assistance at the Environmental Studies Program office in designating an advisor.

REQUIREMENTS	UNITS
Environmental Studies Core (Note 1)	2/3
Environmental Social Science and Humanities (Note 2)	1
Environmental Studies Capstone (Note 3)	1/3

NOTES

1. Only courses with the prefix ENV count toward this requirement.
2. Students must either select courses for breadth, or they may choose a thematic set of courses for depth. At least two of these courses should be above the 2000 level. Additional ENV courses not counted toward the core requirement may be counted here. Students may substitute up to two courses in environmental science with the approval of the Environmental Studies Program Review Committee.
3. The capstone requirement will normally be met by taking ENV4400, Senior Seminar in Environmental Studies. With the approval of the Program Review Committee, the capstone requirement may also be fulfilled via independent study. Students are also strongly encouraged to do an environmental/sustainability related IQP.

APPROVED SOCIAL SCIENCE AND HUMANITIES COURSES

ECON 2117	Environmental Economics
GOV 2311	Environmental Policy and Law
GOV 2312	International Environmental Policy
PY 2717	Philosophy and the Environment
HI 2401	U. S. Environmental History
ECON 2125	Development Economics
EN 2237	American Literature and the Environment
HI 2351	History of Ecology
HI 3317	Topics in Environmental History
SD 1510	Introduction to System Dynamics Modeling

Two examples of sequences that satisfy the requirements for an ENV minor:

ENV MINOR WITH BREADTH

Environmental Studies Core	2/3
Environmental Studies Capstone	1/3
BB 2040 Ecology	1/3
HI 2401 US Environmental History	1/3
ECON 2117 Environmental Economics	1/3

ENV MINOR WITH DEPTH (SOCIAL SCIENCE)

Environmental Studies Core	2/3
Environmental Studies Capstone	1/3
GOV 2311 Env Law and Policy	1/3
GOV 2312 Intl. Env Law and Policy	1/3
ECON 2117 Environmental Economics	1/3

Many other sequences are possible.

FIRE PROTECTION ENGINEERING

K. A. NOTARIANNI, HEAD

PROFESSOR: N. A. Dembsey

ASSOCIATE PROFESSORS: L. Albano, B. Meacham, K. A. Notarianni

ASSISTANT PROFESSORS: A. Rangwala, A. Simeoni

PROFESSOR OF PRACTICE: M. Puchovsky

FPE EMERITUS: R. W. Fitzgerald, D. A. Lucht, R. E. Zalosh

ADJUNCT FPE FACULTY: J. Averill, D. Sheppard, J. Tubbs, C. Wood

MISSION STATEMENT

To deliver a high quality fire protection engineering education program for both full-time students and practicing professionals, supported by fire research in selected areas of strength.

PROGRAM EDUCATIONAL OBJECTIVES

- To deliver a comprehensive fire protection engineering degree/certificate program that is consistent with changes in technology and the environment.
- To maximize the use of educational technology to deliver for-credit courses to both part time and full time students, on and off campus worldwide.

COMBINED BS/MS DEGREE PROGRAM

A combined-degree program is available for those undergraduate students having a strong interest in fire protection. This program provides students with the opportunity to accelerate their graduate work by careful development of their undergraduate plan of study leading to a Bachelor degree in a field of engineering and a master's degree in fire protection engineering. The combined-degree approach saves time and money since up to 40 percent of course credits counted towards the Master's degree can also be counted toward the Bachelor degree. Holders of a Bachelor degree in traditional engineering or science disciplines and the Master's degree in fire protection engineering enjoy extremely good versatility in the job market.

FIRE PROTECTION ENGINEERING

FIVE-YEAR PROGRAM

High school seniors can be admitted to the combined-degree program as freshmen, allowing them to complete both a bachelor's degree in a selected field of engineering followed by the master's degree in fire protection engineering, in a total of five years.

HUMANITIES AND ARTS

K. BOUDREAU, HEAD

PROFESSORS: F. Bianchi, K. Boudreau, J. J. Brattin, S. C. Bullock, D. B. Dollenmayer, B. Faber, R. S. Gottlieb, J. P. Hanlan, K. P. Ljungquist, W. T. Mott, L. E. Schachterle, S. Vick

ASSOCIATE PROFESSORS: W. A. B. Addison, Jr., C. Clark, M. Ephraim, J. Farbrook, P. H. Hansen, J. McWeeny, A. A. Rivera, T. Robertson, J. Rosenstock, J. Rudolph, M. D. Samson, J. Sanbonmatsu, E. Shim, R. L. Smith

ASSISTANT PROFESSORS: S. Barton, J. Cocola, B. Eddy, J. DeWinter, A. Madan Smith, V. Manzo, D. Spanagel, J. Urang

TEACHING FACULTY: W. Baller, R. Bigonah, E. Boucher, U. Brisson, J. Delorey, J. Dempsey, R. Falco, D. Gray, M. Halpine, L. Higgins, I. Matos-Nin, S. Nikitina, R. Madan Smith, E. Stone, D. Weeks

ADJUNCT FACULTY: J. L. Forgeng, M. Keller, P. Kirby, B. L. McCarthy, R. J. Njoroge, J. R. Policelli, S. Runstrom, J. E. Watters, J. Zinn

PROFESSORS EMERITUS: L. Curran, L. Fontanella, E. Hayes, C. Heventhal, J. Manfra, D. McKay, L. Menides, E. M. Parkinson, T. Shannon, M. Sokal, J. Zeugner

MISSION STATEMENT

We are committed to helping students develop both a knowledge of, and an ability to think critically about, the humanities and arts. We also seek to foster the skills and habits of inquiry necessary for such learning: analytical thought, clear communication, and creative expression. Such an education, we believe, provides a crucial foundation for responsible and effective participation in a complex world.

Program Distribution Requirements for the Humanities and Arts Major

REQUIREMENTS	MINIMUM UNITS
1. Humanities and Arts (including MQP) (Note 1)	6
2. Mathematics and Science (Note 2)	2
3. Electives (Note 3)	2

NOTES:

- Humanities and Arts majors may choose to complete 2 units of work and an MQP in one of the following areas of concentration: History, Literature, Music, Philosophy/Religion, Drama/Theatre, Writing and Rhetoric, Art or Art History, German Studies, Hispanic Studies, American Studies, Environmental Studies, or Humanities Studies of Science and Technology. The remaining 3 units of work may be from any area within the Humanities and Arts except that no less than 1 unit should be from an area of Humanities and Arts outside of the area of the student's main concentration.
- Must include 2/3 units in mathematics and 2/3 units in basic science. The remaining 2/3 unit may be from mathematics, basic science or computer science.
- May be from any area except Air Force Aerospace Studies, Military Science, or Physical Education. Courses used to satisfy other degree requirements (i.e. the IQP) may not be used to fulfill this requirement.

CONCENTRATIONS FOR HUMANITIES AND ARTS MAJORS

Humanities and Arts majors may focus their studies by choosing a Concentration within a specific area of the Humanities and Arts, or within an interdisciplinary area closely related to the Humanities and Arts. Concentrations within the Humanities and Arts Department comply with WPI's requirements for Concentrations. Students must complete an MQP and two units of integrated study in the area of their Concentration. Concentrations within the Humanities and Arts (History, Literature, Music, Philosophy, Religion, Drama/Theatre, Writing and Rhetoric, Art History, German Studies, Hispanic Studies) require two units of work in an area designated by specific disciplinary course prefixes, as described below. For example, a Concentration in History requires two units of HI courses at the 2000 level or higher and an MQP in history. Concentrations that are interdisciplinary in nature (American Studies, Environmental Studies, and Humanities Studies of Science and Technology) each require that courses be selected from specific lists of designated courses.

All of these Concentrations are excellent preparation for a variety of careers. Graduates of the Humanities and Arts major have gone to law, business, and medical schools, as well as to graduate programs in the discipline of their Humanities and Arts concentration. Some graduates have pursued careers as writers, teachers, engineers, or scientists. Other students have found work in the theatre as actors, technicians, or playwrights, or in music as composers or performers. The advantages our graduates find in their pursuit of further study and careers are the advantages of a rigorous study of the liberal arts: a good foundation in our cultural traditions and the cultural diversity of the world, and strong skills in research, analysis, writing, or performance.

In addition, since each Humanities and Arts major completes some technical work, either via the Distribution Requirements or a double major in a technical field, our graduates receive unique preparation as technological humanists. This educational experience gives them a distinct advantage in many fields in which a solid knowledge of engineering or science is increasingly valuable, such as environmental studies, drama/theatre, or business. The Humanities and Arts major equips students with vital general professional skills and with broad cultural and technical perspectives. Our many courses devoted to international issues or to foreign languages and the active involvement of Humanities and Arts faculty in the university's global programs provides superb training for technological humanists interested in international issues. Whatever their specific area of concentration, majors in the Humanities and Arts gain an intellectual curiosity and openness to the diversity of human cultural achievements that will enrich their lives and enhance their careers.

REQUIREMENTS

At least 6 units of work in HUA (see “Note 1” under “Program Distributions Requirements for the Humanities and Arts Major”) including the following special requirements for each concentration:

Humanities and Arts with History Concentration

2 units of HI (2000 level or higher) and MQP in History

Humanities and Arts with Literature Concentration

2 units of EN, TH, or RH (2000 level or higher) and MQP in Literature

Humanities and Arts with Music Concentration

2 units of MU (2000 level or higher) and MQP in Music

Humanities and Arts with Philosophy Concentration

2 units of PY (2000 level or higher) and MQP in Philosophy

Humanities and Arts with Religion Concentration

2 units of RE (2000 level or higher) and MQP in Religion

Humanities and Arts with Drama/Theatre Concentration

2 units of TH, EN, or RH (2000 level or higher) and MQP in Drama/Theatre

Humanities and Arts with Writing and Rhetoric Concentration

2 units of WR (2000 level or higher) and MQP in Writing and Rhetoric

Humanities and Arts with Art History Concentration

2 units of AR or HU and MQP in Art History

Humanities and Arts with German Studies Concentration

2 units of GN (2000 level or higher) and MQP in German Studies

Humanities and Arts with Hispanic Studies Concentration

2 units in SP (2000 level or higher) and MQP in Spanish

HUMANITIES AND ARTS WITH AMERICAN STUDIES CONCENTRATION

This interdisciplinary concentration examines American culture from the multiple perspectives of American history, literature, and politics. American Studies at WPI takes advantage of the unparalleled resources at the American Antiquarian Society.

1. 1/3 units: one of the following courses: HU 1411 Introduction to American Studies, EN 1231 Introduction to American Literature, EN 1257 Introduction to African American Literature and Culture, HI 1311 Introduction to American Urban History, HI 1312 Introduction to American Social History, or HI 1314 Introduction to Early American History.
2. 2/3 units from List 1 (“American History”)
3. 2/3 units from List 2 (“American Literature”)
4. 1/3 units from List 3 (“American Politics, Law, and Policy”). This may not include courses taken to fulfill the Social Science Requirement.
5. MQP in American Studies

List 1. American History:

HI 2311	American Colonial History
HI 2313	American History, 1789-1877
HI 2314	American History, 1877-1920
HI 2315	The Shaping of Post-1920 America

HI 2316	American Foreign Policy from Woodrow Wilson to the Present
HI 2317	Law and Society in America, 1865-1910
HI 3311	American Labor History
HI 3312	Topics in American Social History
HI 3314	The American Revolution
HI 3333	Topics in American Technological Development

List 2. American Literature:

EN 2221	American Drama
EN 2231	American Literature: The Raven, the Whale, and the Woodchuck
EN 2232	American Literature: Twain to the Twentieth Century
EN 2233	American Literature: Twentieth Century
EN 2234	Modern American Novel
EN 2235	The American Dream: Myth in Literature and the Popular Imagination
EN 2237	American Literature and the Environment
EN 2238	American Realism
EN 3221	New England Supernaturalism
EN 3232	The Concord Writers
EN 3233	Worcester Between the Covers: Local Writers and Their Works
EN 3224	Modern American Poetry
EN 3237	Pursuing <i>Moby-Dick</i>

List 3. American Politics, Law, and Policy:

GOV 1301	U.S. Government
GOV 1303	American Public Policy
GOV 1310	Law, Courts, and Politics
STS 1207	Introduction to the Psycho-sociology of Science
GOV 2302	Science-Technology Policy
STS 2208	The Society-Technology Debate
GOV 2304	Governmental Decision Making and Administrative Law
GOV 2310	Constitutional Law

HUMANITIES AND ARTS WITH ENVIRONMENTAL STUDIES CONCENTRATION

This interdisciplinary concentration combines course work from the humanities and arts, social sciences, and other areas to examine environmental issues.

1. 3/3 units from List 1 (“Designated Environmental Courses in Humanities”)
2. 2/3 units from List 2 (“Related Environmental Courses in Social Sciences”). These may not include courses taken to fulfill the Social Science Requirement.
3. 1/3 units from List 3 (“Environmental Courses in Other Areas”)
4. MQP in Environmental Studies

List 1. Designated Environmental Courses in Humanities:

AR 2114	Modern Architecture in the American Age
EN 2237	American Literature and the Environment
HI 1311	Introduction to American Urban History
HI 1341	Introduction to Global History
HI 2353	History of the Life Sciences
HI 2401	U.S. Environmental History
HI 3331	Topics in the History of European Science and Technology
HI 3333	American Technological Development
HI 3335	Topics in the History of Non-Western Science and Technology
PY 2712	Social and Political Philosophy
PY 2713	Bioethics
PY 2717	Philosophy and the Environment

List 2. Related Environmental Courses in Social Sciences:

ECON 2117	Environmental Economics
ECON 2125	Development Economics
GOV 2312	International Environmental Policy
ENV 2400	Environmental Problems and Human Behavior

List 3. Environmental Courses in Other Areas:

BB 2040	Principles of Ecology
CHE 3910	Chemical and Environmental Technology
CHE 3920	Air Quality Management
CE 3059	Environmental Engineering
CE 3070	Urban and Environmental Planning
CE 3074	Environmental Analysis
ME 3422	Environmental Issues and Analysis

HUMANITIES AND ARTS WITH HUMANITIES STUDIES OF SCIENCE AND TECHNOLOGY CONCENTRATION

This interdisciplinary concentration enables students to apply the methods of the humanities and social sciences to the study of science and technology.

1. 2/3 units from List 1 (“Designated HSST Courses”)
2. 2/3 units from List 1 or List 2 (“Closely Related Courses in Humanities”)
3. 2/3 units from List 3 (“Science-Technology-Studies Courses in Other Areas”). These may not include courses taken to fulfill the Social Science Requirement.
4. MQP in Humanities Studies of Science and Technology

List 1: Designated HSST Courses

EN 2252	Science and Scientists in Modern Literature
EN 3215	Genres of Science Writing
HI 1331	Introduction to the History of Science
HI 1332	Introduction to the History of Technology
HI 2331	Science, Technology, and Culture in the Early American Republic
HI 2332	History of Modern American Science and Technology
HI 2352	History of the Exact Sciences
HI 2353	History of the Life Sciences
HI 2354	History of the Physical Sciences
HI 2401	U.S. Environmental History
HI 2402	History of Evolutionary Thought
HI 3317	Topics in Environmental History
HI 3331	Topics in the History of European Science and Technology
HI 3335	Topics in the History of Non-Western Science and Technology
PY 2713	Bioethics
PY 2717	Philosophy and the Environment

List 2: Closely Related Courses in Humanities

AR 3112	Modernism, Mass Culture, and the Avant-Garde
HI 1311	Introduction to American Urban History
HI 2324	Industry and Empire in British History
HI 3311	American Labor History
HI 3323	Topics in the Western Intellectual Tradition
PY 2711	Philosophical Theories of Knowledge and Reality

List 3: Science-Technology-Studies Courses in Other Areas.

AR/ID 3150	Light, Vision and Understanding and the Scientific Community
STS 1207	Introduction to the Psycho-Sociology of Science
STS 2208	The Science-Technology Debate
GOV 2302	Science-Technology Policy
GOV 2304	Governmental Decision Making and Administrative Law
GOV 2312	International Environmental Policy

DOUBLE MAJOR IN HUMANITIES AND ARTS

Students may pursue a double major in Humanities and Arts and any area of study at WPI. To pursue the double major, a student must satisfy the degree requirements of both disciplines including an MQP and Distribution Requirements. The double major in Humanities and Arts requires 6 units of studies in the Humanities and Arts, including the MQP and Inquiry Seminar or Practicum. Students interested in pursuing this option should contact Prof. B. Addison, Salisbury Labs, for additional information.

PROFESSIONAL WRITING

CO-DIRECTORS: C. DEMETRY (ME) and J. DeWINTER (HUA)

ASSOCIATED FACULTY: E. Boucher (HUA), M. Elmes (MG), B. Faber (HUA & MG), L. Higgins (HUA), A. Madan (HUA), R. Madan (HUA), A. Rivera (HUA), R. Smith (HUA)

The goal of the Professional Writing program is to prepare professionals to communicate scientific or technical content to a variety of specialized and non-specialized audiences in useful and accessible ways.

Professional Writing is an interdisciplinary major or double major that combines work in written, oral, visual, and data-based communication with a strong concentration in a scientific or technical field. Students receive individual attention from academic advisors as they design a plan of study that fulfills the program’s distribution requirements and best suits their intellectual interests and career aspirations. Majors can select courses and projects in a variety of areas, such as:

- Science writing, medical writing, health communication
- Writing in the public interest, writing for non-profits
- Digital media, visual communication, information design
- Bilingual professional communication, translation

The Professional Writing major provides excellent preparation for students interested in careers in technical and scientific communication, writing and editing, web authoring, information design, public relations, medical writing, translation, and intercultural communication. It prepares students for graduate work. Finally, it prepares professionals in scientific or technical fields to be lead communicators in their careers.

MQP opportunities are available on campus and with local companies, newspapers, public agencies, and private foundations. More information about project and career opportunities for Professional Writing majors can be found on the program website: <http://www.wpi.edu/academics/pwr.html>

Program Distribution Requirements for the Professional Writing Major

REQUIREMENTS	MINIMUM UNITS
1. Scientific and/or technical concentration (Note 1)	6
2. Writing and Rhetoric (WR) concentration (Note 2)	3
3. MQP (Note 3)	1

NOTES:

- The student's scientific and/or technical concentration must be a plan of study, approved by the student's program review committee, with a clear underlying rationale in mathematics, basic science, computer science, engineering, and/or management
- The Writing and Rhetoric concentration consists of 3 units from the 2 following categories.
 - Writing and Rhetoric (2 units)** from any of the existing WR courses or equivalent ISPs. This must include WR 3112: Rhetorical Theory unless a substitution is authorized by the student's program review committee, which will be granted only under unusual circumstances. No more than one course at the 1000-level can be applied, and students must complete at least one 4000-level course in WR.
 - Electives (1 unit)**
The 1 unit of electives must be coherently defined and approved by the student's program review committee. Students may draw on:
 - Courses in Writing and Rhetoric not used to fulfill the above 2 units requirement;
 - Courses in science, technology, and culture studies (such as AR/ID 3150, CS 3041, CS 3043, EN 2252, HI 2334, HI 2402, HI 3331, HI 3333, HI 3334, IMGD 2000, IMGD 2001, STS 2208, GOV 2302, PSY 2406);
 - Philosophy and ethics courses (such as PY 2711, PY 2713, PY 2714, PY 2716, PY 2717, PY/RE 2731, PY/RE 3731);
 - Foreign language courses;
 - Management courses (such as MIS 4781, OBC 4365, OBC 3351, OIE 3420, MKT 3600, MIS 4740, MIS 3740, MIS 3720, MIS 3700, OIE 3450, BUS 2080).
- The MQP should build on the student's scientific and technical concentration while articulating a problem within professional writing.

HUMANITIES AND ARTS MINORS

Minors can be arranged in areas other than the above. See a professor in the appropriate discipline for further information about minors in other areas and interdisciplinary minors.

DRAMA/THEATRE

The minor in Drama/Theatre is for students who choose to continue their studies in Drama/Theatre beyond the Humanities and Arts Requirement without majoring in Drama/Theatre. Students who, for personal or career purposes, wish to earn official recognition of their achievements in Drama/Theatre, and who do not have academic time to fulfill the requirements for the major, should consider the Drama/Theatre minor.

Because performance, including design and production, is an integral component of Drama/Theatre, the requirements for this minor contain a performance emphasis. The Drama/Theatre minor consists of 2 units of work distributed as follows:

- Drama/Theatre Courses: 1 1/3 units chosen from among the following:
EN 1221, EN 1222, EN 2221, EN 2222, EN 2224, EN 3222, EN 3223, EN 3224, or any IS/P designated TH.
- Drama/Theatre Performances: 1/3 unit (at least two 1/6 unit TH IS/P, Independent Study/Projects).
- Drama/Theatre Capstone Experience: 1/3 unit Performance Independent Study/Project (EN or TH). The student, with faculty guidance, will perform, design, direct, produce or in some other way create a Drama/Theatre presentation that demonstrates the student's skill and knowledge.

No more than 1 unit of work for the Humanities and Arts Requirement may be applied to the Drama/Theatre minor. The final Inquiry Seminar or Practicum may not be counted toward the minor.

Any student at WPI is eligible to pursue the Minor in Drama/Theatre except for students majoring in Humanities and Arts with a concentration in Drama/Theatre.

ENGLISH

The minor in English is for students who choose to continue their studies in English beyond the Humanities and Arts Requirement without majoring in English. Students who, for personal or career purposes, wish to earn official recognition of their achievements in English, and who do not have academic time to fulfill the requirements for the major, should consider an English minor. Interested students should speak with one of the English faculty in the Department of Humanities and Arts.

The English minor consists of a total of two units of work in English, distributed in the following way:

- 5/3 units of literature (usually EN) courses, which must include a minimum of one 3000-level course and a maximum of one 1000-level course.
- 1/3 unit English Capstone Experience. This can be either a 1/3 unit Independent Study/Project in English or a 3000-level course approved by the student and advisor.

No more than one unit of work for the Humanities and Arts Requirement may be applied toward the English minor. Any student at WPI is eligible to pursue the Minor in English except for students majoring in Humanities and Arts with a concentration in Literature.

FOREIGN LANGUAGE (GERMAN OR SPANISH)

The minor in Foreign Language can be completed in either German or Spanish. It allows students who are well prepared to continue their study of the language and its culture well beyond the advanced level. The minor consists of a total of two units of work, distributed in the following way:

- 1 unit of intermediate and advanced language courses in Spanish or German chosen from the following:
 - SP 2522, SP 3521, SP 3522, or higher or
 - GN 2512, GN 3511, GN 3512, or higher.

(This unit may be double-counted toward the Humanities and Arts Requirement. No more than one unit may be double-counted in this way.)

2. 2/3 unit of advanced literature and culture courses chosen from the following:
 - SP 3523, SP 3524, SP 3525, SP 3526, or Consortium courses approved by a faculty member in Spanish or
 - GN 3513, GN 3514, or Consortium courses approved by a faculty member in German.
 - Any 3000-level experimental course in GN or SP may also be used.
3. 1/3 unit capstone experience consisting of an IS/P written in the foreign language.

(If, in the future, there are enough German and Spanish minors combined, the capstone independent study will be a team-taught seminar in comparative civilization/literature.) Interested students should see the following professors in the Humanities and Arts Department: Prof. Dollenmayer (for German) or Prof. Rivera (for Spanish).

HISTORY

The minor in History offers students the opportunity to extend their study of History beyond the Humanities and Arts Requirement without majoring in History. Students who, for personal or career purposes, wish to earn official recognition of their achievements in History, and who do not have academic time to fulfill the requirements for the major, should consider the History minor. Students interested in declaring a minor should speak with one of the history faculty in the Department of Humanities and Arts. The History minor consists of a total of two units of work in history distributed as follows:

1. 5/3 units of history (HI) courses, which must include a minimum of 1 3000-level course and a maximum of one 1000-level course.
2. 1/3 unit History Capstone Experience. This can be either a 1/3 unit Independent Study/Project in History or a 3000-level HI course identified by the student and instructor as the 3000-level capstone course for the student's program. Inquiry Seminars are not eligible to count as capstone courses for the minor. The capstone course must be taken last.
3. No more than one unit of work for the Humanities and Arts Requirement may be applied toward the History minor. Any student at WPI is eligible to pursue the Minor in History except for students majoring in Humanities and Arts with a concentration in History.

MUSIC

The minor in Music is for students who choose to continue their studies in Music beyond the Humanities and Arts Requirement without majoring in Music. Students who, for personal or career purposes, wish to achieve official recognition of their achievements in Music, yet do not find the time to fulfill the requirements for the major, should consider the Music minor option. Interested students should speak with one of the music faculty in the Department of Humanities and Arts. Because performance is an integral component of music study, the proposed minor will contain performance emphasis and consist of two units of work distributed as follows:

1. 1/3 unit for participation in MU IS/P Ensembles.
2. 1/3 unit Performance IS/P as the capstone experience. Student, with faculty guidance, will present a recital, original composition, or other musical performance that demonstrates the student's skill and knowledge.
3. 1 1/3 units of music courses.
4. If a student completes his/her Humanities and Arts Requirement in music, 1 unit of that work may be applied to the minor except for the final IS/P.
5. A student who is pursuing a major in Humanities and Arts with music as the major field cannot also receive a minor in music.

WRITING AND RHETORIC

The minor in Writing and Rhetoric offers students the opportunity to extend their study of writing and rhetoric beyond the Humanities and Arts Requirement without majoring in either the Writing and Rhetoric concentration in Humanities and Arts or the interdisciplinary Professional Writing program. Students interested in declaring a minor should obtain a minor declaration form so that they are assigned an advisor early in the process. Contact Jennifer deWinter (jdewinter@wpi.edu) for more information.

The minor consists of two units of work, distributed in the following way:

1. 1/3 unit. Core course in Writing and Rhetoric: WR 3112 or equivalent.
2. 1-1/3 unit. Electives in writing and rhetoric (WR). If there is good reason, and with the approval of the Program Review Committee, electives may also include courses in art history, literature (in English or other languages), and philosophy and religion.
3. 1/3 unit. Capstone course WR 4111 unless an Independent Study Project (ISP) substitution is authorized by the student's program review committee, and will be granted only under unusual circumstances. Should students receive permission to complete the capstone with an IS/P, then those students should submit and have approved a one-page proposal for their capstone to the Program Review Committee the term before they intend to complete it.

No more than 1 unit of course work may be double-counted toward the Humanities and Arts Requirement. Students interested in this area also may wish to consider the major in Professional Writing (see catalog rules for minors).

INTERACTIVE MEDIA AND GAME DEVELOPMENT

DIRECTOR: M. CLAYPOOL (CS)

CO-DIRECTOR: J. ROSENSTOCK (HUA)

ASSOCIATED FACULTY: E. Agu (CS), F. Bianchi (HUA), K. Boudreau (HUA), M. Claypool (CS), D. Cyganski (ECE), J. deWinter (HUA), J. Farbrook (HUA), D. Finkel (CS), J. Forgeng (HUA), N. Heffernan (CS), R. Lindeman (CS), B. Moriarty (IMGD), D. O'Donnell (IMGD), G. Phillis (PH), C. Rich (CS), J. Rosenstock (HUA), B. Snyder (IMGD), J. Sanbonmatsu (HUA), M. Ward (CS), C. Wills (CS), K. Zizza (IMGD)

PROGRAM OUTCOMES

The specific outcomes for the WPI IMGD major are that all graduates will:

1. Understand Artistic and Technical areas related to IMGD.
2. Demonstrate an in-depth understanding of either the Artistic or Technical area related to IMGD.
3. Have a base of technical knowledge in Computer Science, Mathematics and Science.
4. Have a base of artistic knowledge in Art, Music and English.
5. Successfully complete a team-based, multi-term IMGD project.
6. Successfully complete a group project with both Technical and Artistic IMGD majors.
7. Be able to creatively express and analyze artistic forms relative to IMGD.
8. Communicate effectively orally, in writing, and in visual media.
9. Be aware of social and philosophical issues pertaining to games and related media.
10. Successfully complete team-based, full-term IMGD projects.

Program Distribution Requirements for the Interactive Media and Game Development Major

REQUIREMENTS	MINIMUM UNITS
Core IMGD (Note 1)	2/3
Math	1/3
Science	1/3
Computer Science (Note 2)	1/3
Social and Philosophical Issues (Note 3)	1/3
Studio Art (Note 4)	1/3
Audio Arts (Note 5)	1/3
English (Note 6)	1/3
IMGD (Note 7)	5/3
Major Qualifying Project	3/3

In addition to the requirements listed above, students must satisfy one of the two area requirements, Technical (Computer Science) or Artistic (Humanities and Arts):

AREA	MINIMUM
Computer Science (Note 8)	10/3
Visual Arts (Notes 9, 10, 11, 12, 13)	10/3

Students have electives that can be tailored to meet specific degree requirements and interests:

ELECTIVES	MINIMUM
Total Electives (Note 14)	3/3

NOTES:

1. Choose from: Critical Studies of Interactive Media and Games (IMGD 1000), The Game Development Process (IMGD 1001), Storytelling in Interactive Media and Games (IMGD 1002).
2. CS 2022 and CS 3043 may not be used to satisfy this requirement.
3. Choose from Social Issues in Interactive Media Games (IMGD 2000) or Philosophy and Ethics of Computer Games (IMGD 2001).
4. Choose from: Essentials of Art (AR 1100) or Digital Imaging and Computer Art (AR 1101).
5. Choose from: Computer Techniques in Music (MU 3611), Computers and Synthesizers in Music (MU 3612), Digital Sound Design (MU 3613), or Game Audio 1 (IMGD 2030).
6. Courses with the prefix EN, WR or RH.
7. Must include (IMGD 3000 and IMGD 4000) or (IMGD 3500 and IMGD 4500).
8. At least 4/3 from: Human-Computer Interaction (CS 3041), Software Engineering (CS 3733, CS 4233), Computer Architecture (CS 4515), Computer Networks (CS 3516, CS 4516), Graphics (CS 4731), Animation (CS 4732), or Artificial Intelligence (CS 4341)
9. 3/3 from Humanities and Arts or IMGD.
10. 1/3 from Art History
11. 6/3 from Visual Arts, chosen from the following list:
 - Essentials of Art (AR 1100) or Digital Imaging and Computer Art (AR 1101) (whichever was not taken for the Studio Art requirement – Note 4)
 - Figure Drawing (AR 2202)
 - Digital Painting (IMGD 2700/AR 2700)
 - 3D Modeling (IMGD 2101/AR 2101)
 - 3D Modeling II (IMGD 3101/AR 3101)
 - Machinima (Film Making in Virtual Environments) (IMGD 2005)
 - The Art of Animation (IMGD 2201/AR 2201)
 - Animation II (IMGD 3201/AR 3201)
 - Concept Art and Creative Illustration (IMGD 3700/AR 3700)
12. At least 5/3 units at the 2000-level or higher.
13. Students completing the Artistic (Humanities and Arts) Area Requirement must complete a Technical Requirement, described below.
14. Electives must be chosen from the following areas: Computer Science, Humanities and Arts, Interactive Media and Game Development, Mathematics, Science, Social Science, Management.

TECHNICAL REQUIREMENT

Each student choosing the Artistic IMGD area will fulfill a Technical Requirement consisting of six courses as follows:

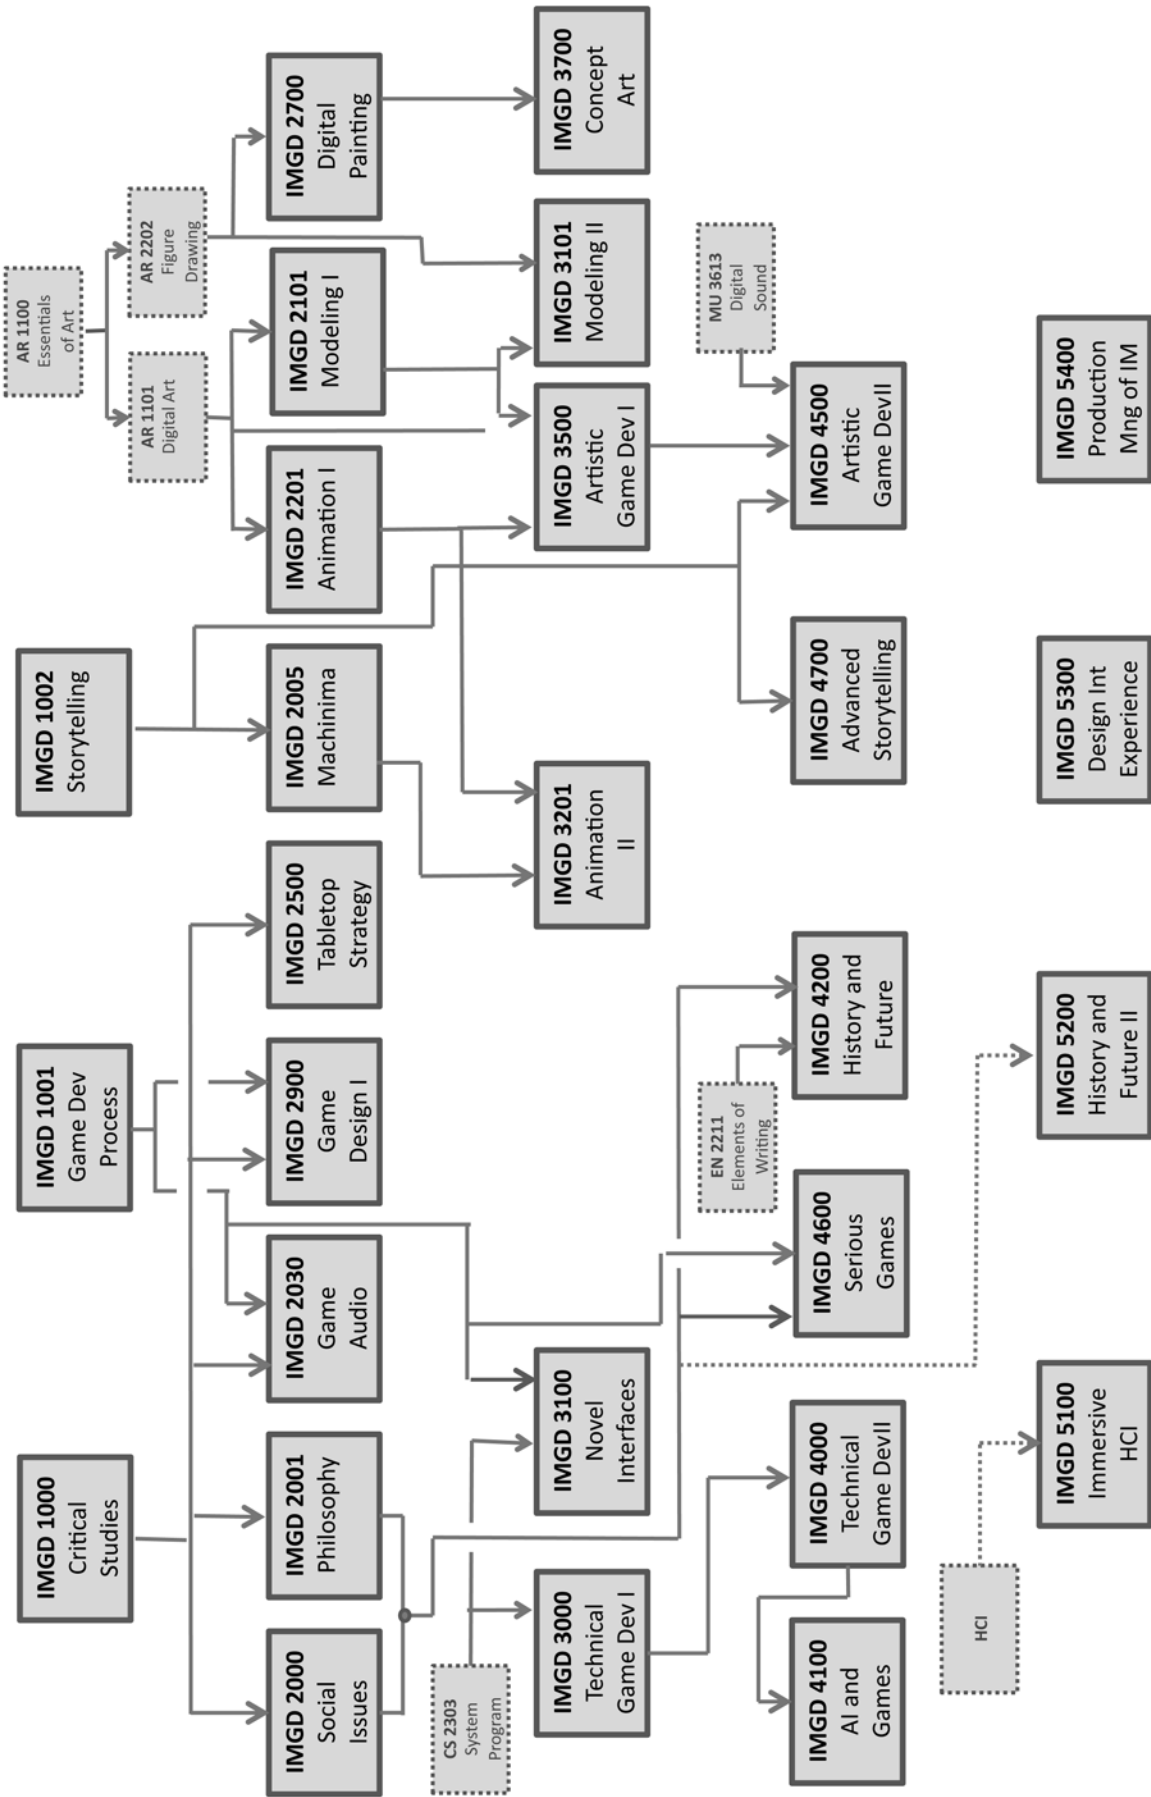

A. Courses required for all IMGD majors:

1. One Mathematics Course
2. One CS course, not including CS 2022 or 3043
3. One Science (BB, CH, GE, PH) course

B. Additional requirements:

4. A second course in Computer Science, not including CS 2022 or 3043

INTERACTIVE MEDIA AND GAME DEVELOPMENT (IMGD) COURSE FLOW CHART

- Two additional courses from among Mathematical Sciences, Computer Science, Science (BB, CH, GE, PH) and Engineering (BME, CE, CHE, ECE, ES, FPE, ME, RBE), not including CS 3043.

The courses for the Technical Requirement, part A, are satisfied by the IMGD distribution requirements. The courses in part B may not double-count towards other IMGD requirements, including IMGD elective courses.

MINOR IN INTERACTIVE MEDIA AND GAME DEVELOPMENT

The Interactive Media and Game Development Minor is for students who, for personal or career purposes, wish to earn official recognition of their achievements in IMGD, but do not have academic time to fulfill the requirements for the major.

A total of six IMGD courses are required for the Minor degree requirement. This consists of:

2 core IMGD courses from this list:

- IMGD 1000. Critical Studies of Interactive Media and Games
- IMGD 1001. The Game Development Process
- IMGD 1002. Storytelling in Interactive Media and Games

3 additional IMGD courses. If necessary for the academic goals of a student's minor program, and with prior approval of the IMGD Minor Coordinator, may include one course in art history, visual art, creative writing and rhetoric, theatre, or music.

1 3000 or higher level IMGD course as a final capstone.

General WPI rules that apply to the Minor are that at most three courses can be double-counted for any other degree requirement, and the capstone course cannot be a double-counted course.

Students interested in pursuing the Minor should speak with an IMGD advisor about the rules of pursuing the Minor, as well as finding a capstone course and any related background courses.

Sample Programs of Study:

Visual Art

- IMGD 1001. The Game Development Process
- IMGD 1002. Storytelling in Interactive Media and Games
- IMGD 2101/AR 2101. 3D Modeling I
- IMGD 2700/AR 2700. Digital Painting
- IMGD 3201/AR 3201. 3D Modeling II
- IMGD 3700 Concept Art and Creative Illustration

Creative Writing/Game Design

- IMGD 1000. Critical Studies of Interactive Media and Games
- IMGD 1002. Storytelling in Interactive Media and Games
- IMGD 2500. Design of Tabletop Strategy Games
- IMGD 2900. Digital Game Design I
- IMGD 4700. Advanced Storytelling: Quest Logic and Level Design
- RH 3211. Rhetoric of Visual Design

Animation

- IMGD 1001. The Game Development Process
- IMGD 1002. Storytelling in Interactive Media and Games
- IMGD 2005. Machinima (Film Making in Virtual Environments)
- IMGD 2101/AR 2101. 3D Modeling I
- IMGD 2201/AR 2201. The Art of Animation I
- IMGD 320X. The Art of Animation II

Audio Arts

- IMGD 1000. Critical Studies of Interactive Media and Games
- IMGD 1001. The Game Development Process
- IMGD 2030. Game Audio I
- IMGD 300x/AR 300x. Inter-media Electronic Arts
- IMGD 3500 Artistic Game Development I
- IMGD 302x. Game Audio II

Technical Development

- IMGD 1000. Critical Studies of Interactive Media and Games
- IMGD 1001. The Game Development Process
- IMGD 3000. Technical Game Development I
- IMGD 4000. Technical Game Development II
- IMGD 3100. Novel Interfaces For Interactive Environments
- IMGD 4100. Artificial Intelligence for Interactive Media and Games

Game Studies

- IMGD 1000. Critical Studies of Interactive Media and Games
- IMGD 1001. The Game Development Process
- IMGD 1002. Storytelling in Interactive Media and Games
- IMGD 2000. Social Issues in Interactive Media and Games
- IMGD 2001. Philosophy and Ethics of Computer Games
- IMGD 4200. History and Future of Immersive and Interactive Media

INTERDISCIPLINARY AND GLOBAL STUDIES

DEAN: R. F. VAZ

ASSOCIATE DEAN: K. J. RISSMILLER

ASSOCIATE PROFESSORS: S. Jiusto, R. Krueger

ASSOCIATE TEACHING PROFESSORS: F. Carrera, D. Golding, C. Peet

ASSISTANT TEACHING PROFESSORS: C. Dehner, I. Shockey

ADJUNCT TEACHING PROFESSORS: S. Tuler, S. Vernon-Gerstenfeld

SENIOR LECTURER: R. Hersh

In addition to overseeing the Interactive Qualifying Project (see page 17) and the Global Perspective Program (see page 19), the Interdisciplinary and Global Studies Division (IGSD) provides the support structure for students who construct individually-designed (ID) majors which cannot readily be accommodated in traditional academic departments.

ID majors may be defined in any area of study where WPI's academic strengths can support a program of study, and in which career goals exist. Many combinations of technical and non-technical study are possible. Do not be limited by the example given here; if you have questions about what programs at WPI are possible, please see Prof. R. Vaz in the Project Center to discuss how WPI can assist you in reaching your goals.

PROCEDURE FOR ESTABLISHING AN INTERDISCIPLINARY (INDIVIDUALLY-DESIGNED) MAJOR PROGRAM

Students who wish to pursue an individually-designed major program should first discuss their ideas with their academic advisor. The student should then consult with the dean of the IGSD, Prof. Richard Vaz, who will determine, with the assistance of other members of the faculty, if the proposed program is feasible, and, if it is, arrange for its evaluation.

The following procedures will be followed for feasible programs:

1. The student must submit to the dean of the IGSD an educational program proposal, including a "definition of scope," and a concise statement of the educational goals of the proposed program. Goals (such as graduate school or employment) should be specified very clearly. The proposal must be detailed in terms of anticipated course and project work. The proposal must be submitted no later than one calendar year before the student's expected date of graduation, and normally before the student's third year.
2. The Dean of the Interdisciplinary and Global Studies Division will name a three-member faculty committee, representing those disciplines most involved in the goals of the program, to evaluate the proposal. The committee may request clarification or additional information for its evaluation. The proposal, as finally accepted by the committee and the student, will serve as an informal contract to enable the student to pursue the stated educational goals most effectively.
3. Upon acceptance of the proposal, the student will notify the Office of Academic Advising and the Registrar's Office of the choice of ID (individually-designed) as the designation of major. The IGSD then becomes the student's academic department for purposes of record-keeping.
4. The three-person faculty committee will serve as the student's program advisory committee, and will devise and certify the distribution requirements (up to a limit of 10 units including the MQP) appropriate to the student's program.

INTERNATIONAL STUDIES

DIRECTOR: P. H. HANSEN

ASSOCIATED FACULTY: W.A.B. Addison (HU), E. Boucher-Yip (HU), U. Brisson (HU), F. Carrera (IGSD), D.B. Dollenmayer (HU), L. Elgert (SSPS), M. Elms (BUS), A. Gerstenfeld (BUS), D. Golding (IGSD), P.H. Hansen (HU), R. Hersh (IGSD), S. Jiusto (IGSD), R. Krueger (IGSD), A. S. Madan (HU), I. Matos-Nin (HU), C. Peet (IGSD), M.J. Radzicki (SSPS), K.J. Rissmiller (SSPS), A. Rivera (HU), T. Robertson (HU), J. Rudolph (HU), K. Saeed (SSPS), I. Shockey (IGSD), S. Taylor (BUS), S. Tuler (IGSD), J. Urang (HU), R. Vaz (IGSD; ECE), S. Vernon-Gerstenfeld (IGSD)

International Studies prepares men and women for future leadership roles in business and industry, government and public affairs. International Studies integrates WPI's international courses in the humanities and social sciences with its global projects and exchange programs. International Studies courses on-campus prepare students to go abroad. After an experience overseas, students integrate their experiences and explore their career options in a capstone seminar. International Studies at WPI offers a range of options including a minor, major, or double major in International Studies.

Program Requirements for the International Studies Minor

INTERNATIONAL STUDIES IQP OPTION	MINIMUM UNITS
International Core (Note 1)	1
International Electives (Note 2)	1
International IQP (Note 3)	1
International Experience (Note 4)	0
Total	3

INTERNATIONAL STUDIES EXCHANGE PROGRAM OPTION	MINIMUM UNITS
International Core (Note 1)	1
International Electives (Note 2)	2
International Experience (Note 4)	0
Total	3

NOTES:

1. International Core. Both options require the same one unit core of international courses. One course must be selected from each of these categories:
 - a) An introductory course in international history, such as HI 1341, HI 1321, HI 1322, HI 1323, or HI 1313.
 - b) A course in understanding cross-cultural differences, such as one of the following: HU 3411 Pro-Seminar in Global Perspectives; PSY 2406 Cross-Cultural Psychology; SOC 1202 Introduction to Sociology and Cultural Diversity; PY 2716 Philosophy of Difference.
 - c) HU 4411 Senior Seminar in International Studies.

Courses in the core may not double-count towards other degree requirements such as the Humanities and Arts Requirement requirement or the two course requirement in the Social Sciences. If a student has already counted a course from a) or b) for another requirement, they will be required to take additional courses in International Studies so that at least one unit of their minor does not double-count. The capstone seminar should be the final element of a student's minor.
2. International Electives may be selected from among international courses in the Humanities and Social Sciences. They may include any course in European or global history; any course at the intermediate level or above in German or Spanish; any international course in the social sciences; and international courses approved by the Program Review Committee in art history, literature, philosophy and religion. If approved by the Program Review Committee, PQPs for overseas projects may count towards the total. Students may count courses taken to fulfill other degree requirements towards these electives. These electives may not include the MQP.
3. International IQP: Students who choose the IQP Option must complete an International IQP. All IQPs completed outside of the United States meet this requirement. If approved by the Program Review Committee, IQPs completed on-campus or at Project Centers in the United States may meet this requirement if the IQP is devoted to an international subject and the student also completes a study abroad experience as described in note 4.
4. International Experience: All International Studies minors are required to have a study abroad experience. Students who choose the Exchange Option must complete an international project, exchange, or internship approved by the Program Review Committee. The study abroad experience should be educational in nature and equivalent in length to at least one WPI term.

For general policy on the minor, see description on page 11.

Distribution Requirements for the International Studies Major

REQUIREMENTS	MINIMUM UNITS
International Core (Note 1)	1
International Fields (Note 2)	4
International Experience (Note 3)	0
Science, Technology, Mathematics (Note 4)	2
Electives (Note 5)	2
MQP	1
Total	10

NOTES:

- International Core: One course must be selected from each of these categories:
 - An introductory course in international history, such as HI 1341 or HI 1313, HI 1321, HI 1322, HI 1323.
 - A course in understanding cross-cultural differences, such as one of the following: HU 3411 Pro-Seminar in Global Perspectives, or SOC 1202 Introduction to Sociology and Cultural Diversity, or PSY 2406 Cross-Cultural Psychology; or PY 2716 Philosophy of Difference.
 - HU 4411 Senior Seminar in International Studies.
- International Fields: Majors complete at least one unit of work in each of the following areas. They must also complete at least one additional unit of work in one of these areas, which will be considered their primary field.
 - Historical Analysis. These include any courses in European history, world history, or American foreign policy.
 - Language, Literature, and Culture. These include any course in foreign languages, civilization, and literature offered at WPI or in the Consortium with the prior approval of the Program Review Committee; also courses approved by the Program Review Committee in Art History (e.g. AR 1111, AR 2111), English Literature (e.g. EN 2243, EN 3222), Music History (e.g. MU 2615), or Philosophy and Religion (e.g. RE 2721, RE 2724). Majors who designate Language, Literature, and Culture (LLC) as their primary field may not take courses in a second foreign language unless they have achieved 3000-level proficiency in the first. LLC designees should take most of their courses in a single discipline or in a coherent program approved by the Program Review Committee.
 - Social Sciences. These include international courses in the social sciences (e.g. GOV 1320, ECON 2125, GOV 2312, PSY 2406). Students may count courses taken for the two-course requirement in Social Sciences.
- International Studies majors are required to have a study-abroad experience. (In very unusual cases exceptions may be made to this requirement but only with prior approval of the Director and Program Review Committee). This abroad experience may take the form of a project, exchange, or internship approved by the Program Review Committee. The study-abroad experience should be educational in nature and equivalent in length to at least one WPI term.
- Must include a minimum of 1/3 unit in science, 1/3 unit in mathematics, 1/3 unit in computer science or engineering science. The remaining 1 unit may be from science, mathematics, computer science or engineering. Double-majors may count courses taken for their other major.
- Electives may be from any area except Air Force Aerospace Studies, Military Science or Physical Education. Double-majors may count courses taken for their other major.

DOUBLE MAJOR IN INTERNATIONAL STUDIES

Students may pursue a double major in International Studies and any area of study at WPI except a major in Humanities and Arts. To pursue the double major, a student must satisfy all of the degree requirements for both disciplines, including an MQP and Distribution Requirements. In addition, the double major in International Studies requires the same distribution of courses in the International Core and International Fields as the major in International Studies and a second MQP in International Studies. Double majors are also required to have an International Experience. Students pursuing the double major in International Studies are not required, however, to complete a Humanities and Arts program.

INTERNATIONAL EXPERIENCES

An International Experience may take the form of an international IQP or exchange program. Students often plan their international experience in their Sophomore year. All students are advised to consult the list of projects offered at WPI's Global Project Centers. Each fall, the projects and exchange programs for the following year are widely advertised on campus. For information about student exchange programs, see page 198.

Award-winning projects at WPI are frequently on international topics. Recent examples include studies of a workshop for the blind in London, chemical accidents in Bangkok, the social impact of the building code in New Zealand, and the use of biogas in Botswana. International Studies offers the opportunity not only to complete some of the highest quality projects at WPI, but also to offer solutions to some of the most challenging problems in the world.

Students interested in International Studies may ask any member of the Associated Faculty for more information, or they may consult our page on the World Wide Web: <http://www.wpi.edu/+IN/>.

LIBERAL ARTS AND ENGINEERING (BACHELOR OF ARTS DEGREE)

DIRECTORS: J. ORR (ECE), L. SCHACHTERLE (HU)

ASSOCIATED FACULTY and PROGRAM COMMITTEE:

F. Bianchi (HU), D. DiBiasio (ChE), J. Doyle (SSPS), P. Hansen (HU), F. Hart (CEE), S. Jiusto (IGSD), R. Krueger (IGSD), T. Padir (ECE), K. Rissmiller (IGSD and SSPS), D. Samson (HU), K. Stafford (ME), R. Vaz (IGSD and ECE)

MISSION STATEMENT

The goal of the Liberal Arts and Engineering Bachelor of Arts (BA) degree is to provide an opportunity for students who want a broad background in engineering and other disciplines, as preparation for further studies in engineering or in other fields such as medicine, law, public policy, international studies, business, or wherever a solid technical background would give them a unique edge. The program is also designed to allow students to transfer to an engineering BS program with minimum loss of time.

For more information, see the Admissions web site at <http://www.wpi.edu/Academics/Majors/LAE/index.html>.

PROGRAM EDUCATIONAL OBJECTIVES

The Liberal Arts and Engineering degree recognizes that societal and technological issues are becoming more and more interdependent. Leaders of government, non-profit and for-profit organizations are typically educated in non-engineering disciplines yet increasingly would benefit from a more technological grounding. The Liberal Arts and Engineering major, with its emphasis on problem solving, will prepare students not only for further study in engineering but also for many other high-level careers, such as:

- Law
- Medicine and health care
- Energy policy
- Environmental policy
- Technology policy
- Finance
- Technology management
- International relations
- Public affairs and political service
- Performing arts, especially in music
- Consulting

PROGRAM OUTCOMES

Graduates of the BA in Liberal Arts and Engineering major will have:

- a) an ability to formulate and solve problems requiring knowledge of both technological and societal/humanistic needs and constraints
- b) an ability to apply, as needed, the relevant fundamentals of mathematics, science, engineering, social sciences, and the humanities to solve such problems
- c) an ability to use the techniques, skills, and modern tools necessary for professional practice
- d) an ability to function on multi-disciplinary teams
- e) an understanding of professional and ethical responsibility
- f) an ability to communicate effectively in oral, written and visual modes
- g) a recognition of the need for, and ability to engage in, life-long learning, in response to the ever-increasing pace of change affecting societal needs and opportunities
- h) the broad education necessary to understand the impact of professional solutions in a societal context, both locally and globally.

Minimum Distribution Requirements

REQUIREMENTS	MINIMUM UNITS
1. Mathematics and Basic Sciences (Notes 1, 2)	3
2. Engineering Science and Design (Notes 3, 4, 5)	3
3. Humanities and Arts, Social Science, and Management Topics (Notes 6, 7)	3
4. MQP (Note 8)	1

NOTES:

1. Mathematics must include differential and integral calculus and either probability or statistics.
2. All courses with prefixes BB, CH, PH, or GE count toward this requirement. Must include at least 1/3 Unit each of BB, CH, and PH.
3. Courses with prefixes BME, CE, CHE, CS, ECE, ES, ME, and RBE are eligible to count toward this requirement. These courses should be thematically related; students must gain approval of their program of study in this area from the Liberal Arts and Engineering Program Committee.
4. Must include either CS 1101 or CS 1102.
5. Must include at least one course in engineering design (such as ECE 2799 or ME 2300), plus at least two other courses with a significant laboratory component (a list of such courses will be maintained by the Liberal Arts and Engineering Program Committee).
6. Must include 2 Units of Humanities and Arts and Social Science. Courses with prefixes AR, HI, MU, PY, RH, WR, IMGD, ECON, GOV, PSY, STS, and SD may be eligible to count toward this requirement. Courses must be selected from areas that strongly complement the practice of engineering, such as the history of technology, ethics, writing and visual rhetoric, economics, society-technology studies, and environmental studies. A list of such courses will be maintained by the Liberal Arts and Engineering Program Committee.
7. May include up to 1 Unit of Management. All courses with prefixes ACC, BUS, ETR, FIN, MIS, MKT, OIE, and OBC are eligible to count toward this requirement.
8. The MQP provides a capstone experience that builds on both the technical (Engineering Science and Design) and nontechnical (Humanities and Arts, Social Science, and Management Topics) components of the student's particular program. At least one advisor to the MQP must be a member of the Liberal Arts and Engineering Associated Faculty.

PROGRAMS OF STUDY AND RELEVANT COURSES

The Liberal Arts and Engineering program will offer considerable curricular flexibility to accommodate a wide range of student interests, but at the same time will require students to be intentional about developing a coherent program of study consistent with the program's objectives. Academic advising will play an important role in helping students plan their programs.

For more information and advice about the program, contact Prof. Lance Schachterle at les@wpi.edu.

The Engineering Science and Design component of the major (Distribution Requirement 2) must be approved by the Liberal Arts and Engineering Program Committee to ensure that it provides students with a focus in some area of engineering. Guidance and examples will be provided so that students know in advance what types of programs will be approved. The intent is to accommodate creative programs while avoiding programs that lack a coherent theme.

The Social and Humanistic Factors component (see Distribution Requirement 3 and Note 6) should consist of courses that complement engineering and technology to support the educational objectives of the program. The Program Committee will maintain and make available to students and advisors lists of current courses that are acceptable for credit toward this requirement.

POST-DOCTORAL SCHOLARS: M. Berezovski, J. Gagnon, S. Jimenez, F. Lopez Garcia, L. Su, X. Zhang

MISSION STATEMENT

Recognizing the vital role that mathematical sciences play in today's society, the Mathematical Sciences Department provides leading-edge programs in education, research, and professional training in applied and computational mathematics and statistics. These programs are enhanced and distinguished by project-oriented education and collaborative involvement with industry, national research centers, and the international academic community.

PROGRAM EDUCATIONAL OBJECTIVES

The department's major programs provide students with preparation for effective and successful professional careers in the mathematical sciences, whether in traditional academic pursuits or in the many new career areas available in today's technologically sophisticated, globally interdependent society. Through course work, students acquire a firm grounding in fundamental mathematics and selected areas of emphasis. Projects, which often involve interdisciplinary and industrial applications, offer further opportunities to gain mathematical depth and to develop skills in problem-solving, communication, teamwork, and self-directed learning, together with an understanding of the role of the mathematical sciences in the contemporary world.

PROGRAM OUTCOMES

We expect graduates to:

1. have a solid knowledge of a broad range of mathematical principles and techniques and the ability to apply them.
2. be able to read, write, and communicate mathematics inside and outside the discipline.
3. have the ability to formulate mathematical statements and prove or disprove them.
4. be able to formulate and investigate mathematical questions and conjectures.
5. understand fundamental axiom systems and essential definitions and theorems.
6. be able to formulate and analyze mathematical or statistical models.

7. have the ability to apply appropriate computational technology to analyze and solve mathematical problems.
8. be able to learn independently and as part of a team, and to demonstrate a depth of knowledge in at least one area of the mathematical sciences.

The Department of Mathematical Sciences at WPI offers:

- i) the Bachelor of Science degree in Mathematical Sciences;
- ii) the Bachelor of Science degree in Actuarial Mathematics;
- iii) a Minor in Mathematics;
- iv) a Minor in Statistics;
- v) a combined B.S./M.S. degree in Applied Mathematics, Applied Statistics, Industrial Mathematics, or Financial Mathematics.

Program Distribution Requirements for the Mathematical Sciences Major

The normal period of residency at WPI is 16 terms. In addition to the WPI requirements applicable to all students, completion of a minimum of 10 units of study is required as follows:

REQUIREMENTS	MINIMUM UNITS
1. Mathematics including MQP (See notes 1-4).	7
2. Courses from other departments that are related to the student's mathematical program. At least 2/3 units of science must be included. At least 2/3 unit in computer science must be included; the remaining courses are to be selected from science, engineering, computer science or management (except FIN 1250) (see Note 5).	2
3. Additional courses or independent studies (except MS, PE courses, and other degree requirements) from any area.	1

NOTES:

1. Must include MA 3831-3832, or their equivalents, at least one of MA 3257, MA 3457, or equivalent, and at least one of MA 3823, MA 3825, or equivalent.
2. Must include at least three of the following: MA 2073, MA 2271, MA 2273, MA 2431, MA 2631, or their equivalents.
3. At least 7/3 units must consist of MA courses at the 3000 level or above.
4. May not include both MA 2631 and MA 2621.
5. Science courses may be chosen from the following disciplines: BB, CH, ES, GE, PH. CS courses may not include both CS 3043 and CS 2022.

PROGRAM IN MATHEMATICAL SCIENCES

PROJECTS

Some of the most active career directions in the mathematical sciences are reflected in the MQP areas around which the department's offerings are organized: Algebraic and Discrete Mathematics, Computational and Applied Analysis, Operations Research, and Probability and Statistics. As early as practical, and certainly no later than the sophomore year, the mathematical sciences major should begin exploring these different areas. The transition courses, MA 2073, 2271, 2273, 2431, and 2631, are specifically designed to introduce the four MQP areas while preparing the student for advanced courses and the MQP. The student should talk to faculty in the student's area of interest to develop and select an MQP and MQP advisor.

While most students choose MQPs in one of the four areas mentioned above, it is possible to design an MQP that does not fit into any one area. In such cases, students will want to take special care to plan their programs carefully with their advisors so that sufficient background is obtained before beginning to do research. Independent studies are a good way for students to learn topics that are not taught in regularly-scheduled courses. Interested students should approach faculty with requests for independent studies.

Through the Center for Industrial Mathematics and Statistics (CIMS), students can use their mathematics and statistics training to work on real-world problems that come from sponsors in industry and finance. More information about industrial MQPs and projects can be found at <http://www.wpi.edu/+CIMS>.

The following sections contain, for each MQP area:

- A brief description of the area including the kinds of challenges likely to be encountered by MQP students and mathematical scientists working there.
- Courses of interest.

ALGEBRAIC AND DISCRETE MATHEMATICS

Algebraic and discrete mathematics is recognized as an increasingly important and vital area of mathematics. Many of the fundamental ideas of discrete mathematics play an important role in formulating and solving problems in a variety of fields ranging from ecology to computer science. For instance, graph theory has been used to study competition of species in ecosystems, to schedule traffic lights at an intersection, and to synchronize parallel processors in a computer. Coding theory has been applied to problems from the private and public sectors where encoding and decoding information securely is the goal. In turn, the problems to which discrete mathematics is applied often yield new and interesting mathematical questions. The goal of a project in discrete mathematics would be to experience this interaction between theory and application. To begin, a typical project team would assess the current state of a problem and the theory that is relevant. Once this is done, the project team's objective would be to make a contribution to solving the problem by developing new mathematical results.

In working in discrete mathematics, one may be writing algorithms, using the computer as a modeling tool, and using the computer to test conjectures. It is important that a student interested in this area have some computer proficiency. Depending on the project, an understanding of algorithm analysis and computational complexity may be helpful.

Courses of Interest

MA 2271	Graph Theory
MA 2273	Combinatorics
MA 3231	Linear Programming
MA 3233	Discrete Optimization
MA 3823	Group Theory
MA 3825	Rings and Fields
MA 4891	Topics in Mathematics (when appropriate)
CS 2301	Systems Programming for Non-Majors
CS 4120	Analysis of Algorithms
CS 4123	Theory of Computation

COMPUTATIONAL AND APPLIED ANALYSIS

This area of mathematics concerns the modeling and analysis of continuous physical or biological processes that occur frequently in science and engineering. Students interested in this area should have a solid background in analysis which includes the ability to analyze ordinary and partial differential equations through both analytical and computational means.

In most circumstances, an applied mathematician does not work alone but is part of a team consisting of scientists and engineers. The mathematician's responsibility is to formulate a mathematical model from the problem, analyze the model, and then interpret the results in light of the experimental evidence. It is, therefore, important for students to have some experience in mathematical modeling and secure a background in one branch of science or engineering through a carefully planned sequence of courses outside of the department.

With the increase in computational power, many models previously too complicated to be solvable, can now be solved numerically. It is, therefore, recommended that students acquire enough computer proficiency to take advantage of this. Computational skill is growing in importance and should be a part of every applied mathematician's training. Students may learn these skills through various numerical analysis courses offered by the department. An MQP in this area will generally involve the modeling of a real-life problem, analyzing it, and solving it numerically.

Courses of Interest

MA 2251	Vector and Tensor Calculus
MA 2431	Mathematical Modeling with Ordinary Differential Equations
MA 3231	Linear Programming
MA 3257	Numerical Methods for Linear and Nonlinear Systems
MA 3457	Numerical Methods for Calculus and Differential Equations
MA 3471	Advanced Ordinary Differential Equations
MA 3475	Calculus of Variations
MA 4235	Mathematical Optimization
MA 4291	Applicable Complex Variables
MA 4411	Numerical Analysis of Differential Equations
MA 4451	Boundary Value Problems
MA 4473	Partial Differential Equations

OPERATIONS RESEARCH

Operations research is an area of mathematics which seeks to solve complex problems that arise in conducting and coordinating the operations of modern industry and government. Typically, operations research looks for the best or optimal solutions to a given problem. Problems within the scope of operations research methods are as diverse as finding the lowest cost school bus routing that still satisfies racial guidelines, deciding whether to build a small plant or a large plant when demand is uncertain, or determining how best to allocate timesharing access in a computer network.

Typically, these problems are solved by creating and then analyzing a mathematical model to determine an optimal strategy for the organization to follow. Often the problem requires a statistical model, and nearly always the analysis - whether optimizing through a set of equations or simulating the behavior of a process - involves the use of a computer. Finally, operations researchers must be able to interpret and apply the results of their analyses in an appropriate manner.

In addition to a solid background in calculus, probability and statistics, and the various operations research areas, prospective operations researchers should be familiar with computer programming and managerial techniques.

Courses of Interest

BUS 2080	Data Analysis for Decision Making
MA 2271	Graph Theory
MA 2273	Combinatorics
MA 3231	Linear Programming
MA 3233	Discrete Optimization
MA 3627	Applied Statistics III

MA 4631	Probability and Mathematical Statistics I
MA 4632	Probability and Mathematical Statistics II
OIE 3460	Simulation Modeling and Analysis
OIE 3510	Stochastic Models

PROBABILITY AND STATISTICS

In many areas of endeavor, decisions must be made using information which is known only partially or has a degree of uncertainty attached to it. One of the major tasks of the statistician is to provide effective strategies for obtaining the relevant information and for making decisions based on it. Probabilists and statisticians are also deeply involved in stochastic modeling - the development and application of mathematical models of random phenomena. Applications to such areas as medicine, engineering, and finance abound.

Students interested in becoming probabilists or mathematical statisticians should consider additional study in graduate school. While graduate study is an option for students whose goals are to be applied statisticians, there are also career opportunities in business, industry, and government for holders of a Bachelor's degree. More information about careers in statistics can be found at the American Statistical Association's web site <http://www.amstat.org/careers>.

MA 4632	Probability and Mathematical Statistics II

PROGRAM IN ACTUARIAL MATHEMATICS

Actuaries provide financial evaluations of risk that help professionals in the insurance and finance industries, and many in large corporations and government agencies make strategic management decisions. Fellowship in the Society of Actuaries or the Casualty Actuarial Society – achieved by passing a series of examinations – is the most widely accepted standard of professional qualification to practice as an actuary.

WPI's program enables students to take the first steps toward preparing for these exams and introduces these majors to the fundamentals of business and economics.

PROJECTS

Off-campus qualifying projects are regularly done in collaboration with insurance companies, and have in the past been sponsored by Aetna, Allmerica Financial, Blue Cross Blue Shield of Massachusetts, John Hancock Mutual Insurance, Premier Insurance, and Travelers Property Casualty. Visit <http://www.wpi.edu/+CIMS>. These projects give real-world experience of the actuarial field by having students involved in solving problems faced by professional actuaries. Instead of choosing a project already posed by a company/advisor team, students may instead seek out industry-sponsored projects on their own (often through internship connections) and propose them to a potential faculty advisor. Alternatively, students may choose to complete any other project in mathematics.

Program Distribution Requirements for the Actuarial Mathematics Major

The normal period of residency at WPI is 16 terms. In addition to the WPI requirements applicable to all students, completion of a minimum of 10 units of study is required as follows:

REQUIREMENTS	MINIMUM UNITS
1. Mathematics (including MQP) (See notes 1-5)	7
2. Basic Science (See note 6)	2/3
3. Computer Science	2/3
4. Business (See note 7)	4/3
5. Additional courses or independent studies (except AS, MS, PE courses, and other degree requirements) from any area	1/3

NOTES:

1. Must include MA 3831 and MA 3832, or their equivalents, at least one of MA 3257, MA 3457, or equivalent, and at least one of MA 3631, MA 4632, or equivalent.
2. Must include two of the following: MA 2073, MA 2271, MA 2273, MA 2431, MA 2631, or their equivalents
3. Must include three of the following: MA 3211, MA 3212, MA 4213, MA 4214, or their equivalents
4. May include independent studies directed towards Society of Actuaries exams only if the material was not previously covered in a WPI course
5. May not include both MA 2631 and MA 2621
6. Basic science courses must be chosen from the following disciplines: BB, CH, ES, GE, or PH
7. Must include exactly one of BUS 2060 or ACC 2101, and exactly one of BUS 2070 or FIN 2200, or their equivalents.

Students interested in pursuing a degree in Actuarial Mathematics should contact Professor Abraham, the Coordinator of the Actuarial Mathematics Program, as soon as possible.

STATISTICS MINOR

Statistical methods are widely used in science, engineering, business, and industry. The Statistics Minor is appropriate for all WPI students with interests in experimental design, data analysis, or statistical modeling. The minor is designed to enable a student to properly design studies and analyze the resulting data, and to evaluate statistical methods used in their field of study. Students should discuss course selections for the minor in advance with a statistics faculty member, who serves as the Minor Advisor. The student must complete the Statistics Minor Program Planning and Approval Form, and have it signed by the Minor Advisor. Students are encouraged to do this as early as possible, but it must be done prior to starting the Capstone. The statistics minor consists of completion of at least 2 units of work, which must consist of:

1. At least 5/3 units of coursework, which must be drawn from the following lists of Foundation and Upper-Level Courses, and which must include successful completion of at least 2/3 units from each list:

Courses for Statistics Minor (5/3 Unit Required)

Foundation Courses (2/3 Unit Required)

MA 2073	Matrices and Linear Algebra II
MA 2611	Applied Statistics I
MA 2612	Applied Statistics II
MA 2631	Probability, or
MA 2621	Probability for Applications

Upper-Level Courses (2/3 Unit Required)

MA 3627	Applied Statistics III
MA 3631	Mathematical Statistics
MA 4213	Risk Theory
MA 4214	Survival Models
MA 4237	Probabilistic Methods in Operations Research
MA 4631	Probability and Mathematical Statistics I
MA 4632	Probability and Mathematical Statistics II
Any statistics graduate course: MA 509 or any course numbered MA 540 through MA 559	

2. The final 1/3 unit Capstone Experience: The capstone experience may be satisfied by certain 3000-level, 4000-level or graduate courses offered by the department or by a suitable independent study with one of the department's statistics faculty. The Capstone must be approved in advance by having the Capstone instructor sign the Statistics Minor Program Approval Form. After completion of the Capstone Experience, the Statistics Minor Program Planning and Approval Form is submitted to the Mathematical Sciences Program Review Chair for final approval.

For information about the Statistics Minor, see any of the statistics faculty: Professors Joseph D. Petrucci, Balgobin Nandram, or Zheyang Wu.

MATHEMATICS MINOR

The Minor in Mathematics consists of successful completion of at least 2 units of academic activities in mathematical sciences.

Students should discuss course selections for the minor in advance with a member of the mathematical sciences faculty who will serve as the Minor Advisor. The student must complete the Mathematics Minor Program Planning and Approval Form and have it signed by the Minor Advisor. Students are encouraged to do this as early as possible, but it must be done prior to starting the Capstone. The following requirements must be satisfied.

- At least 5/3 units must be coursework in the Mathematical Sciences Department at the 2000 level or above, of which at least 2/3 units must be upper-level courses, i.e. 3000-level, 4000-level, or graduate mathematics courses. Courses selected at the 2000 level, if any, must include at least one of the following courses:
 - MA 2073 Matrices and Linear Algebra II
 - MA 2251 Vector and Tensor Calculus
 - MA 2271 Graph Theory
 - MA 2273 Combinatorics
 - MA 2431 Mathematical Modeling with Ordinary Differential Equations
 - MA 2631 Probability
- The final 1/3 unit Capstone Experience: The experience may be satisfied by certain 3000-level, 4000-level or graduate courses offered by the department or by a suitable independent study with a Mathematical Sciences faculty member. The Capstone must be approved in advance by having the Capstone instructor sign the Mathematics Minor Planning and Approval Form. After completion of the Capstone Experience, the Mathematics Minor Program Planning and Approval Form is submitted to the Mathematical Sciences Program Review Chair for final approval.

Here are some examples of 5/3 units of coursework for five thematically-related minors. Other options are available.

Applied Analysis	Computational Analysis	Differential Equations	Discrete Mathematics	Operations Research
MA 2051	MA 2051	MA 2051	MA 2201	MA 2071
MA 2071	MA 2071	MA 2251	MA 2271	MA 2073
MA 2431	MA 2073	MA 3471	MA 2273	MA 3231
MA 3831	MA 3257	MA 4411	MA 3233	MA 3233
MA 3832	MA 3457	MA 4473	MA 533	MA 4235 or MA 4237

For more information about the Mathematics minor, see Professor Farr, who is the coordinator for Mathematics minors.

ASSOCIATE PROFESSORS: H. K. Ault, J. Blandino, C. Demetry, M. Fofana, C. Furlong, D. Lados, J. Liang, D. J. Olinger, M. W. Richman

ASSISTANT PROFESSORS: S. Evans, G. Fischer, S. Nestinger, Y. Wang

TEACHING PROFESSOR: J. Hall

EMERITUS PROFESSORS: R. Biederman, J. M. Boyd, H. T. Grandin, J. A. Mayer, Jr., R. L. Norton

MISSION STATEMENT

The Mechanical Engineering program at WPI aims to graduate students who have the broad expertise required to confront real world technological issues that arise in our society. Students in the program are educated to apply scientific principles and engineering methods to analyze and design systems, processes, and products that, when engineered properly, improve the quality of our lives. The Mechanical Engineering program is consistent with the WPI philosophy of education, in which each student develops the tools required for self-learning, and the sensibility to consider the impact of technology on society in the decisions they will make as engineering professionals.

PROGRAM EDUCATIONAL OBJECTIVES

The Mechanical Engineering Program seeks to have alumni who:

- are successful professionals because of their mastery of the fundamental engineering sciences, and mechanical engineering and their understanding of the design process.
- are leaders in business and society due to a broad preparation in technology, communication, teamwork, globalization, ethics, business acumen and entrepreneurship.
- will use their understanding of the impact of technology on society for the betterment of humankind.

PROGRAM OUTCOMES

Graduating students should demonstrate that they attained the following:

- an ability to apply knowledge of mathematics, science, and engineering
- an ability to design and conduct experiments, as well as to analyze and interpret data
- an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- an ability to function on multi-disciplinary teams
- an ability to identify, formulate, and solve engineering problems
- an understanding of professional and ethical responsibility
- an ability to communicate effectively

- the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
- a recognition of the need for, and an ability to engage in life-long learning
- a knowledge of contemporary issues
- an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice
- an ability to apply principles of engineering, basic science, and mathematics (including multivariate calculus and differential equations) to model, analyze, design, and realize physical systems, components or processes
- an ability to work professionally in both thermal and mechanical systems areas

Program Distribution Requirements for the Mechanical Engineering Major

The normal period of residency at WPI is 16 terms. In addition to WPI requirements applicable to all students (see page 7), students wishing to receive the ABET-accredited degree designated “Mechanical Engineering” must satisfy certain additional distribution requirements. These requirements apply to 10 units of study in the areas of mathematics, basic science, and engineering science and design as follows:

REQUIREMENTS	MINIMUM UNITS
1. Mathematics and Basic Science (Notes 1, 2, 3).	4
2. Engineering Science and Design (includes MQP) (Notes 3, 4, 5, 6, 7, 8, 9).	6

NOTES:

1. Must include a minimum of 5/3 units of mathematics, including differential and integral calculus and differential equations.
2. Must include a minimum of 1/3 unit in chemistry and 2/3 unit in physics, or 1/3 unit in physics and 2/3 unit in chemistry.
3. Must include an activity that involves basic matrix algebra and the solution of systems of linear equations, and an activity that involves data analysis and applied statistical methods.
4. Must include 1/3 unit in each of the following: electrical engineering, materials science, and mechanical engineering experimentation.
5. Must include at least one unit of ME courses at the 4000-level or higher.
6. May include 1000 level courses only if designated ES or ME.
7. Must include two stems of coherent course and/or project offerings as noted below in a and b.
 - a. A minimum of one unit of work in thermofluid systems that includes the topics of thermodynamics, fluid mechanics and heat transfer, plus an activity that integrates thermofluid design.
 - b. A minimum of one unit of work in mechanical systems that includes the topics of statics, dynamics, and stress analysis, plus an activity that integrates mechanical design.
8. Must include an activity which realizes (constructs) a device or system.
9. Must include 1/3 unit of Capstone Design Experience.

Items 3, 5, 7a integration, 7b integration, 8, 9 may all be “multiple-counted.”

Each Mechanical Engineering student must complete a Capstone Design experience requirement. This capstone design experience is partially or fully accomplished by completing a Major Qualifying Project which integrates the past course work

and involves significant engineering design. At the time of registration for the MQP, the project advisor will determine whether the MQP will meet the Capstone Design requirement or not. If not, the advisor will identify an additional 1/3 unit of course work in the area of design (ME 4320, ME 4429, ME 4770, ME 4771, or ME 4810) to be taken in order to meet the ABET Capstone Design requirement.

MECHANICAL ENGINEERING DEPARTMENT CONCENTRATIONS

AERONAUTICS (GATSONIS)

Students are provided with ample opportunity to develop technical competence in low- and high-speed aerodynamics, aircraft propulsion systems, structures, and aircraft design. Experimental and computational facilities are available for course and projects. Typical MQPs include: the design, construction, and testing of remotely piloted aircraft and micro aerial vehicles; experimental and computational aerodynamics; flow and structural control; parachute aerodynamics.

Aeronautics

2 Courses Required

ME/AE 3410	Compressible Fluid Dynamics
ME/AE 3711	Aerodynamics

4 Courses Selected

ME/AE 3712	Aerospace Structures
ME/AE 4710	Gas Turbines for Propulsion and Power Generation
ME/AE 4718	Advanced Materials with Aerospace Applications
ME/AE 4723	Aircraft Dynamics and Controls
ME/AE 4733	Guidance, Navigation and Communication
ME/AE 4770	Aircraft Design

**Plus Aeronautics related MQP*

ASTRONAUTICS (GATSONIS)

Students are provided with ample opportunity to develop technical competence in spacecraft dynamics, rocket propulsion, guidance and controls, space structures, and space systems design. Experimental and computational facilities are available for course and projects. Typical MQPs include: design and testing of recoverable rockets; experiments in electric propulsion and micro-propulsion; experiments in formation flying and spacecraft control.

Astronautics

2 Courses Required

ME/AE 2713	Astronautics
ME/AE 4713	Spacecraft Dynamics and Controls

4 Courses Selected

ME/AE 3410	Compressible Fluid Dynamics
ME/AE 3712	Aerospace Structures
ME/AE 4718	Advanced Materials with Aerospace Applications
ME/AE 4719	Rocket Propulsion
ME/AE 4733	Guidance, Navigation and Communication
ME/AE 4771	Spacecraft and Mission Design

**Plus Astronautics related MQP*

BIOMECHANICAL (HOFFMAN)

Students blend biology and biotechnology coursework with continuum mechanics, biomechanics, biofluids, and biomedical materials to support their individual interest. MQPs are usually developed jointly with off-campus medical facilities, including the University of Massachusetts Medical Center.

Typically MQP topics include: soft tissue mechanics, flow in constricted blood vessels, joint kinematics, prosthetic devices, sports biomechanics, biomaterials, tissue engineering and rehabilitation.

Biomechanical

Two (2) Biology and Biotechnology (BB) Courses
Select 4

ME 3501	Elementary Continuum Mechanics
ME 3506	Rehabilitation Engineering
ME/BME 4504	Biomechanics
ME 4606	Biofluids
ME 4814	Biomaterials
Any BME course at the 3000-level or higher	

* Plus Biomechanical-related MQP

ENGINEERING MECHANICS (HOU)

Students select courses to develop the ability to construct models to analyze, predict, and test the performance of solid structures, fluids, and composite materials under various situations.

Typical MQP topics include: mechanical vibrations, stress and strain analysis, computer methods in engineering mechanics, finite element analysis, and vibration isolation. Departmental testing facilities and computer and software support are available.

Engineering Mechanics

Select 6

ME 3501	Elementary Continuum Mechanics
ME 3506	Rehabilitation Engineering
ME/BME 4504	Biomechanics
ME 4505	Advanced Dynamics
ME 4506	Mechanical Vibrations
ME 4512	Introduction to the Finite Element Method

* Plus Engineering Mechanics MQP

MANUFACTURING (RONG)

Courses are available to support student interest in manufacturing engineering, computer-aided design, computer-aided manufacturing, robotics, vision systems, and a variety of manufacturing processes. Typical MQPs include: robotics, composite materials, factory automation, materials processing, computercontrolled machining, surface metrology, fixturing, machine dynamics, grinding, precision engineering, prototype manufacturing.

See also the Manufacturing Engineering degree program.

Manufacturing

Select 2

ME 1800	Manufacturing Science Prototyping & Computer Controlled Machining
ME 2820	Materials Processing
ME 4810	Automotive Materials and Process Design
ME 4821	Plastics

Select 2

ES 3011	Control Engineering I
ME 3820	Computer-Aided Manufacturing
ME/RBE 4815	Industrial Robotics

Select 2

BUS 3020	Achieving Effective Operations
OIE 2850	Engineering Economics
OIE 3410	Materials Management in Supply Chains

* Plus Manufacturing MQP

MATERIALS SCIENCE AND ENGINEERING (SISSON)

Students interested in a strong materials science and engineering component can elect course and project activities in metals, ceramics, polymers, and composite materials with laboratory and project experience using facilities in Stoddard Laboratories.

Typical MQP topics include: X-ray diffraction, electron microscopy, computer modeling, mechanical testing and deformation mapping, plastic deformation, ceramic processing, friction, wear, corrosion, and materials processing.

Another option in the materials program is a Minor in Materials, which is described under Materials Engineering in this catalog.

Materials Science and Engineering

Select 6

ME 2820	Materials Processing
ME 4718	Advanced Materials with Aerospace Applications
ME 4810	Automotive Materials and Process Design
ME 4813	Ceramics and Glasses for Engineering
ME 4814	Biomaterials
ME 4821	Plastics
ME 4832	Corrosion and Corrosion Control
ME 4840	Physical Metallurgy
ME 4860	Food Engineering
ME 4875	Introduction to Nanomaterials and Nanotechnology
Any 500-level MTE course	

* Plus Materials Science MQP

MECHANICAL DESIGN (HOFFMAN)

Courses are available to support development of student interest in the design, analysis, and optimization of an assembly of components which produce a machine. Computer-based techniques are widely used in support of these activities.

Typical MQP topics are: optimum design of mechanical elements, stress analysis of machine components, evaluation and design of industrial machine components and systems, robotics, and computer-aided design and synthesis.

Mechanical Design

2 Required

ME 3310	Kinematics of Mechanisms
ME 3320	Design of Machine Elements

Select 4

ES 1310	Engineering Design Graphics
ES 3323	Introduction to CAD
ME 2300	Introduction to Engineering Design
ME 3311	Dynamics of Mechanisms and Machines
ME 3506	Rehabilitation Engineering
ME 4320	Advanced Engineering Design
ME/RBE 4322	Modeling and Analysis of Mechatronic Systems
ME 4810	Automotive Materials and Process Design
ME/RBE 4815	Industrial Robotics

* Plus Mechanical Design MQP

ROBOTICS (FISCHER)

Students select courses to give them a solid foundation in the various aspects of robotics, including kinematics and actuators, sensors, and control and computing. In addition to relevant mechanical engineering courses, students can select courses from electrical engineering and computer science.

MECHANICAL ENGINEERING PROGRAM CHART

STUDENTS EARNING A B.S. DEGREE IN MECHANICAL ENGINEERING MUST COMPLETE 15 UNITS OF STUDY, DISTRIBUTED AS FOLLOWS:

4 UNITS OF NON-TECHNICAL ACTIVITIES

2 UNITS HUMANITIES AND ARTS	<i>See WPI Requirements</i>
1 UNIT INTERACTIVE QUALIFYING (IQP) PROJECT	<i>See WPI Requirements</i>
2/3 UNIT SOCIAL SCIENCE	<i>See WPI Requirements</i>
1/3 UNIT PHYSICAL EDUCATION	<i>See WPI Requirements</i>

1 UNIT FREE ELECTIVE

1 UNIT FREE ELECTIVE	<i>See Catalog</i>
-----------------------------	--------------------

4 UNITS OF MATHEMATICS (MA) AND BASIC SCIENCE (BB, CH, GE 2341, PH)

5/3 Units
Differential & Integral Calculus and
Ordinary Differential Equations

MATHEMATICS	
MA 1021	MA 1023
MA 1022	MA 1024
MA 2051	

4/3 Units
Student Selected Courses from
the General Category of Mathematics
and/or Basic Science

3/3 Units
One Chemistry and Two Physics, OR
One Physics and Two Chemistry

SCIENCE	
CH 1010	CH 1020
PH 1110	PH 1120

6 UNITS OF MECHANICAL ENGINEERING (Notes 1 & 2)

1 unit required	1 unit required	1 unit required	1 unit required	2 units required
MECHANICAL SYSTEMS	THERMAL SYSTEMS	OTHER COURSES	MAJOR QUALIFYING PROJECT (MQP)	ELECTIVES
ES 2501 ES 2502 ES 2503	ES 3001 ³ ES 3004 ES 3003	ES 2001 ECE 2010 ⁴ ME 3901		At least one unit must be chosen in ME courses at the 4000-level or higher, or FPE 520, 521, 553.

Note 1: A complete program must include an activity in each of the following six categories. Courses used to satisfy these activities can be "multiple-counted". They can be used to simultaneously satisfy the mechanical engineering, mathematics and basic science, and free elective requirements.

OTHER ACTIVITIES					
Linear Algebra	Statistics	Mechanical System Design	Thermal System Design	Realization	Capstone Design
MA 2071 ME 3501 MA 2073 ME4505 MA 4411 ME 4512 ME 3311 ME 3321	MA 2611 MA 2612 MA 2621 ME 3901	ME 3310 ME 4320 ME 3311 ME 4430 ME 3320 ME 4770 ME 3506 ME 4816 MQP (depending on topic)	ME 4429 ME 4430 ME 4770 MQP (depending on topic)	ES 3323 ME 1800 ME 2300 ME 3506 MQP (depending on topic)	ME 4320 ME 4429 ME 4770 ME 4771 ME 4810 MQP (depending on topic)

Note 2: Elective courses from other engineering disciplines may also be selected at the 2000, 3000 or 4000 levels.

Note 3: ES 3001 may be replaced by CH 3510 or PH Thermodynamics. If CH or PH is used to cover thermodynamics, this course counts as a science; another engineering elective is then required.

Note 4: ECE 2010 or any ECE course other than ECE 1799.

Typical MQP topics include designing of robots and robotic components, including mobile ground robots, aerial robots and underwater robots, automatic assembly and industrial robotics applications, and development of software and control algorithms for individual robots and robotic swarms.

Robotics

3 Required

RBE 2001	Unified Robotics I
ES 3011	Control Engineering I or ME 3310 Kinematics of Mechanisms
ME/RBE 4322	Modeling and Analysis of Mechatronic Systems or ME/RBE 4815 Industrial Robotics

Select 3

CS 2102	Object-Oriented Design Concepts
CS 2301	Systems Programming for Non-Majors or CS 2303 Systems Programming Concepts
CS 3733	Software Engineering
CS 4341	Introduction to Artificial Intelligence
ECE 2049	Embedded Computing in Engineering Design
ECE 2311	Continuous-Time Signal and System Analysis
ECE 2312	Discrete-Time Signal and System Analysis
ECE 4703	Real Time Digital Signal Processing
ES 3011	Control Engineering I (If not selected above)
ES 3323	Advanced Computer-aided Design
ME 3310	Kinematics of Mechanisms (If not selected above)
ME/RBE 4815	Industrial Robotics (If not selected above)
RBE 2002	Unified Robotics II
RBE 3001	Unified Robotics III
RBE 3002	Unified Robotics IV

*Plus Robotics MQP

*Others courses with approval from the ME Undergraduate Committee.

THERMAL-FLUID ENGINEERING (YAGOABI)

Students study the theoretical and empirical bases of thermodynamics, heat transfer, mass transfer, and fluid flow, as well as the application of these fundamental engineering sciences to energy conversion, environmental control, and vehicular systems.

Typical MQPs include: biological fluid mechanics, laminar/turbulent separation, lifting bodies, heat pipes, electronic component cooling, power cycles, fluid component analysis and design, and energy storage.

Thermal-Fluid Engineering

3 Required

ME/AE 3410	Compressible Fluid Dynamics
ME/AE 3602	Incompressible Fluid Dynamics
ME 4429	Thermodynamic Applications
ME/AE 4710	Gas Turbines for Propulsion and Power Generation

Select 3

ES 3002	Mass Transfer
ME 3501	Continuum Mechanics
ME/AE 3711	Aerodynamics
ME 4429	Thermodynamic Applications
ME 4430	Integrated Thermochemical Design and Analysis
ME/BME 4606	Biofluids
ME/AE 4710	Gas Turbines for Propulsion and Power Generation
ME/AE 4719	Rocket Propulsion

* Plus Thermal-Fluids related MQP

NOTES:

1. A Concentration area requires a 1 unit of MQP in that area.
2. After consultation with their academic advisor, students may petition the M.E. Dept. Curriculum Committee for approval of a Concentration plan at any time, preferably prior to the middle of their Junior Year.

ENHANCED PROGRAMS

BACHELOR/MASTER'S PROGRAM IN MECHANICAL ENGINEERING

Outstanding students are encouraged to combine a master's degree with their undergraduate WPI studies. Details are found in the WPI GRADUATE PROGRAM section of this catalog, and interested students should initiate discussions with their advisor early in their junior year.

COOPERATIVE EDUCATION PROGRAM

The WPI Cooperative Education Program provides an opportunity to integrate "real-world" experience into an educational program. Details are found in the COOPERATIVE EDUCATION PROGRAM section on page 199.

MECHANICAL ENGINEERING MINOR (FOR NON-MAJORS)

Non- ME majors interested in developing a ME minor in conjunction with their major should consult with the Department Head or the lead faculty member in the specific ME sub-area of interest to define a program leading to recognition of the minor. Each individual student minor must then be approved by the Committee on Academic Operations.

MANUFACTURING ENGINEERING MINOR

A minor in Manufacturing Engineering gives students from a variety of majors the opportunity to strengthen their academic preparation and attractiveness to industry, while better preparing them to solve many of the problems that will challenge them in their careers. Most engineers are involved directly or indirectly with manufacturing or manufacturing principles. Manufacturing expertise is essential to all industrialized, developing and even post industrialized societies. The objective of the minor in manufacturing will be to give the students a solid understanding of the principles of production, processing, manufacturability, and quality that can be applied to a wide variety of products, including non-traditional products, such as software, service and information.

The minor requires the completion of 2 units of work as follows.

- 1 unit of required course work selected from the following list:

ME 1800	Manufacturing Science Prototyping & Computer Controlled Machining
ME 2820	Materials Processing
ME 3820	Computer-Aided Manufacturing
ES 3011	Control Engineering I
- 2/3 unit of electives, selected from the following list of courses:

_____	any of the courses above, in I., can count if the other three are completed.
BUS 3020	Achieving Effective Operations
CS 4032/MA 3257	Numerical Methods for Linear and Nonlinear Systems
CS 4341	Introduction to Artificial Intelligence
ES 3323	Advanced Computer Aided Design
ME 3310	Kinematics of Mechanisms
ME/RBE 4815	Industrial Robotics
ME 4821	Plastics

OIE 3420	Quality Planning, Design and Control
MFE 510	Control and Monitoring of Manufacturing Processes
MFE 511	Application of Industrial Robotics
MFE 520	Design and Analysis of Manufacturing Processes
MFE 530	Computer Integrated Manufacturing
MFE 540	Design for Manufacturability

III. 1/3 unit of capstone experience:

RBE/ME 4815	Industrial Robotics
MFE 598	Independent Study Project (this must be approved by the MFE minor program committee)
MFE 510	Control and Monitoring of Manufacturing Processes
MFE 511	Application of Industrial Robotics
MFE 520	Design and Analysis of Manufacturing processes
MFE 530	Computer Integrated Manufacturing
MFE 540	Design for Manufacturability

MATERIALS ENGINEERING

Courses and programs of study in materials engineering are included in the Mechanical Engineering Department (page 95). For advisory information, consult that section of the Undergraduate Catalog or members of the materials section of Mechanical Engineering.

MINOR IN MATERIALS

Material properties, material processing issues, or material costs are the limiting factor in the design or performance of almost all systems around us. Engineers, scientists, and managers in all technological sectors often must make material selection decisions based on a variety of considerations, including properties, performance, environmental impact, and cost. A Minor in Materials, feasible within a 15 unit program of study, will benefit students who wish to enhance their disciplinary major with an additional degree designation in the area of materials.

REQUIREMENTS FOR THE MATERIALS MINOR:

The minor requires the completion of 2 units of work as described below:

- ES 2001 Introduction to Material Science (1/3 unit)
- 1-1/3 units of electives, selected from the following list of courses^{b,c}:

CE 3026	Materials of Construction
CH 3410	Principles of Inorganic Chemistry
CH 2310	Organic Chemistry I
CH 2320	Organic Chemistry II
CH 2330	Organic Chemistry III
CH 4330	Organic Synthesis
CHE 3601	Chemical Materials Engineering
ECE 4904	Semiconductor Devices
ME 2820	Materials Processing
ME/AE 4718	Advanced Materials with Aerospace Applications
ME 4810	Automotive Materials and Process Design
ME 4813	Ceramics and Glasses for Engineering Applications
ME/BME 4814	Biomaterials
ME 4821	Plastics
ME 4832	Corrosion and Corrosion Control
ME 4840	Physical Metallurgy
ME 4860	Food Engineering

ME 4875	Introduction to Nanomaterials and Nanotechnology
PH 2510	Atomic Force Microscopy
PH 3502	Solid State Physics

Students who are able to design their undergraduate program of study such that they have sufficient preparation may also use the following graduate courses toward a Materials Minor: all MTE graduate courses; CHE 508, Catalysis and Surface Science of Materials; CHE 510, Particulate Systems.

3. Capstone Experience (1/3 unit)

The capstone experience requirement for the Minor in Materials must be satisfied by an upper level course or IS/P activity that integrates and synthesizes material processing, structure, and property relationships as they affect performance.

- Courses that satisfy the capstone experience requirement currently include ME 4810, ME 4813, ME 4814, and ME 4821. Other courses must be approved in advance by the Program Committee for the Minor in Materials.
- Students may satisfy the capstone experience requirement by completing a 1/3 unit IS/P that receives prior approval from the Program Committee for the Minor in Materials. The IS/P may, for example, take the form of a laboratory experience or may augment the MQP or IQP, considering in depth the materials issues associated with the project topic (see Note d). An IS/P related to the MQP must be distinct from the core 1 unit of the MQP and in most cases would be advised by a faculty member other than the MQP advisor.

NOTES:

- In accordance with the Institute-wide policy on Minors, academic activities used in satisfying the regular degree requirements may be double-counted toward meeting all but one unit of the Minor requirements (see page 11).
- Physics IS/P courses in Superconductors, Photonics, and Lasers may also be counted toward the Materials Minor. In addition, other new or experimental course offerings in the materials area may be approved by the Materials Minor Program Review Committee.
- Examples: An ECE major designing an integrated circuit for her MQP might conduct a separate analysis of the materials issues related to heat management in the device as the capstone experience for the Minor in Materials; a ME major specifying a gear in a design MQP might conduct a separate analysis of the material processing, structure, and property issues affecting fatigue life of the gear.
- In accordance with the Institute-wide policy on Minors, the Major Qualifying Project (MQP) cannot be counted toward activity for a Minor. Therefore, a ME, CHE, or any other major whose MQP is judged to be predominantly in the materials area by the Program Review Committee may not count an extra 1/3 unit augmentation of their MQP as their capstone experience in the Minor.
- The following faculty serve as the Program Review Committee for the Minor in Materials and will serve as Minor Advisors: Richard Sisson (ME), Chrys Demetry (ME), Tahar El-Korchi (CEE).

MILITARY SCIENCE

LTC C. STEFANO, HEAD

PROFESSOR: LTC C. Stefano

MISSION STATEMENT

The Military Science and Leadership Program (Army ROTC) is a premiere leadership and management program offered by WPI. Open to all students within the Worcester Consortium, the program is designed to teach valuable leadership skills and managerial traits that will prepare students for careers in the private and public sectors. Students partake in this hands-on experience that integrates traditional coursework with innovative challenging training. They develop strong decision-making

and organizational management skills, team-building and interpersonal skills, as well as learn time and stress management techniques.

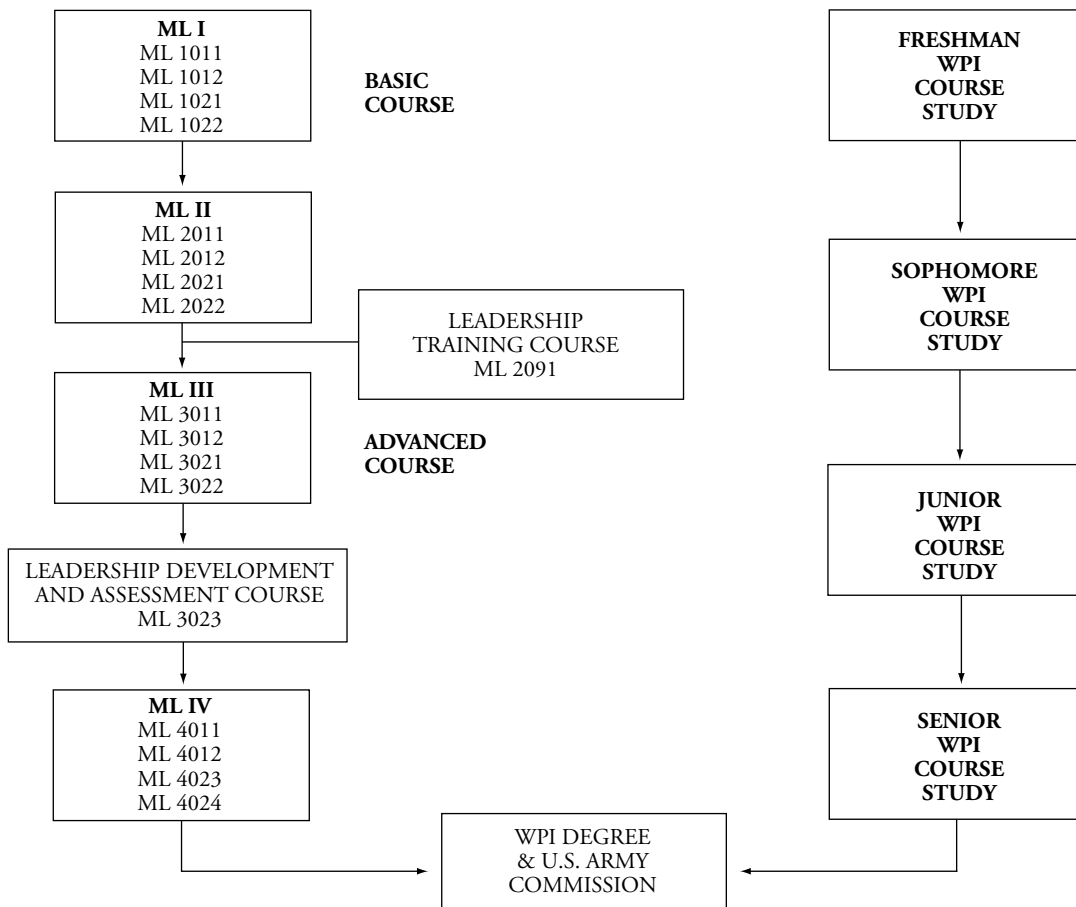

OBJECTIVES AND OUTCOMES

Students that participate in Army ROTC while pursuing their undergraduate and graduate studies are extremely marketable and highly sought after for their distinctive leadership capabilities. As technology transforms organizations, the desire for multi-faceted leaders has increased; the WPI Army ROTC prepares adaptable leaders for the future.

PROGRAM DESCRIPTION(S)

The Military Science and Leadership program is intended to be a four-year program that encourages personal growth and development.

MILITARY SCIENCE COURSE FLOW CHART

- (1) Required for 2 year ROTC program students.
- (2) Additional requirements: Professional Military Education.
Five Undergraduate Courses.
Leadership Laboratories, weekly.
Physical Training, weekly.
Weekend Field Training Exercise (2 each year).
Social Events.
- (3) Required attendance for all Juniors and Seniors.

BASIC COURSE

The first two years make up the Basic Course, which serves as the foundation to the program. During the Basic Course, the curriculum focuses on aspects of leadership, team-building, and communication skills. Students participate in adventure training, such as orienteering, rappelling, and paintball that puts their classroom learning to practice.

Students may participate in the first two years of the program commitment-free. Students awarded full-tuition scholarships or participate in the Advanced Course do incur a service obligation and may serve in the Army either full-time or part-time.

ADVANCED COURSE

The Advanced Course is a more intensive leadership program that is taken during the Junior and Senior years or during two years of graduate studies. The curriculum continues to concentrate on problem-solving and building teams, but also introduces military tactics and ethics.

Students interested in earning a commission as an Army Officer are required to enroll in the Advanced Course and attend the Leadership Development and Assessment Course (LDAC). LDAC is a five-week course that students are paid to attend during the summer and is the culmination of the training that the students receive while on campus. If students decide later in their academic career that they would like to pursue Army ROTC, there are alternate entry options to prepare them for the Advanced Course.

Students attending on Army ROTC Scholarships or that are enrolled in the Advanced Course receive a monthly stipend and \$1,200 per year for books. Freshman receive \$300 per month, Sophomores receive \$350 per month, Juniors receive \$450 per month, and Seniors receive \$500 per month. Students interested in pursuing scholarships or enrolling in the Advanced course are required to meet eligibility requirements.

PHYSICAL EDUCATION, RECREATION, AND ATHLETICS

D. L. HARMON, HEAD

ASSOCIATE PROFESSOR: P. J. Grebinar

INSTRUCTORS: C. Bartley, P. Bennett, C. Boilard, B. Chabot, M. DeSavage, N. Dymont, C. Galasso, P. Hickey, D. Kaiser, A. Krenicki, M. MacPherson, L. Moreau, L. Noble, C. Robertson, R. Southall, J. Steele

REQUIREMENTS

Qualification in physical education shall be established by completing 1/3 unit of course work. Students are urged to complete this requirement in their first two years of residency at WPI. In addition to general PE course offerings, students may satisfy their PE requirement in the PE 1100-series courses noted below:

1. WPI approved varsity athletic team participation. Student must be registered in advance of participation.
2. Club Sports. Students must be members of a PE approved club prior to becoming eligible for physical education credit by meeting established department policies for credit. Students must be registered in advance of participation. Additional fees for some clubs may apply.

3. Approved courses not offered at WPI; advance approval by the Physical Education Department is necessary.

Students who wish to obtain PE credit by the above means must be enrolled in a course in the PE 1100 series.

Participation in certain ROTC programs may entitle students to a receive PE credit.

ATHLETIC PROGRAMS

THE INTERCOLLEGIATE PROGRAM

The intercollegiate athletics program offers competition in 20 varsity sports.

WPI has excellent facilities and provides the best in protective equipment but, if an injury should occur, a team physician and full-time trainers are available, offering the latest treatment methods and facilities.

Practices are normally held daily, after 4 pm. Midweek contests involving travel are held to a minimum to avoid missing classes. Every effort is made to avoid conflicts with academic activities, and competitions are generally scheduled with schools with similar standards and objectives.

In recent years, teams and individuals have been sent to regional and national tournaments to allow them to compete at the highest possible level. All-America recognition has been attained recently in football, men's soccer, track and field, and wrestling.

The athletic program forms an important point of contact with other universities and colleges in the East and is an opportunity for our students to compete against conference and independent institutions.

Varsity Sports

Baseball	Soccer (men)
Basketball (men)	Soccer (women)
Basketball (women)	Softball
Crew (men)	Swimming & Diving (men)
Crew (women)	Swimming & Diving (women)
Cross Country (men)	Track (men) - Indoor/Outdoor
Cross Country (women)	Track (women) - Indoor/Outdoor
Field Hockey	Volleyball (women)
Football	Wrestling

THE CLUB SPORTS PROGRAM

The Club Sports Program offers a variety of competitive activities for student participation. Some of the current Club Sports include:

Club Sports

Alpine Skiing	Martial Arts (SOMA)
Cheerleaders	Rugby
Soccer	Sailing
Fencing	Scuba
Free Style Wrestling	Tennis
Golf	Ultimate Frisbee
Ice Hockey	Volleyball (men)
Lacrosse	Water Polo

Club Sports, Class II, are administered through the Department of Physical Education, Recreation, and Athletics and details regarding the activities listed above are available through the Director of Club Sports in Alumni Gymnasium.

Participating students may incur additional fees for equipment, travel, and/or uniforms.

THE INTRAMURAL PROGRAM

The Intramural Program is designed as an opportunity for students to enjoy the benefits of recreation and athletic competition even though they may not have the time, talent or desire to compete on the higher intercollegiate level.

Entries are welcome not only from fraternities, sororities and other residential units but also from a variety of independent student groups and individuals, including faculty and staff. Approximately 50% of the student body participate in intramurals.

The program includes flag football, floor hockey, racquetball, volleyball, basketball, and soccer. The program is ever-expanding, and activities are added as needs arise and time and facilities permit.

The program is administered by the Department of Physical Education and Athletics, and all details regarding scheduling and eligibility are available on the department website.

ASSISTANT RESEARCH PROFESSOR: M. B. Popovic

MISSION STATEMENT

The Physics Department provides education in physics to both undergraduate and graduate students and contributes to the growth of human knowledge through scholarly work.

PROGRAM EDUCATIONAL OBJECTIVES

The physics department educates students with a program characterized by curricular flexibility, student project work, and active involvement of students in their learning. Through a balanced, integrated curriculum stressing the widely applicable skills and knowledge of physics, we provide an education that is strong both in fundamentals and in applied knowledge, appropriate for immediate use in a variety of fields as well as graduate study and lifelong learning.

PROGRAM OUTCOMES

We expect that physics graduates:

1. Know, understand, and use a broad range of basic physical principles.
2. Have an understanding of appropriate mathematical methods, and an ability to apply them to physics.
3. Have demonstrated oral and written communications skills.
4. Can find, read, and critically evaluate selected original scientific literature.
5. Have an ability to learn independently.

6. Understand options for careers and further education, and have the necessary educational preparation to pursue those options.
7. Have acquired the broad education envisioned by the WPI Plan.
8. Are prepared for entry level careers in a variety of fields, and are aware of the technical, professional, and ethical components.
9. Are prepared for graduate study in physics and/or other fields.

Program Distribution Requirements for the Physics and Engineering Physics Majors

The normal period of residency at WPI is 16 terms. In addition to the WPI requirements applicable to all students (see page 7), completion of a minimum of 10 units of study is required in the areas of mathematics, physics, and related fields as follows:

PHYSICS

REQUIREMENTS	MINIMUM UNITS
1. Mathematics (Note 1).	3
2. Physics (including the MQP) (Notes 2, 3).	5
3. Other subjects to be selected from mathematics, science, engineering, computer science, and management (Note 3).	2

NOTES:

1. Mathematics must include at least 2/3 unit of mathematics at the level of MA 3000 or higher.
2. ES 3001 and CH 3510 count as physics courses.
3. Either item 2 or 3 must include at least 1/3 unit from each of the five principal areas of physics: mechanics, experimental physics, electromagnetism, quantum mechanics, and thermal and statistical physics. This core distribution requirement is satisfied by successfully completing at least one course from each of the following five sets of courses: PH 2201 or 2202 (mechanics); PH 2651 or 2601 (experimental physics); PH 2301 or 3301 (electromagnetism); PH 3401 or 3402 (quantum mechanics); ES 3001, CH 3510, or PH 4206 (thermal and statistical physics); or other courses approved by the department Program Review Committee following petition by the student.

ENGINEERING PHYSICS

1. Same requirements as PHYSICS, with the addition that the 10 units must include 2 units of coordinated engineering and other technical/scientific activities. The 2-unit program must be formulated prior to final year of study by the student in consultation with the academic advisor, and must be certified prior to the final year by the departmental Program Review Committee.

PHYSICS AND ENGINEERING-PHYSICS PROGRAMS

For a student entering the study of physics, there is a natural progression of subjects which provide a foundation for advanced work within physics and engineering-physics programs. This constitutes a core sequence which embodies the following indispensable basic areas of study: classical mechanics, electromagnetism, a survey of modern physics, statistical and quantum physics, and laboratory experimental methods. Because the language of the exact sciences is mathematics, there is a parallel core sequence of mathematics courses normally taken either as preparation for or concurrently with the physics courses with

which they are paired in the list presented below. In the following table \longrightarrow indicates that the mathematics course is strongly recommended; \longleftrightarrow indicates that concurrent study is acceptable.

MA 1021 Calculus I	\longleftrightarrow	PH 1110 Mechanics
MA 1022 Calculus II	\longleftrightarrow	PH 1120 Electricity and Magnetism
MA 1023 Calculus III	\longleftrightarrow	PH 1111 Mechanics
MA 1024 Calculus IV	\longleftrightarrow	PH 1121 Electricity and Magnetism
MA 1023 Calculus III	\longleftrightarrow	PH 1130 Introduction to 20th Century Physics
MA 1024 Calculus IV	\longleftrightarrow	PH 1140 Oscillations and Waves
MA 2051 Differential Equations	\longleftrightarrow	PH 2202 Intermediate Mechanics II
MA 2071 Linear Algebra	\longrightarrow	PH 2651 Physics Laboratory
MA 2251 Vector/Tensor Calculus	\longrightarrow	PH 2301 Electromagnetic Fields I
MA 4451 Boundary Value Problems	\longleftrightarrow	PH 3301 Electromagnetic Theory
	\longrightarrow	PH 3401 Quantum Mechanics I
		PH 4206 Statistical Physics

Physics and engineering-physics students should also reserve part of their undergraduate experience for developing perspective in a range of other science and engineering disciplines. A few of the many possibilities are illustrated by the following examples.

- Chemistry (CH 1010, 1030); Material Science (ES 2001). Choosing appropriate materials is often crucial in the development of new experimental techniques that can further our knowledge of physical phenomena. Conversely, the studies of physicists have had profound effects on the development of new materials.
- Electronics, both analog (ECE 2201 and 3204, and digital (ECE 2022). Electronics pervades the modern laboratory. It is valuable to learn electronic principles and designs as they are applied in modern “on-line” experimental data collection and data reduction systems.
- Computer science (CS 1101 or CS 1102 and CS 2301). Physics students will need to make skillful use of computers in present and future experimental data processing, theoretical analyses, and the storing, retrieving and displaying of scientific information.
- Engineering courses related to science. Some basic knowledge in areas such as heat transfer, control systems, fluid mechanics, stress analysis and similar topics will prove to be of great benefit to the physicist called upon to apply professional knowledge to practical engineering problems.

Building on this core and topical subject coverage, physics students are in a position to turn in any number of directions within the range of physics studies, depending on individual interests and career objectives. Six illustrative examples are outlined below. In each case the outline includes a list of recommended and related courses followed by a sampling of project opportunities in the respective areas. Selection of specific courses and projects should be determined by students’ interests and the guidance of their academic advisors and the engineering-physics coordinator. For courses outside of the physics department, students are advised to discuss the prerequisites with the instructor.

1. Physics

Recommended Courses

PH 3402	Quantum Mechanics II
PH 511	Classical Mechanics
PH (IS/P)	Selected Readings in Physics

Related Courses

ECE 2029	Introduction to Digital Circuit Design
ECE 2311	Continuous-Time Signal and System Analysis
ECE 2312	Discrete-Time Signal and System Analysis
ES 3011	Control Engineering I
MA 4291	Applicable Complex Variables
PH 2510	Atomic Force Microscopy
PH 3501	Relativity
PH 3502	Solid State Physics
PH 3503	Nuclear Physics
PH 3504	Optics
PH (IS/P)	Modern Optics

2. Computational Physics

Recommended Courses

MA 3257	Numerical Methods for Linear and Non-Linear Systems
MA 4411	Numerical Solutions of Differential Equations
PH (IS/P)	Numerical Techniques in Physics

Related Courses

ECE 2029	Introduction to Digital Circuit Design
ECE 2311	Continuous-Time Signal and System Analysis
ECE 2312	Discrete-Time Signal and System Analysis
ES 3011	Control Engineering I
CS 1101	Introduction to Program Design
CS 2011	Introduction to Computer Organization and Assembly Language
CS 2301	Systems Programming for Non-Majors
CS 4731	Computer Graphics
MA 3457/CS 4033	Numerical Methods for Calculus and Differential Equations
MA 4291	Applicable Complex Variables
PH 3402	Quantum Mechanics II
PH 3502	Solid State Physics

3. Optics

Recommended Courses

PH 2501	Photonics
PH 2502	Lasers
PH 3504	Optics

Related Courses

AR/ID 3150	Light, Vision, and Understanding
ECE 2311	Continuous-Time Signal and System Analysis
ECE 2312	Discrete-Time Signal and System Analysis
ES 3011	Control Engineering I
MA 4291	Applicable Complex Variables
PH 3402	Quantum Mechanics II
PH 3502	Solid State Physics

4. Electromagnetism

Recommended Courses

PH (IS/P)	Modern Optics
PH (IS/P)	Selected Readings in Electromagnetism

Related Courses

ECE 2311	Continuous-Time Signal and System Analysis
ECE 2312	Discrete-Time Signal and System Analysis
ES 3011	Control Engineering I
MA 4291	Applicable Complex Variables
PH 3402	Quantum Mechanics II
PH 3502	Solid State Physics

PH 3503	Nuclear Physics
PH 3504	Optics
PH 514/5	(Graduate) Quantum Mechanics
PH 533	(Graduate) Electromagnetic Theory

5. Nuclear Science and Engineering

Recommended Courses

NSE 510	Introduction to Nuclear Science and Engineering
NSE 520	Applied Nuclear Physics
PH (ISP/P)	Nuclear Physics Applications
PH 3503	Nuclear Physics

Related Courses

ECE 2029	Introduction to Digital Circuit Design
ECE 3801	Advanced Logic Design
ES 3011	Control Engineering I
ME 4832	Corrosion and Corrosion Control
PH 3402	Quantum Mechanics II
PH 3501	Relativity

6. Thermal Physics

Recommended Courses

ES 3001	Introduction to Thermodynamics
ES 3004	Fluid Mechanics
PH 3206	Statistical Physics
PH (IS/P)	Selected Readings in Thermal Physics

Related Courses

ES 3003	Heat Transfer
ES 3011	Control Engineering I
ME 3410	Compressible Flow
ME 4429	Thermodynamic Applications and Design
PH 3502	Solid State Physics
PH 3504	Optics

7. Biophysics

Recommended Courses

ES 3001	Introduction to Thermodynamics
ME/BME 4504	Biomechanics
ME/BME 4606	Biofluids
PH 3206	Statistical Physics
PH (IS/P)	Review of Biophysics

Related Courses

BB 2550	Cell Biology
BME 2210	Biomechanical Signals, Instruments, and Measurements
BME 2511	Introduction to Biomechanics and Biotransport
CH 4110	Biochemistry I
CH 4120	Biochemistry II
CH 4160	Membrane Biophysics
ES 3004	Fluid Mechanics

PHYSICS MINOR

The Physics Minor offers non-Physics majors the opportunity to broaden their understanding of both the principles of physics and the application of those principles to modern day engineering problems. In these times of rapid technological change, knowledge of fundamental principles is a key to adaptability in a changing workforce.

Two units of coordinated physics activity are required for the Physics Minor, as follows (note that, in accordance with Institute policy, no more than 3/3 of these units may be double-counted toward other degree requirements):

- Any or all of the following four introductory courses:
PH 1110 or PH 1111
PH 1120 or PH 1121
PH 1130
PH 1140
- At least 2/3 unit of upper level physics courses (2000 level or higher), which may include IS/P courses or independent studies approved by the program review committee. Examples of courses of this type which might be selected are (but are not limited to):
PH 2201 Intermediate Mechanics I
PH 2301 Electromagnetic Fields
PH 2651 Physics Laboratory
PH 3401 Quantum Mechanics I
PH 3504 Optics
PH 2501 Photonics
IS/P Quantum Engineering

Students who have taken the four course introductory sequence should have an adequate physics background for these courses; see, however, the individual course descriptions for the expected mathematical background. Other physics courses may be selected for the physics minor, but the recommended background for such courses often includes one or more of the courses listed above.

3. Capstone Experience

The capstone experience for the physics minor can be satisfied either by an independent study arranged for this purpose, or by one of the upper level courses. If the second option is chosen, the student must discuss this with the instructor prior to the start of the course. In either case, documentation of the capstone experience will consist of a paper, prepared in consultation with the instructor or independent study advisor, which incorporates and ties together concepts learned in the physics courses selected.

For more information, or assistance in selecting a minor advisor or an independent study advisor, see the Head of the Physics Department in Olin Hall 119.

Majors in Physics or Engineering Physics do not qualify for a Minor in Physics.

PRE-LAW PROGRAMS

ADVISOR: K. RISSMILLER

Law schools do not require that undergraduates complete any particular course of study. Thus, students who complete degrees in engineering and science may wish to consider careers in law. Undergraduates interested in attending law school are encouraged to choose from among the many courses offered which explore legal topics. For those with greater interest, WPI offers a Minor in Law and Technology described on page 110. Courses with substantial legal content are listed among those courses fulfilling the requirements of the minor.

Enrolling in these courses will introduce students to the fundamentals of legal process and legal analysis. Students will study statutes, regulations and case law. These courses will, therefore, offer the student valuable exposure to the kind of material commonly studied in law schools and they may help demonstrate a student's interest to law school admission committees. IQPs in Law and Technology, or other projects that

involve library research and extensive writing may also be helpful.

A pre-law advising program in the Social Science Department maintains information on careers in law, law schools, and the law school admission test (LSAT), which is universally required. Students may examine this material independently or make an appointment. Students with an interest in law are also encouraged to join the Pre-Law Society. To do so, contact Professor Rissmiller.

To see the Law and Technology Minor, go to page 110.

FIVE-YEAR DUAL BACHELOR/M.S. IN MANAGEMENT (MSMG)

The combination of a technical undergraduate degree and a graduate degree in business has been cited by many experts as the ideal educational preparation for a career in private industry. For that reason, the School of Business offers the opportunity for obtaining dual degrees - the Bachelor of Science (BS) and the Master of Science in Management (MSMG). Moreover, the MSMG provides a compelling pathway to the Master of Business Administration (MBA) while recognizing the value of work experience. Upon receiving your MSMG from WPI, and after a minimum of 2 years of work experience and within 6 years of completing your MSMG, you may apply to return to WPI, either full-time or part-time, to earn your MBA in just 7 additional courses, including the hallmark project experience of WPI.

The dual BS/MS in Management program can be completed within five years, however, the program is demanding, and curriculum planning with the student's advisor and the School of Business should start by the beginning of the student's third year at WPI. Only registered WPI undergraduates may enter the dual-degree program. A separate and complete application to the MSMG program must be submitted during the student's third year of undergraduate study. Admission to the dual BS/MSMG program is determined by the School of Business.

A student in the dual BS/MSMG program continues to be registered as an undergraduate until the bachelor's degree is awarded. BS/MSMG students must satisfy all requirements for the bachelor's degree, including distribution and project requirements, as well as all MSMG requirements.

MSMG students complete 7 of the following required principal courses:

- BUS 500 Business Law, Ethics, and Social Responsibility
- FIN 500 Financial Information and Management
- FIN 501 Economics for Managers
- MIS 500 Innovating with Information Systems
- MKT 500 Understanding Customers and Creating Value
- OBC 500 Group and Interpersonal Dynamics in Complex Organizations
- OIE 500 Analyzing and Designing Operations to Create Value

Students then select 3 electives, 2 of which must be from the School of Business.

A student in the dual BS/MSMG may, with prior approval, apply the equivalent of a maximum of 12 graduate credits from the same courses toward both the bachelor's and master's degrees. Students must be admitted into the dual BS/MSMG prior to taking graduate-level business courses.

The School of Business may make other requirements as it deems appropriate in any individual case. These requirements take the form of a written agreement between the student and the School of Business, and must be filed with the registrar before the student may be matriculated in the dual BS/MSMG program.

PRE-MEDICAL, PRE-DENTAL, PRE-OPTOMETRY, AND PRE-VETERINARY PROGRAMS

ADVISOR: A. CARLSEN-BRYAN

Students at WPI who wish to pursue careers in the health professions should, in consultation with their academic advisors, plan their academic programs to include courses in biology, general and organic chemistry, and physics including laboratory experiences. Entry into medical or other health professions schools may be accomplished through any major program of study offered at WPI, although students majoring in some programs may have to use all of their electives to fulfill the required courses for medical school admission. It is important for students to work closely with their academic advisors as well as the pre-health advisor at WPI, to formulate an academic plan of study that will include the courses required for health professions schools. While each school may have specific and individual admissions requirements, typically these will include:

General chemistry*	3 courses
Organic chemistry*	3 courses
Biology*	3 courses
Physics*	3 courses
Calculus	2 courses
English composition**	2 courses

* These courses must include laboratory components.

** Check with the pre-health advisor for the use of course and project work to fulfill this requirement.

Students should consult catalogs of the individual health professions schools for specific requirements.

The WPI projects system offers a tremendous advantage to pre-health professions students. Medical, dental and veterinary schools value teamwork, as well as cross cultural, research, and medically related experience, all of which can be demonstrated through project work. Opportunities for such projects can be found on campus or at one of the project center sites at the University of Massachusetts Medical Center or Tufts University's Cummings School of Veterinary Medicine or through WPI's global projects program. These projects provide students with

valuable and unique experiences that can strengthen their commitment to a health profession and their application for admission to health professions schools.

Because students will leave WPI with a degree in an academic discipline, they will have other career opportunities should they decide not to pursue a career in a health profession or should they choose to work for some time after graduation before continuing on to a health professions school. Students or alumni applying to health professions school should plan to meet with the pre-health advisor to discuss the application process as well as to plan for a letter of recommendation from the pre-health office to support their application. These meetings should happen no later than the spring of the junior year or as soon as the decision is made to pursue admission to a health profession school.

TEACHER LICENSING

ADVISORS: J. GOULET AND A. CARLSEN-BRYAN

WPI students wishing to receive the Initial License as middle or high school teachers in Massachusetts or states with reciprocating agreements with Massachusetts in the areas of Biology, Chemistry, Mathematics or Physics can do so by passing the Massachusetts MTEL test, taking a Teaching Methods course (ID 3100), performing observation and practice teaching and developing an IQP based on this experience, and taking Psychology of Education (PSY 2401) and Cross-Cultural Psychology (PSY 2406). Also required are courses in the appropriate subject matter meeting State guidelines as defined in Massachusetts regulations (603 CMR 7.00). Students wishing to discuss or pursue this should see Professor John Goulet (MA) and/or see <http://www.wpi.edu/academics/prehealth.html>.

ROBOTICS ENGINEERING

DIRECTOR: M. A. GENNERT

ASSOCIATE DIRECTORS: F. J. LOOFT, K. STAFFORD

ASSOCIATED FACULTY: H. K. Ault (ME), C. A. Brown, D. C. Brown (CS), S. H. Chernova, M. J. Ciaraldi (CS), E. Cobb (ME), D. Cyganski (ECE), M. A. Demetriou (ME), R. J. Duckworth (ECE), A. E. Emanuel (ECE), G. Fischer (ME), M. S. Fofana (ME), C. Furlong-Vazquez (ME), M. A. Gennert (CS), D. Granquist-Fraser (BME), A. H. Hoffman (ME), S. Jarvis (ECE), R. W. Lindeman (CS), F. J. Looft (ECE), W. R. Michalson (ECE), S. S. Nestinger (ME), R. L. Norton (ME), T. Padir (ECE), C. B. Putnam (CS), C. Rich (CS), Y. Rong (ME), L. E. Schachterle (HUA), C. L. Sidner (CS), K. A. Stafford (ME), E. Torres-Jara (CS)

MISSION STATEMENT

Robotics—the combination of sensing, computation and actuation in the real world—is on the verge of rapid growth, driven by both supply and demand. The supply side is driven by decreasing cost and increasing availability of sensors, computing devices, and actuators. The demand side is driven by national

needs for defense and security, elder care, automation of household tasks, customized manufacturing, and interactive entertainment. Engineers working in the robotics industry are mostly trained in one of Computer Engineering, Computer Science, Electrical Engineering, Mechanical Engineering, and Software Engineering. No single discipline provides the breadth demanded by robotics in the future.

PROGRAM EDUCATIONAL OBJECTIVES

The Robotics Engineering Program strives to educate men and women to:

- Have a basic understanding of the fundamentals of Computer Science, Electrical and Computer Engineering, Mechanical Engineering, and Systems Engineering.
- Apply these abstract concepts and practical skills to design and construct robots and robotic systems for diverse applications.
- Have the imagination to see how robotics can be used to improve society and the entrepreneurial background and spirit to make their ideas become reality.
- Demonstrate the ethical behavior and standards expected of responsible professionals functioning in a diverse society.

PROGRAM OUTCOMES

Graduating students will have:

- an ability to apply broad knowledge of mathematics, science, and engineering,
- an ability to design and conduct experiments, as well as to analyze and interpret data,
- an ability to design a robotic system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability,
- an ability to function on multi-disciplinary teams,
- an ability to identify, formulate, and solve engineering problems,
- an understanding of professional and ethical responsibility,
- an ability to communicate effectively,
- the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context,
- a recognition of the need for, and an ability to engage in life-long learning,
- a knowledge of contemporary issues, and
- an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Program Distribution Requirements for the Robotics Engineering Major

REQUIREMENTS	MINIMUM UNITS
1. Mathematics (Note 1)	7/3
2. Basic Science (Note 2)	4/3
3. Entrepreneurship	1/3
4. Engineering Science and Design, including the MQP (Notes 3, 4, 5, 6, 7, 8, 9)	6*

NOTES:

- Must include Differential and Integral Calculus, Differential Equations, Linear Algebra, and Probability.
 - Must include at least 2/3 units in Physics.
 - Must include at least 5/3 units in Robotics Engineering, including RBE 2001, RBE 2002, RBE 3001, and RBE 3002, or equivalent.
 - Must include at least 1 unit in Computer Science, including Object-Oriented Programming and Software Engineering.
 - Must include at least 2/3 units in Electrical and Computer Engineering, including Embedded Systems.
 - Must include at least 1/3 unit in Statics and 1/3 unit in Controls.
 - Must include at least 1/3 unit of Social Implications of Technology (CS 3043, GOV 2302, GOV/ID 2314, STS 2208).
 - Must include at least 1 unit from a list of Robotics Electives, of which at least 1/3 unit must be in Advanced Systems (CS 4341, ECE 3308, ME 3310).
 - The MQP must be a Capstone Design Experience in Robotics Engineering.
- * 6 units if GOV 2302, GOV/ID 2314, or STS 2208 are double-counted as meeting the Social Science Requirement and Engineering Science and Design Requirement.

OTHER ROBOTICS PROGRAMS

WPI students can also pursue specializations involving Robotics in other departments. The department of Electrical and Computer and the department of Mechanical Engineering both encourage a focus on robotics, as detailed in their departmental descriptions. Both of these departments have sponsored final capstone design projects involving the application of their disciplines to robotics. Robotics activities are coordinated by Ken Stafford, Director of the Robotics Resource Center and head of the WPI FIRST competitive program. He oversees an active lab where students design various robotics devices in the lower level of Higgins Laboratories. You may contact him for information at (508) 831-6122 or stafford@wpi.edu.

ROBOTICS ENGINEERING MINOR

The Minor in Robotics Engineering consists of 2 units of work distributed as follows:

- 1/3 unit CS selected from CS 2102, CS 2223, CS 2301, CS 2303, CS 3733.
- 1/3 unit ECE selected from ECE 2010, ECE 2019, ECE 2029, ECE 2049, ECE 2311.
- 1/3 unit ME/ES selected from ES 2501, ES 2503, ES 3011, ME 3310.
- 2/3 units from RBE 1001, RBE 2001, RBE 2002.
- A 1/3 unit capstone experience through an RBE course at 3000-level or above.

No more than 1 unit of work may overlap the major.

Students considering a Robotics Engineering Minor should consult with the RBE Undergraduate Program Committee.

SOCIAL SCIENCE AND POLICY STUDIES

J. K. DOYLE, HEAD

PROFESSOR: K. Saeed

ASSOCIATE PROFESSORS: J. K. Doyle, J. Gobert, O. Pavlov, M. J. Radzicki, K. J. Rissmiller, J. M. Wilkes

ASSISTANT PROFESSORS: L. Elgert, M. John, J. Skorinko, A. Smith

ADJUNCT FACULTY: W. Baller, R. Bilge, G. Heaton, D. Kantarelis, J. Morecroft, K. Warren, J. Yee

MISSION STATEMENT

Recognizing the increasingly important role that the social sciences play in our complex, technological world, the Department of Social Science and Policy Studies offers cutting edge educational and research programs in a variety of disciplines, including economics, environmental and sustainability studies, government/law, learning sciences, psychology, sociology, and system dynamics. Our programs, ranging from undergraduate general education in the social sciences to interdisciplinary Ph. D. degrees, are distinguished by their emphasis on behavioral science, commitment to project-based learning, and use of state of the art methods and technologies. We are committed to helping students at all levels to think critically about important societal problems and to identify effective solutions.

PROGRAMS

The SSPS Department supports general education in the social sciences through the university-wide Social Science Requirement. The Department offers B.S. degrees and minors in Economic Science, Psychological Science, Society, Technology & Policy, and System Dynamics. The Department also serves as the home for the Pre-Law program and Law & Technology Minor and is the lead department for the interdisciplinary B.A. program in Environmental and Sustainability Studies. Given the diversity of offerings in the department, each program has a unique set of goals and outcomes.

For additional advice about course selections, students should consult with their academic advisor. Detailed curriculum guidelines for each program as well as recommendations for completing the Social Science Requirement are available on the Social Science and Policy Studies Department Web site (www.wpi.edu/academics/ssps.html).

COURSE AREAS

The SSPS Department covers many of the traditional social science disciplines. Courses with the following prefixes are found in the Department:

ECON	Economics
ENV	Environmental and Sustainability Studies
GOV	Political Science, Government, and Law
PSY	Psychology
SD	System Dynamics
SOC	Sociology
SS	General Social Science
STS	Society-Technology Studies

DOUBLE MAJOR IN SOCIAL SCIENCE AND POLICY STUDIES

Any of the major programs offered by the SSPS Department may be taken as part of a double major in which the student majors in an area of science, engineering or management as well as social science. To obtain a double major, the student must satisfy all of the degree requirements of both majors, including the MQP and Distribution requirements. However, the MQP in the social science discipline may double count as the IQP, provided that the combined project meets the goals of both. It must be interactive in nature involving an aspect of technology as well as an application of social science knowledge and analytical techniques. Thus double majors for whom one of the majors is in the social sciences requires only two projects, not three. The decision to pursue the social science double major should be made fairly early in the student’s academic career, certainly early enough to ensure the selection of an appropriate IQP/MQP.

UNDERGRADUATE RESEARCH OPPORTUNITIES

SSPS faculty are actively engaged in experimental research in a variety of applied social science areas, with particular strength in economics, learning sciences, psychology, and system dynamics. Undergraduates interested in gaining experience in behavioral research should contact one or more of the following faculty about opportunities to work in social science research laboratories:

- Educational Psychology Lab (Prof. Baker)
- Experimental Economics Lab (Prof. Smith)
- Learning Sciences Lab (Prof. Gobert)
- Social Psychology Inquiry Lab (Prof. Skorinko)

ECONOMIC SCIENCE PROGRAM

Economists study how both individuals and institutions make decisions about the utilization and distribution of resources. They also monitor economic data and analyze trends, examine the impact of economic policies and behaviors, and help formulate new policies and anticipate their effects. WPI’s economic science major emphasizes the use of computational modeling and experimentation to achieve these goals.

PROGRAM OUTCOMES

In addition to fulfilling WPI’s university-wide undergraduate learning outcomes, economic science majors will demonstrate:

1. Command of macro-economic and micro-economic theory.
2. Awareness of economic history and the evolution of thought in economics.
3. Skills in key economic modeling techniques, including econometrics and system dynamics.
4. Skills using data collected in a variety of ways, including surveys, experiments and through observation in the field.
5. Skill in mathematics as required to approach and solve economic problems.
6. Practical understanding of modern business disciplines including accounting and finance.

7. Knowledge of key economic institutions that make policy and influence economic practice.
8. Ability to understand current economic issues in light of economic theories.
9. Ability to approach and solve a practical problem like an economist.
10. Deep understanding of fundamental economic problems in a specific area of application.

Program Distribution Requirements for the Economic Science Major

The normal period of residency at WPI is 16 terms. In addition to the WPI requirements applicable to all students, completion of a minimum of 10 units of study is required in economics, social science, basic science, and mathematics as follows:

ECONOMIC SCIENCE REQUIREMENTS	MINIMUM UNITS
1. Economics (Note 1).	3
2. Economics and/or Management (Note 2)	2/3
3. Other Social Science	1
4. Modeling Techniques	2/3
5. Mathematics (Note 3)	2
6. Basic Science	1
7. Electives	2/3
8. MQP	1

NOTES:

1. Must include courses in both micro and macro economic theory at the intermediate level and in econometrics and international trade (available through the Consortium or independent study).
2. Must include financial accounting, ACC1100. May include other relevant business courses as approved by the Departmental Program Review Committee.
3. Must include differential equations, integral calculus, and statistics.

CONCENTRATION AREAS AVAILABLE IN ECONOMIC SCIENCE

Economic Science majors may focus their studies by choosing a Concentration within one of the following two specific areas of Economics: Sustainable Economic Development and Computational Economics. These concentration areas reflect the growing importance of environmental issues and computational tools within the discipline of economics and are areas of strength in teaching and research in the social sciences at WPI. Concentrations within the Economics Science major comply with WPI’s requirements for concentrations. Students must complete an MQP and two units of integrated study in the area of their Concentration.

Sustainable Economic Development. The term sustainable economic development means choosing policies that balance environmental preservation and economic development so as to meet the needs of the present generation without seriously compromising the needs of future generations. The sustainable development concentration examines the economic, psychological, social, political, legal, and technical issues surrounding the creation of policies aimed at establishing sustainable economic systems at the local, national, and international levels.

- 1 unit from the following list of courses in economic development:
 - ECON 2125 Development Economics
 - ECON 2117 Environmental Economics
 - CE 3070 Urban Environmental Planning
 - CE 3074 Environmental Analysis
 - HI 3333 Topics in American Technological Development
2. 1 unit from the following list of environmental courses in other social science disciplines, humanities, and biology, or additional courses from list 1:
 - BB 1002 Environmental Biology
 - BB 4150 Environmental Change: Problems and Approaches
 - ENV 1100 Introduction to Environmental Studies
 - ENV2200 Environmental Studies in the Various Disciplines
 - ENV 2400 Environmental Problems and Human Behavior
 - GOV 2311 Legal Regulation of the Environment
 - GOV 2312 International Environmental Policy
 - PY 2717 Philosophy and the Environment

Computational Economics. Students in the computational economics concentration supplement their knowledge of traditional tools of economic analysis by studying modern computational techniques. Student projects may address problems of complex macroeconomic modeling, chaos, computational finance, design of automated Internet markets, and many more. This concentration draws on the expertise and talent of the faculty in various departments throughout the university.

- 1 unit from the following list of courses in system dynamics:
 - SD 1510 Introduction to System Dynamics Modeling
 - SD 1520 System Dynamics Modeling
 - SD 2530 Advanced Topics in System Dynamics Modeling
 - SD 3550 System Dynamics Seminar
2. 1 unit from the following list of courses offered in other departments:
 - CS 2022/MA2201 Discrete Mathematics
 - CS 4032/MA3257 Numerical Methods for Linear and Nonlinear Systems
 - CS 4033/MA3457 Numerical Methods for Calculus and Differential Equations
 - CS 4341 Introduction to Artificial Intelligence
 - ES 3011 Control Engineering I
 - OIE 3460 Simulation Modeling and Analysis
 - OIE 3510 Stochastic Models
 - MA 2210 Mathematical Methods in Decision Making
 - MA 2431 Mathematical Modeling with Ordinary Differential Equations
 - MA 3471 Advanced Ordinary Differential Equations
 - MA 4235 Mathematical Optimization
 - MA 4411 Numerical Analysis of Differential Equations

PSYCHOLOGICAL SCIENCE PROGRAM

Psychology is the study of the entire range of human experience, thought, and behavior, from infancy until death, from the most abnormal behavior to the most mundane, from the behavior of neurons to the actions of societies and nations. Psychologists employ a wide variety of methods to understand behavior and to discover how best to improve performance, including controlled experiments on human subjects. WPI's major in psychological science emphasizes empirical research in the areas of social and cognitive psychology as well as practical applications to the classroom, the courtroom, and other settings.

PROGRAM OUTCOMES

In addition to fulfilling WPI's university-wide undergraduate learning outcomes, psychological science majors will demonstrate:

1. Familiarity with the major concepts, theoretical perspectives, empirical findings, and trends in psychology.
2. Understanding of and ability to apply basic research methods in psychology, including experimental design, data analysis, and interpretation.
3. Ability to apply psychological principles to personal, social, organizational, and societal issues, including developing insight into their own and others' behavioral and mental processes.
4. Understanding of the relationship and interactions between psychology and other social science domains.
5. Ability to understand the role of and apply knowledge of psychological phenomena in other domains, such as business, computer science, or biology.
6. Ability to recognize, understand, and respect the complexity of sociocultural and international diversity.
7. Understanding of the ethics of human subjects research and the ability to apply that understanding in designing research or practices that do not violate ethical guidelines.
8. Knowledge of basic science and how it contributes to understanding human behavior.

[Adapted from the American Psychological Association Report on Undergraduate Psychology Learning Goals and Outcomes.]

Program Distribution Requirements for the Psychological Science Major

The normal period of residency at WPI is 16 terms. In addition to the WPI requirements applicable to all students, completion of a minimum of 10 units of study is required in psychological science, social science, basic science, and mathematics as follows:

PSYCHOLOGICAL SCIENCE REQUIREMENTS	MINIMUM UNITS
1. Psychological Science (Note 1)	3
2. Psychological Science and/or Related Courses (Note 2)	1
3. Other Social Science (Note 3)	1
4. Basic Science, Computer Science, and/or Engineering (Note 4)	5/3
5. Mathematics (Note 5)	4/3
6. Electives (Note 6)	1
7. MQP	1

NOTES:

1. Must include introductory psychology, social psychology, cognitive psychology, and research methods.
2. Related courses must be chosen from a list of psychology-related courses from other departments maintained by the Psychology Program Review Committee.
3. May include no more than two courses at the 1000-level.
4. Must include 1/3 unit of biology. Must include 1/3 unit of computer science (except CS 2022 and CS 3043).
5. Must include 2/3 units of calculus and 2/3 unit of statistics.
6. The 1 unit of electives must be coherently defined and approved by the Psychology Program Review Committee.

SOCIETY, TECHNOLOGY, AND POLICY PROGRAM

Policy analysts apply an array of skills and techniques to evaluate the impacts of existing policies, both public and private, and to help formulate new policies to address societal needs. WPI's major in society, technology, and policy focuses on the relationships between science-technology, society, government, and business. The program allows students to develop a strong interdisciplinary background in these areas and to learn the analytical tools and methods needed to apply this knowledge to important questions in such areas as environmental policy and regulation, science-technology policy, and internet policy.

PROGRAM OUTCOMES

In addition to fulfilling WPI's university-wide undergraduate learning outcomes, society, technology, and policy majors will demonstrate:

1. Ability to conduct public policy analysis, technology assessment, or social impact analysis.
2. Understanding of and ability to apply research methods in the social sciences.
3. Ability to communicate effectively the results of a social analysis with policy implications in speech and writing.
4. Understanding of the relationships between technology, policy, and the public interest in a democratic society.
5. Ability to integrate understanding of science and technology into thinking on the social implications of science and technology.
6. Ability to understand the impacts of government regulation on the future development of a technology or industry.
7. Literacy in the technological aspects of policy issues in the student's area of concentration.
8. Ability to identify and appropriately consider ethical constraints during science and technology policy deliberations and decision-making.

Program Distribution Requirements for the Society, Technology, and Policy Major

The normal period of residency at WPI is 16 terms. In addition to the WPI requirements applicable to all students, completion of a minimum of 10 units of study is required in social science, basic science, and mathematics as follows:

SOCIETY, TECHNOLOGY AND POLICY REQUIREMENTS

	MINIMUM UNITS
1. Social Science (Notes 1, 2)	4
2. Minimum Basic Science background	2/3
3. Minimum Mathematics background (Note 3)	1
4. Technical concentration (Note 4)	5/3
5. Electives (Note 5)	5/3
6. MQP	1

NOTES:

1. Students must obtain approval of their proposed program from the Departmental Program Review Committee. Course distribution will focus on a disciplinary specialty and either policy analysis or a society-technology specialization such as Social Impact Analysis or Technology Assessment.
2. Relevant Humanities or Business courses approved by the Departmental Review Committee may be counted for a maximum of 2/3 of a unit in fulfilling the 4-unit requirement.
3. One course in calculus-based statistics is required.
4. A series of courses in one field of science, engineering, or business or a combination of courses approved by the departmental review committee which focus on issues to be developed in the MQP.
5. These courses are to be approved by the Departmental Review Committee and are meant to broaden the technical concentration and tie it to social concerns.

SYSTEM DYNAMICS PROGRAM

System dynamicists develop and test computer simulation models to analyze causal relationships in complex social, economic, and physical systems. The tools and techniques of system dynamics enable decision makers and policymakers to engage in long-term, big picture thinking that explores the structure and feedback relationships in complex systems and to anticipate the implications of their policies before implementing them. WPI's system dynamics major provides a strong background in the tools and techniques of system dynamics modeling and the opportunity to apply this knowledge to develop policy solutions to complex social problems in a variety of application areas.

PROGRAM OUTCOMES

In addition to fulfilling WPI's university-wide undergraduate learning outcomes, system dynamics majors will demonstrate:

1. Ability to recognize the dynamic patterns of behavior in real-world data.
2. Ability to formulate feedback hypotheses representing problems and understand the hypotheses' logic.
3. Ability to translate feedback hypotheses into stock and flow models.
4. Ability to experiment with stock and flow models in order to establish their fidelity.

5. Ability to design experiments with a stock and flow model, implement them, and interpret their results, in order to arrive at effective solutions that address the defined problems of a system dynamics project.
6. Literacy in the technical aspects of problems in the student's area of application.
7. Ability to communicate effectively the results of a system dynamics analysis in speech and writing.
8. An understanding of basic concepts in software programming and management science.
9. An understanding of how to apply scientific principles in system dynamics modeling.
10. Ability to develop, organize, manage, and successfully conduct a significant system dynamics project.
11. Ability to locate and integrate valid and appropriate information from multiple fields and perspectives for use in systems dynamics models.
12. An understanding of the endogenous causes of societal problems.
13. An appreciation of the inter-connectedness between technology, society, and the environment.
14. Ability to form and work effectively in groups involving system dynamics modelers, appropriate domain experts, and stakeholders.

Program Distribution Requirements for the System Dynamics Major

The normal period of residency at WPI is 16 terms. In addition to the WPI requirements applicable to all students, completion of a minimum of 10 units of study is required in system dynamics, social science, basic science, and mathematics, and computer science as follows:

SYSTEM DYNAMICS REQUIREMENTS	MINIMUM UNITS
1. System Dynamics (Note 1)	5/3
2. Other Social Science (Note 2)	5/3
3. Business (Note 3)	2/3
4. Mathematics/basic sciences/engineering (Note 4)	8/3
5. Computer Science (Note 5)	2/3
6. Application Area (Note 6)	5/3
7. MQP	1

NOTES:

1. Only social science courses with a "5" in the second digit of the course number count toward the system dynamics requirement.
2. Must include microeconomics or macroeconomics, cognitive or social psychology, and public policy.
3. Must include organizational science.
4. Must include differential and integral calculus, differential equations, and numerical or statistical analysis.
5. Courses on computer programming and programming languages are recommended.
6. This requirement is satisfied by a cohesive set of work from the fields of social science, management, science, mathematics, computer science, or engineering as specified in the curriculum the guidelines for system dynamics major.

LAW AND TECHNOLOGY MINOR

As science and technology evolve, there are growing needs for professionals who both understand science and technology and who work within the institutions of the American legal system. At all levels, from federal courts to state regulatory agencies and local planning commissions, policy makers decide issues in an environment of legal rules and principles. Yet to be effective, they must also understand how science and technology can aid their decisions, the methods and conclusions of scientific research, and the social impact of decisions. Without science, environmental regulators cannot decide on measures for hazardous waste disposal, public health officials cannot evaluate new drug therapies, utility regulators cannot authorize new sources of electric power, judges cannot construe the meaning of medical testimony, and attorneys cannot cross examine an expert witness in a product failure case. Decision makers, and those who attempt to influence them, find that they need to understand science and technology.

The Law and Technology Program is an interdisciplinary minor that can be used to supplement a major, introduce students in science and engineering disciplines to legal studies and prepare students to enter law school upon graduation. Students in the program begin their studies with a foundation in legal institutions and analysis and continue with advanced courses that integrate law and technology. A course in professional communication is also required. Students complete their studies with a capstone research activity either in the sixth course or as a separate independent study.

To attain a Minor in Law and Technology, students must complete two units of study (6 courses) as follows:

1. Two of the following courses in legal fundamentals:

HI 2317	Law and Society in America, 1865-1910
GOV 1310	Law, Courts and Politics
GOV 2310	Constitutional Law: Foundations
GOV 2320	Constitutional Law: Civil Rights and Liberties
BUS 2020	The Legal Environment of Business Decisions
2. Two of the following courses which integrate law and technology:

CE 3022	Legal Aspects of Professional Practice
CE 4071	Land Use Development and Controls
CE 583	Contracts and Law for Civil Engineers
GOV 2302	Science-Technology Policy
GOV 2311	Environmental Policy and Law
GOV 2312	International Environmental Policy
GOV 2313	Intellectual Property Law
GOV/ID 2314	Cyberlaw and Policy

 Independent study or experimental courses with the approval of the pre-law advisor
3. One of the following courses in professional communication:

EN/WR 2210	Introduction to Professional Writing
EN/WR 2211	Elements of Writing
EN/WR 3214	Writing About Disease and Public Health
RH 3112	Rhetorical Theory

4. The capstone requirement can be met by taking either GOV 2312 International Environmental Policy or by registering for an independent study (ISP, 1/6th unit) with the approval and participation of one of the associated faculty. Minors enrolled in the course for their capstone experience will be required to complete the course requirements and an additional capstone research paper. In either case, capstone students are expected to summarize existing law in an area of student interest, identify problems with the law, evaluate proposals for change and recommend legislative or judicial changes.

Students should review their program of study with the associated faculty and/or pre-law advisor. Students are also encouraged to seek IQP opportunities in Division 53, Law and Technology. See page 18. Note: only one of the two units may be counted toward other college requirements.

For general policy on the Minor, see description on page 11.

SOCIAL SCIENCE MINORS

A Social Science Minor is available in any of the following disciplines:

- Economics
- Sociology
- Political Science and Law
- Psychology
- System Dynamics
- Social Science

A minor in the Social Sciences consists of 2 units of academic activity satisfying the following conditions:

1. Foundations

Introductory level courses in any one or two social science disciplines taught at WPI: economics (ECON), sociology (SOC), political science (and law) (GOV), psychology (PSY), and system dynamics (SD). Introductory courses are identified by the first digit of the course number, which must be a 1. The second digit of the course number indicates the discipline (1–economics, 2–sociology, 3–political science and law, 4–psychology, and 5–system dynamics).

2. Applied Courses (At least 1 unit)

Three or more higher level courses in the same social science discipline as the foundation courses, which involve applications or extensions of the material covered in the introductory courses and list the introductory courses as recommended background. High level courses have either a 2, 3, or 4 as

the first digit of the course number. The capstone experience will consist of a paper in the last applied course taken. The paper must draw upon and integrate material covered in the previous courses. An IQP may provide the capstone experience and substitute for the last applied course provided that the IQP was advised or co-advised by a member of the Social Science & Policy Studies department, and contains appropriate social science analysis.

3. If five or more of the six 1/3 units required for the minor are in a single social science discipline, the title of the minor will be “Minor” in that discipline.* Otherwise the title of the minor will be “Minor in Social Science.” Examples of minor programs in economics, sociology, political science (and law), psychology, system dynamics and interdisciplinary social science are available at the SS & PS department office. The course selected for an interdisciplinary social science minor should follow an identifiable theme, such as the relationship between technology and society or social, political, economic or environmental policies.

Students taking minors in the social sciences are expected to designate a member of the SS & PS department as their SS minor advisor, who will assist them in preparing a program that meets the requirements of the minor. Students can obtain assistance at the SS & PS departmental office in designating an advisor.

Students completing any major in the Social Science and Policy Studies Department may not also complete a minor in social sciences.

* In designating sociology the minor, the course PSY 1402, Social Psychology, can be counted as one of the five courses required in Sociology. In designating the economics minor, at least 3 of the 5 required courses must be chosen from among the following four theory courses:

- ECON 1110 Introductory Microeconomics;
- ECON 1120 Introductory Macroeconomics;
- ECON 2210 Intermediate Microeconomics; and
- ECON 2120 Intermediate Macroeconomics.

Social Science and Policy Studies	173

COURSES QUALIFYING FOR ENGINEERING DISTRIBUTION AREAS

Mathematics

All Courses designated "MA."

Advanced placement established by AP exam or through passing WPI advanced courses (see page 212) also qualify.

Basic Science

All courses designated "PH," "CH," "BB," and GE 2341.

Engineering Science/Design

The following courses may be applied to the "Engineering Science and Design" distribution requirement for each respective engineering major:

AE: All courses designated "AE"

BME: All courses designated "BME" (except BME 1001 and BME 3110) and CE, CHE, ECE, RBE, and ME courses at the 2000-level or above.

CE: All courses designated "CE". Also ES 2503 and ES 3004.

CHE: All courses designated "CHE." Also ES 3002, ES 3003, ES 3004, and other courses approved by the Chemical Engineering Department. See the department web site, and consult with your academic advisor for details.

ECE: All courses designated "ECE" and ES 3011 may be included in the six-unit ECE area distribution requirement.

IE: OIE courses including BUS 2080, BUS 3020, OIE 2850, OIE 3405, OIE 3410, OIE 3420, OIE 3460, OIE 3510, OIE 4410, and OIE 4460.

ME: All courses designated "ME".

RBE: All courses designated "RBE".

In addition, engineering majors selecting "Engineering Science/Design" courses from outside their major may choose appropriate activities from any of the following:

All courses designated ES, ECE, CHE, ME, RBE.

All OIE courses listed above (for ME majors only).

All courses designated as CE except CE 3022.

All courses designated as CS except CS 1101, CS 1102, and CS 3043. (Only RBE majors may select CS 1101 or CS 1102 to satisfy the Engineering Science and Design Distribution Requirement.

(Electrical and Computer Engineering majors are restricted to these courses at the 2000-level or higher.)

All ABET engineering programs require six units of Engineering Science and Design.

All graduate-level courses may be counted in the appropriate categories.

COURSE DESCRIPTIONS

COURSE CATEGORIES

for purposes of planning programs of study, courses at WPI are divided into two categories.

Category I (Cat. I)

These courses cover core material of interest to large numbers of students. Category I courses are offered at least once a year.

Category II (Cat. II)

Category II courses are usually offered every other year.

BACKGROUND

Recommended

The course will build on material in the recommended course. Instructors can assume that the student is knowledgeable of the material from the recommended course or from other experiences.

Suggested

The material from this course would be helpful to the student, but it is not assumed background.

CATALOG AND SCHEDULE ON THE WWW

The catalog and course schedule can be found on the world wide web at www.wpi.edu/+ugradcat and www.wpi.edu/+schedules.

COURSE NUMBERING

Each course at WPI is designated by a prefix identifying the subject area followed by a four digit number. The first digit is coded as follows:

- 1 — Courses for which first-year students will receive priority in registration. Upper class students may register on a space-available basis.
- 2 — Basic level courses.
- 3 — Advanced level undergraduate courses for which no graduate credit is given. (This restriction may be waived at the discretion of the degree department.)
- 4 — Advanced level undergraduate courses for which graduate credit may also be given.
- 5 — Graduate courses.

The last three digits may be used by the departments to indicate subject areas. Many graduate courses are also available to undergraduates.

COURSE CREDIT

Unless otherwise indicated, WPI courses usually carry credit of 1/3 unit. This level of activity suggests at least 15-17 hours of work per week, including work outside the classroom, as well as scheduled class and laboratory time. The usual workload per term is 1 unit.

AEROSPACE ENGINEERING

AE/ME 2713. ASTRONAUTICS.

Cat. I

An introductory course that covers the fundamentals of space flight, spacecraft trajectory analysis and mission design. Topics studied: orbital mechanics; geocentric orbits and trajectories; interplanetary transfers; ambient space environments for geocentric orbits and interplanetary transfers; introduction to spacecraft and mission design.

Recommended background: dynamics (ES 2503, PH 2201 or equivalent).

AE/ME 3410. COMPRESSIBLE FLUID DYNAMICS.

Cat. I

In this course, students are introduced to various compressibility phenomena such as compression (shock) and expansion waves. Conservation laws and thermodynamic principles are applied to the description of flows in which compressibility effects are significant. One-dimensional models are applied to analysis of flow in variable area ducts, normal and oblique shock waves, expansion waves, and flows with friction and heat addition. Numerous applications from engineering are investigated including supersonic inlets, rocket nozzles, supersonic wind tunnels, gas delivery systems, and afterburning jet engines.

Recommended background: thermodynamics (ES 3001, CH 3510 or equivalent), fluid dynamics (ES 3004 or equivalent).

AE/ME 3602. INCOMPRESSIBLE FLUIDS.

Cat. I

This course covers inviscid and viscous incompressible fluid dynamics at an intermediate level. Topics include: fluid kinematics and deformation; integral conservation laws of mass, momentum and energy for finite systems and control volumes; differential conservation laws of mass, momentum and energy; the Navier-Stokes equations and solution methods; the incompressible Euler equations and Bernoulli's equation; the streamfunction and the velocity potential; incompressible, inviscid, irrotational flow theory and solution methodology; elementary potential flows, the superposition principle and its applications to flows over solid bodies; two-dimensional incompressible, viscous boundary layer, Prandtl's theory, the Blasius solution and its application; other analytical solutions for two-dimensional viscous and inviscid incompressible channel flows.

Recommended background: thermodynamics (ES 3001, CH 3510 or equivalent), fluid dynamics (ES 3004 or equivalent).

AE/ME 3703. INTRODUCTION TO CONTROL OF DYNAMICAL SYSTEMS.

Cat. I

The course introduces the mathematical modeling and control of dynamical systems found in aerospace and mechanical engineering applications. Topics include: introduction to feedback control analysis and synthesis of linear dynamic systems; transient response analysis of first and second order systems (thermal, pneumatic, hydraulic, and mechanical); introduction to state-space modeling and representation of control systems; linearization of nonlinear systems; stability analysis using Routh's criterion and Lyapunov methods; system analysis using frequency response methods; introduction to the design of controllers in time and frequency domain. The analysis and design will be accomplished with Matlab/Simulink® software.

Recommended background: ordinary differential equations (MA 2051 or equivalent), dynamics (ES 2503, PH 2201, PH 2202 or equivalent), fluid dynamics (ES3004, AE/ME3602 or equivalent), electricity and magnetism (PH 1120 or PH 1121 or equivalent)

AE/ME 3711. AERODYNAMICS.

Cat. I

This course introduces students to the aerodynamics of airfoils, wings, and aircraft in the subsonic and supersonic regimes. Topics covered include: prediction of aerodynamic forces (lift, drag) and moments, dynamic similarity, experimental techniques in aerodynamics, Kutta-Joukowski theorem, circulation, thin airfoil theory, panel methods, finite wing theory, subsonic compressible flow over airfoils, linearized supersonic flow, and viscous flow over airfoils.

Recommended background: incompressible fluid dynamics (AE/ME 3602 or equivalent).

AE/ME 3712. AEROSPACE STRUCTURES.

Cat. I

This is a course in solid mechanics that covers stress analysis of aerospace structures. It begins with an overview of stress, strain, three-dimensional elasticity theory, and stress-strain relations for anisotropic materials. Applied topics include general torsion of solid noncircular cross sections, torsion of thin walled multi-celled members, bidirectional bending of unsymmetric cross sections, flexural shear flow in and shear center of thin walled multi-celled members, and buckling and stability of columns.

Recommended background: Stress Analysis (ES 2502 or equivalent.)

AE/ME 4710. GAS TURBINES FOR PROPULSION AND POWER GENERATION.

Cat. I

This course provides a study of open-cycle and closed-cycle gas turbines. Topics covered include: thermodynamic cycles and fluid dynamics of airbreathing gas turbines (turbojets, turbofans, turboprops), ramjets, and scramjets; thermodynamic cycles and fluid dynamics of closed-cycle gas turbines. Performance of specific engine components such as inlets, combustors, nozzles, as well as axial compressors and turbines will be addressed.

Recommended background: compressible fluid dynamics (AE/ME 3410 or equivalent).

AE/ME 4713. SPACECRAFT DYNAMICS AND CONTROL.

Cat. I

The course covers broad topics in spacecraft attitude dynamics, stability and control. The course includes a review of particle and two-body dynamics and introduction to rigid body dynamics. Orbital and attitude maneuvers are presented. Attitude control devices and momentum exchange techniques such as spinners, dual spinners, gravity gradient, and geomagnetic torques are presented. Attitude sensors/actuators are presented and the attitude control problem is introduced. Gyroscopic instruments are introduced and demonstrated in the laboratory. Open-loop stability analysis for a variety of equilibrium conditions is discussed. Control using momentum exchange and mass expulsion (thrusters) devices is discussed.

Recommended background: astronautics (ME 2713 or equivalent), dynamics (ES 2503, PH 2201 or equivalent).

AE/ME 4718. ADVANCED MATERIALS WITH AEROSPACE APPLICATIONS.

Cat. I

This course covers topics on the design, fabrication and behavior of advanced materials used in structural and propulsion components of aerospace vehicles. The design, fabrication, and properties of polymer, metal and ceramic matrix composites used in aerospace structures are presented. The fabrication and behavior of aluminum and titanium alloys used in propulsion components as well as the processing and performance of Nickel-based superalloys are also presented. The fundamentals of coatings for high temperature oxidation, hot corrosion, and thermal protection are introduced.

Recommended background: Introduction to Materials Science (ES 2001), Stress Analysis (ES 2502) or equivalent.

AE/ME 4719. ROCKET PROPULSION.

Cat. I

This course provides a study of rocket propulsion systems for launch vehicles and spacecraft. Dynamics, performance and optimization of rocket-propelled vehicles are presented. Performance and component analysis of chemical and electric propulsion systems are covered including thermochemistry of bipropellant and monopropellant thrusters. Additional topics may include advanced propulsion concepts and propellant storage and feed systems.

Recommended background: compressible fluid dynamics (AE/ME 3410 or equivalent).

AE/ME 4723. AIRCRAFT DYNAMICS AND CONTROL.

Cat. I

The goal of this course is for students to develop, analyze, and utilize models of aircraft dynamics, and to study various aircraft control systems. Topics include: review of linear systems, longitudinal and lateral flight dynamics, simulation methodologies, natural modes of motion, static and dynamic aircraft stability, and aircraft control systems (such as autopilot design, flight path control, and automatic landing). Other topics may include: vertical take-off and landing (VTOL) vehicles and rotorcraft.

Recommended background: dynamics (ES2503, PH 2201 or equivalent).

AE/ME 4733. GUIDANCE, NAVIGATION AND COMMUNICATION.*Cat. I*

This course broadly covers methods and current enabling technologies in the analysis, synthesis and practice of aerospace guidance, navigation, and communication and information systems. Topics covered include: position fixing and celestial navigation with redundant measurements, recursive navigation, and Kalman filtering; inertial navigation systems, global position systems, and Doppler navigation; orbit determination; atmospheric re-entry; communication architectures, data rates, and communication link design; tropospheric and ionospheric effects on radio-wave propagation; pursuit guidance and ballistic flight.

Recommended background: Controls (AE/ME 3703, ES 3011 or equivalent).

AE/ME 4770. AIRCRAFT DESIGN.*Cat. I*

This course introduces students to design of aircraft systems. Students complete a conceptual design of an aircraft in a term-long project. Students are exposed to the aircraft design process, and must establish design specifications, develop and analyze alternative designs, and optimize their designs to meet mission requirements. Students work together in teams to apply material learned in the areas of aerodynamics, structures and materials, propulsion, stability and control, and flight mechanics and maneuvers to the preliminary design of an aircraft. The project requirements are selected to reflect real-life aircraft mission requirements, and teams are required to design systems which incorporate appropriate engineering standards and multiple realistic constraints. The teams present their design in a final report and oral presentation.

Recommended background: fluid dynamics (ME 3410, ME 3602 or equivalent), subsonic aerodynamics (ME 3711 or equivalent), aerospace structures (ME 3712 or equivalent), airbreathing propulsion (ME 4710 or equivalent), aircraft dynamics and control (AE/ME 4723 or equivalent).

AE/ME 4771. SPACECRAFT AND MISSION DESIGN.*Cat. I*

This course introduces students to design of spacecraft and missions. Students are introduced to the process of designing a spacecraft and major subsystems to meet a specific set of objectives or needs. In addition, students will learn about different spacecraft subsystems and what factors drive their design. Particular emphasis is given to propulsion, power, attitude control, structural and thermal control subsystems. Students work together in teams to apply material learned in the areas of orbital mechanics, space environments, attitude determination and control, space structures, and propulsion to the preliminary design of a spacecraft and mission. The project requirements are selected to reflect real-life missions, and teams are required to design systems which incorporate appropriate engineering standards and multiple realistic constraints. The teams present their design in a final report and oral presentation.

Recommended background: astronautics (AE/ME 2713 or equivalent), rocket propulsion (AE/ME 4719 or equivalent), spacecraft dynamics and control (AE/ME 4713 or equivalent).

AIR FORCE AEROSPACE STUDIES

AS 1001. THE FOUNDATIONS OF THE UNITED STATES AIR FORCE I.*Cat. I (1/9 unit)*

The AS 1000 sequence of courses are designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps. Featured topics include mission and organization of the Air Force, officership and professionalism, Air Force officer opportunities, military customs and courtesies, and an introduction to communication skills.

The first course focuses on the foundation of officership and customs and courtesies.

The course includes one hour of class work and two hours of mandatory leadership laboratory per week. The AS 1001 Leadership Laboratory includes a study of Air Force customs and courtesies, drill and ceremonies, and military commands.

AS 1002. THE FOUNDATIONS OF THE UNITED STATES AIR FORCE II.*Cat. I (1/9 unit)*

The AS 1000 sequence of courses are designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps.

A continuation of AS 1001, the second course in this series emphasizes those communication skills needed in today's Air Force. It describes the communication systems as well as discusses common barriers and enhancements to effective communications. The course includes numerous speaking and written exercises using current Air Force topics.

The course includes one hour of class work and two hours of mandatory leadership laboratory per week. The AS 1002 Leadership Laboratory includes a study of Air Force customs and courtesies, drill and ceremonies, and military commands.

AS 1003. THE FOUNDATIONS OF THE UNITED STATES AIR FORCE III.*Cat. I (1/9 unit)*

The AS 1000 sequence of courses are designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps.

A continuation of AS 1002, the course outlines the origin of the Air Force and the organizational structure of the Air Force with a focus on the missions of select military organizations. The basic history of the United States military is studied in order to appreciate how military history impacts the Air Force today. Written and oral communication skills are practiced.

The course includes one hour of class work and two hours of mandatory leadership laboratory per week. The AS 1003 Leadership Laboratory includes a study of Air Force customs and courtesies, drill and ceremonies, and military commands.

AS 1004. THE FOUNDATIONS OF THE UNITED STATES AIR FORCE IV.*Cat. I (1/9 unit)*

The AS 1000 sequence of courses are designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps.

The final course in the AS 1000 sequence, it introduces students to the Air Force installation and her sister services. Written and oral communication skills are practiced.

The course includes one hour of class work and two hours of mandatory leadership laboratory per week. The AS 1004 Leadership Laboratory includes a study of Air Force customs and courtesies, drill and ceremonies, and military commands.

AS 2001. THE EVOLUTION OF USAF AIR AND SPACE POWER I.*Cat. I (1/9 unit)*

The AS 2000 sequence of courses are designed to examine general aspects of air and space power through a historical perspective. Utilizing this perspective, the course covers a time period from the first balloons and dirigibles to the space-age global positioning systems of the Persian Gulf War. Historical examples are provided to extrapolate the development of Air Force capabilities (competencies), and missions (functions) to demonstrate the evolution of what has become today's USAF air and space power. As a whole, the AS 2000 sequence of courses provides the student with a knowledge level understanding for the general element and employment of air and space power.

The first course covers the factors leading to the early development of air power through the use of air power during World War II. The development of oral and written communication skills is continued from the AS 1000 classes.

The course includes one hour of class work and two hours of mandatory leadership laboratory per week. The AS 2001 Leadership Laboratory continues a study of Air Force customs and courtesies, drill and ceremonies, military commands, and preparation for Field Training.

AS 2002. THE EVOLUTION OF USAF AIR AND SPACE POWER II.*Cat. I (1/9 unit)*

The AS 2000 sequence of courses are designed to examine general aspects of air and space power through a historical perspective. The second course in the series continues with the development of air power from World War II through the development of the Intercontinental Ballistic Missile.

The course includes one hour of class work and two hours of mandatory leadership laboratory per week. The AS 2002 Leadership Laboratory continues a study of Air Force customs and courtesies, drill and ceremonies, military commands, and preparation for field training.

AS 2003. THE EVOLUTION OF USAF AIR AND SPACE POWER III.*Cat. I (1/9 unit)*

The AS 2000 sequence of courses are designed to examine general aspects of air and space power through a historical perspective. The third course in the series begins with a study of air power in the Vietnam war through the Gulf war. Oral and written communications skills will be practiced.

The course includes one hour of class work and two hours of mandatory leadership laboratory per week. The AS 2003 Leadership Laboratory continues a study of Air Force customs and courtesies, drill and ceremonies, military commands, and preparation for field training.

AS 2004. THE EVOLUTION OF USAF AIR AND SPACE POWER IV.*Cat. I (1/9 unit)*

The AS 2000 sequence of courses are designed to examine general aspects of air and space power through a historical perspective. The course examines several fundamental truths associated with war in the third dimension: e.g. Principles of War and Tenets of Air and Space Power. As a whole, this course provides the students with a knowledge level understanding for the general element and employment of air and space power from an institutional, doctrinal and historical perspective. In addition, the students will continue to discuss the importance of the Air Force Core Values with the use of operational examples and historical Air Force leaders and will continue to develop their communication skills. The final course in the series explores the future of the Air Force through 2025.

The course includes one hour of class work and two hours of mandatory leadership laboratory per week. The AS 2004 Leadership Laboratory continues a study of Air Force customs and courtesies, drill and ceremonies, military commands, and preparation for field training.

AS 3001. AIR FORCE LEADERSHIP STUDIES I.*Cat. I (1/6 unit)*

The AS 3000 sequence of courses is a study of leadership, management fundamentals, professional knowledge, Air Force personnel and evaluation systems, leadership ethics, and communication skills required of an Air Force junior officer. Throughout the courses, case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical application of concepts being studied.

The first course explores different styles of leadership, followership, and management functions.

The course includes three hours of class work and three hours of mandatory leadership laboratory per week. The AS 3001 Leadership Laboratory complements the classroom work by providing advanced leadership experiences in officer-type activities and giving students the opportunity to apply leadership and management principles.

AS 3002. AIR FORCE LEADERSHIP STUDIES II.*Cat. I (1/6 unit)*

The AS 3000 sequence of courses is a study of leadership, management fundamentals, professional knowledge, Air Force personnel and evaluation systems, leadership ethics, and communication skills required of an Air Force junior officer. The second course studies various aspects of leadership, conflict management, counseling, and supervision.

The course includes three hours of class work and three hours of mandatory leadership laboratory per week. The AS 3002 Leadership Laboratory complements the classroom work by providing advanced leadership experiences in officer-type activities and giving students the opportunity to apply leadership and management principles.

AS 3003. AIR FORCE LEADERSHIP STUDIES III.*Cat. I (1/6 unit)*

The AS 3000 sequence of courses is a study of leadership, management fundamentals, professional knowledge, Air Force personnel and evaluation systems, leadership ethics, and communication skills required of an Air Force junior officer. The third course emphasizes teambuilding, process improvement, and military ethics.

The course includes three hours of class work and three hours of mandatory leadership laboratory per week. The AS 3003 Leadership Laboratory complements the classroom work by providing advanced leadership experiences in officer-type activities and giving students the opportunity to apply leadership and management principles.

AS 3004. AIR FORCE LEADERSHIP STUDIES IV.*Cat. I (1/6 unit)*

The AS 3000 sequence of courses is a study of leadership, management fundamentals, professional knowledge, Air Force personnel and evaluation systems, leadership ethics, and communication skills required of an Air Force junior officer. The final course explores officer professional development, and personnel and evaluation systems including practical exercises.

The course includes three hours of class work and three hours of mandatory leadership laboratory per week. The AS 3004 Leadership Laboratory complements the classroom work by providing advanced leadership experiences in officer-type activities and giving students the opportunity to apply leadership and management principles.

AS 4101. NATIONAL SECURITY AFFAIRS I.*Cat. I (1/6 unit)*

The AS 4000 sequence of courses examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Special topics of interest focus on the military as a profession, officership, military justice, civilian control of the military, preparation for active duty and current issues affecting military professionalism. Throughout the AS 4000 sequence of courses, briefing and writing exercises will be accomplished with emphasis on refining communication skills.

The first course examines in depth the national security process, principles of war and the Air Force major commands.

The course includes three hours of class work and three hours of mandatory leadership laboratory each week. The AS 4101 Leadership Laboratory complements the classroom work by providing advanced leadership experiences in officer-like activities and giving the students the opportunity to apply leadership and management principles.

AS 4102. NATIONAL SECURITY AFFAIRS II.*Cat. I (1/6 unit)*

The AS 4000 sequence of courses examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. The second course provides a detailed examination of Air Force doctrine including a study of the joint doctrine and the roles of the other military services.

The course includes three hours of class work and three hours of mandatory leadership laboratory each week. The AS 4102 Leadership Laboratory complements the classroom work by providing advanced leadership experiences in officer-like activities and giving the students the opportunity to apply leadership and management principles.

AS 4103. NATIONAL SECURITY AFFAIRS III.*Cat. I (1/6 unit)*

The AS 4000 sequence of courses examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. The third course provides an extensive study of alliances and regional security issues, including international peacekeeping and terrorism. Continued attention is given to developing the research and communications skills necessary to be successful as junior officers.

The course includes three hours of class work and three hours of mandatory leadership laboratory each week. The AS 4103 Leadership Laboratory complements the classroom work by providing advanced leadership experiences in officer-like activities and giving the students the opportunity to apply leadership and management principles.

AS 4104. PREPARATION FOR ACTIVE DUTY.*Cat. I (1/6 unit)*

The AS 4000 sequence of courses examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. The final course in the series examines officership, the military justice system, social responsibilities, current issues affecting the military profession, and various factors that will facilitate a smooth transition from civilian to military life.

The course includes three hours of class work and three hours of mandatory leadership laboratory each week. The AS 4104 Leadership Laboratory complements the classroom work by providing advanced leadership experiences in officer-like activities and giving the students the opportunity to apply leadership and management principles.

ARCHITECTURAL ENGINEERING

AREN 2023. INTRODUCTION TO ARCHITECTURAL ENGINEERING SYSTEMS.*Cat. I*

The objective of this course is to introduce the functional parts and systems that make up a building as well as their interactions in delivering required sustainable performance. It encompasses foundations, structures, building enclosures, heating and air conditioning, electrical, plumbing and fire safety systems as well as concepts of building performance and aspects of pertinent building codes and standards. This course, in addition, incorporates basic principles of building science and green construction.

AREN 3001. ARCHITECTURAL GRAPHICS AND COMMUNICATION.*Cat. I*

With this course, students develop an understanding of the architectural design process and the graphic means for communicating and exchanging design content during the execution of a building project. The course covers the following topics: Nature of design (problems, solutions and process), building siting and orientation aimed at reducing energy requirements, architectural drawings (plans, elevations and cross sections), isometric projections and detail drawings. Most of these topics build upon the systematic use of electronic modeling software. This course is lab oriented.

Recommended background: AREN 2023.

AREN 3002. ARCHITECTURAL DESIGN.*Cat. I*

This course is a continuation of AREN 3001, and is designed to further the student's knowledge in the process of architectural design through the studies of ideas, principles and methods of design. The concepts are explored with the completion of a project, including a residential or a commercial project, which at its completion, will be reviewed by invited guest critics. The course emphasizes the development of form, space, spatial relationships, materials, and architectural presentation techniques through the use of computer graphics. It introduces principles of passive approaches to reduce energy consumption. It also covers building codes in the design process.

Recommended background: AREN 3001.

AREN 3003. PRINCIPLES OF HVAC DESIGN FOR BUILDINGS.*Cat. I*

The course introduces principles and applications of mechanical systems that are required for environmental comfort, health, and safety of building occupants with a focus on energy efficiency and conservation. Topics include psychometrics, thermal comfort, building heating and cooling loads, fluid flow basics, HVAC components and systems, building envelop heat transfer, and energy requirements. In the course, students develop the ability to design and conduct computational modelling experiments and to analyze and interpret output data for selection between system alternatives in order to optimize energy use.

Recommended background: Thermodynamics.

AREN 3004. BUILDING ELECTRICAL AND LIGHTING SYSTEMS.*Cat. I*

Introduction to the energy efficiency analysis and design of electrical and illumination systems in buildings. Topics include AC, DC, single-phase and three-phase circuits, transients, electrical and lighting loads, branch circuits, panel-boards, switching, system sizing, grounding, fault calculations, over-current protection, and design and specification of emergency power backup and alternative power systems. Provides general introduction to the visual environment, including subjective and objective scales of measurement, visual perception, photometry, brightness, luminance, illumination, natural and artificial lighting. Design problems, field measurements, computer, and other models will be used to explore major topics and energy savings options. Work includes study of applicable NFPA 70 (NEC) and related building codes.

Recommended background: ECE 2010.

AREN 3006. ADVANCED HVAC SYSTEM DESIGN.*Cat. I*

Analysis of heating and cooling load requirements, considering building construction type, geometry, infiltration, occupancy effects, and daily load variations. Heating design addresses water heating systems, electrical heating, central heating, heating of low and high-rise buildings, selection of heaters, boilers, pumps, piping design. Cooling design addresses refrigerants, refrigeration cycle, evaporator, compressor, condenser, thermostatic expansion valves, refrigeration system control equipment, motor and motor control equipment, refrigeration accessories, calculation of refrigeration piping and absorption systems. Computer applications for heating and cooling load analysis will be introduced to develop energy saving solutions. Analytical techniques and building codes are discussed through case studies and design projects.

Recommended background: AREN 3003, ES 3004.

BASIC SCIENCES

GEOSCIENCES (GE)

GE 2341. GEOLOGY.*Cat. I*

Students of this course will examine the fundamental principles of physical geology including the materials, structures, and surface features of the earth and the processes which produced them. Emphasis will be placed on the interrelationship of people and environment and applications to various fields of technology. The course includes field trips and a significant laboratory component.

BIOINFORMATICS AND COMPUTATIONAL BIOLOGY

BCB 4001/BB 4801. BIOINFORMATICS.*Cat. II*

This course will provide an overview of bioinformatics, covering a broad selection of the most important techniques used to analyze biological sequence and expression data. Students will acquire a working knowledge of bioinformatics applications through hands-on use of software to ask and answer biological questions. In addition, the course will provide students with an introduction to the theory behind some of the most important algorithms used to analyze sequence data (for example, alignment algorithms and the use of hidden Markov models). Topics covered will include protein and DNA sequence alignments, evolutionary analysis and phylogenetic trees, obtaining protein secondary structure from sequence, and analysis of gene expression including clustering methods.

Recommended background: BB 2920, BB 2950, and MA 2610 or 2611.

This course will be offered in 2014-15 and in alternating years thereafter.

BCB 4002/CS 4802. BIOVISUALIZATION.*Cat. II*

This course will use interactive visualization to model and analyze biological information, structures, and processes. Topics will include the fundamental principles, concepts, and techniques of visualization (both scientific and information visualization) and how visualization can be used to study bioinformatics data at the genomic, cellular, molecular, organism, and population levels. Students will be expected to write small to moderate programs to experiment with different visual mappings and data types.

Recommended background: CS 2102, CS 2223, and one or more biology courses.

This course will be offered in 2014-15 and in alternating years thereafter.

BCB 4003/CS 4803. BIOLOGICAL AND BIOMEDICAL DATABASE MINING.*Cat. II*

This course will investigate computational techniques for discovering patterns in and across complex biological and biomedical sources including genomic and proteomic databases, clinical databases, digital libraries of scientific articles, and ontologies. Techniques covered will be drawn from several areas including sequence mining, statistical natural language processing and text mining, and data mining.

Recommended Background: CS 2102, CS 2223, MA 2610 or MA 2611, and one or more biology courses.

This course will be offered in 2013-14 and in alternating years thereafter.

BCB 4004/MA 4603. STATISTICAL METHODS IN GENETICS AND BIOINFORMATICS.*Cat. II*

This course provides students with knowledge and understanding of the applications of statistics in modern genetics and bioinformatics. The course generally covers population genetics, genetic epidemiology, and statistical models in bioinformatics. Specific topics include meiosis modeling, stochastic models for recombination, linkage and association studies (parametric vs. nonparametric models, family-based vs. population-based models) for mapping genes of qualitative and quantitative traits, gene expression data analysis, DNA and protein sequence analysis, and molecular evolution. Statistical approaches

include log-likelihood ratio tests, score tests, generalized linear models, EM algorithm, Markov chain Monte Carlo, hidden Markov model, and classification and regression trees.

Recommended background: MA 2612, MA 2631 (or MA 2621), and one or more biology courses.

This course will be offered in 2013-14 and in alternating years thereafter.

BIOLOGY AND BIOTECHNOLOGY

BB 1001. INTRODUCTION TO BIOLOGY.

Cat. I

This course consists of an overview of the major concepts of Biology, including: cell theory, bioenergetics, molecular biology, reproduction, nutrition, growth, development, homeostatic controls, and ecological issues. This course is intended for students seeking a broad overview of contemporary Biology with emphasis on human issues and current topics. Intended for non-majors.

Recommended background: high school or introductory college level chemistry.

BB 1002. ENVIRONMENTAL BIOLOGY.

Cat. I

This course provides an introduction to natural ecosystems, population growth, and the interaction between human populations and our environment. Major areas of discussion include Ecosystems, Populations, Biodiversity, Pollution, and Environmental Economics. This course is designed for students seeking a broad overview of ecological systems and the effect of humans on the ecosystems. Intended for non-majors.

Recommended background: High School biology.

BB 1025. HUMAN BIOLOGY.

Cat. I

This course presents students with an introduction to general concepts of human biology with particular focus on human structure and function. Contemporaneous issues of homeostasis, ergonomics, adaptation and health will be discussed in the context of today's emerging environmental and inter-organism impacts on the quality of life. Scientific background will underscore student opportunities to think critically, from the perspective of the human organism functioning independently, the interface between the individual and his/her immediate environment, including interactive relationships with technology, and global environment.

This course is intended for BBT and other life science majors.

Recommended background: a solid working knowledge of biological principles.

BB 1035 INTRODUCTION TO BIOTECHNOLOGY.

Cat. I

Current topics and issues in Biotechnology will be investigated. Some examples of topics which may be investigated in detail include: cloning, DNA fingerprinting and molecular forensics, transgenic organisms, "green" engineering and bioremediation, bioprocess and metabolite engineering, bioinformatics, and mathematical modeling of biological systems.

This course is intended for BBT and other life science majors.

Recommended background: a solid working knowledge of biological principles.

BB 1045 BIODIVERSITY.

Cat. I

This course is an integrated survey of the five kingdoms which stresses general concepts and economically important species. Particular attention will be paid to special structures and mechanisms evolved by selected representatives of major phyla of plants and animals for solving problems of life in various environments.

This course is intended for BBT and other life science majors.

Recommended background: a solid working knowledge of biological principles.

BB 2002. MICROBIOLOGY.

Cat. I

This course will focus on unicellular organisms with special reference to those of the domain Bacteria, and describe their taxonomy, morphology, and physiology. Special attention will be given to those organisms that are of ecological concern or serve a useful industrial purpose. The importance of microbes and viruses in public health will be presented. This course is designed for all biology majors and other students who seek a good general education in modern biology.

Recommended background: BB 1035.

BB 2030. PLANT DIVERSITY.

Cat. I

An introductory course stressing general concepts related to the vast array of plant species, taxonomic links, and uses of major plant phyla in both society and industry. Some emphasis will be given to economically important species chosen from agronomic and non-agronomic situations.

Recommended background: BB 1045.

Students may not receive credit for both BB 2030 and BB 1040.

BB 2040. PRINCIPLES OF ECOLOGY.

Cat. I

This course is designed to give the student a basis for understanding the abundance and distribution of plants and animals from the level of the individual to that of the ecosystem. Topics may include population ecology, competition, community ecology, patterns of species diversity, and energy flow.

Recommended background: BB 1045, and MA 1021-1022.

BB 2050. ANIMAL BEHAVIOR.

Cat. I

This course provides an introduction to the scientific study of animal behavior with emphasis on how and why animals behave as they do in the context of their natural environment. The behavior of animals will be analyzed from the perspective of several biological disciplines, including ecology, evolution, psychology and neurobiology. Recent research from the field and the laboratory will be used to illustrate topics such as communication, foraging, navigation, mate choice, predation, and social behavior.

BB 2550. CELL BIOLOGY.

Cat. I

This entry level course, recommended for all BIO, BC, and pre-professional majors, presents the fundamental aspects of cell structure and function, and is the foundation of all fields of modern biology.

Topics include: cell complexity and organizational hierarchy, evolution of the cell, cell surface, plasma membrane, single and double cytoplasmic membrane systems, nuclear fusion and hybridomas, cytoskeleton, cell growth, and differentiation.

Recommended background: BB 1035.

BB 2920. GENETICS.

Cat. I

This course presents the principles and experimental evidence leading to our understanding of the gene concept and the role of DNA as genetic material. Patterns of inheritance, the relationship between genotype and phenotype, and transmission, coding, and expression of genetic information are considered in a variety of organisms. A quantitative, problem-solving approach and the use of genetic analysis as a tool to study biological phenomena are emphasized throughout the course. The course is designed for all biology and pre-professional majors.

Recommended background: BB 1035.

BB 2950. MOLECULAR BIOLOGY.

Cat. I

This course will explore the molecular mechanisms by which cells use genetic information to produce RNAs and proteins. Mechanisms and regulation of transcription in both prokaryotes and eukaryotes will be studied with an emphasis on protein-protein and protein-DNA interactions. The structure, organization, evolution and expression of the eukaryotic genome will be emphasized.

Recommended background: BB 1035.

BB 3040. EXPERIMENTAL DESIGN AND DATA ANALYSIS.

Cat. II

This applied course introduces students to the design of experiments and analysis of data. We will cover a number of experimental situations occurring frequently in biology, including testing the fit of data to theoretical distributions, comparisons of groups, and regression analysis. Emphasis will be placed on formulating the hypothesis of interest, designing experiments so that the subsequent analysis will have enough power to test the hypothesis, and choosing the appropriate analysis to perform. We will discuss the importance of pilot studies, and some of the most common errors made in choosing and performing statistical tests. Both parametric and non-parametric tests will be discussed. Students will use computer packages to analyze data from the literature and/or their own experimental data.

Recommended background: MA 2610 or MA 2611, and any 3000- or 4000-level BB course.

Offered in 2014-15 and in alternating years thereafter.

Note: Students who have credit for BB 4040 may not receive credit for BB 3040.

BB 3080. NEUROBIOLOGY.*Cat. I*

An introduction to neurobiology, with emphasis on the cellular and molecular basis of neural development and function. Topics will range from electrical and biochemical signaling between neurons, to higher order functions of the nervous system, such as sensation, movement, and memory. Human neurological diseases and disorders will be discussed. Some guided reading of the primary literature will be included.

Recommended background: BB 2550, BB 2920, and BB 3101.

Students may not receive credit for both BB 4080 and BB 3080.

BB 3101. HUMAN ANATOMY & PHYSIOLOGY: MOVEMENT AND COMMUNICATION.*Cat. I*

The form and function of the systems that are responsible for the support, movement, internal communication, and interaction of the human body with its environment will be presented and discussed: Integumentary, Skeletal, Muscular, Nervous (including the senses), and Endocrine.

Recommended background: BB 1025 and BB 2550.

Suggested background: Concurrent Laboratory Module: BB 3511. Students who have received credit for BB 2130 may not take BB 3101 for credit.

BB 3102. HUMAN ANATOMY & PHYSIOLOGY: TRANSPORT AND MAINTENANCE.*Cat. I*

The form and function of the systems of the human body that provide for the intake, distribution, and processing of nutrients, water, and oxygen, and the systems that safeguard health by elimination of wastes, regulation of metabolism, and surveillance against disease will be presented and discussed. Digestive, Respiratory, Circulatory, Lymphatic, Endocrine, Urinary, and Reproductive.

Recommended Background: BB 1025 and BB 2550; CH 1010 and CH 1020.

Suggested background: Concurrent Laboratory Module: BB 3514. Students who have received credit for BB 3110 may not take BB 3102 for credit.

BB 3120. PLANT PHYSIOLOGY AND CELL CULTURE.*Cat. II*

The relationship of structure and function of multicellular plants will be examined at the biochemical level. Topics include (but are not limited to): water relations, mineral nutrition, intra- and inter-cellular transport, hormones, photosynthesis, in vitro culture of plant cells/tissues/organs, and environmental responses.

Recommended background: BB 1045, BB 2550, CH 1020.

This course will be offered in 2014-15 and in alternating years thereafter.

Some sections of this course may be offered as Writing Intensive (WI).

BB 3140. EVOLUTION: PATTERN AND PROCESS.*Cat. II*

We will explore several theoretical constructs of evolutionary processes. Topics will range from microevolutionary patterns to global extinctions and speciation. We will examine the causes of evolutionary trends from the molecular to the group level. Readings from current research into the units and levels of selection will be included.

Recommended background: BB 2550, BB 2920, at least one of (BB 1045, BB 2040).

This course will be offered in 2013-14 and in alternating years thereafter.

BB 3620. DEVELOPMENTAL BIOLOGY.*Cat. II*

This advanced level course provides a detailed survey of the processes of animal development, including fertilization, cleavage, gastrulation, and organogenesis. These processes are examined in the context of concepts such as differentiation, determination, induction, intercellular signaling, morphogenesis, and pattern formation. Emphasis is placed on current techniques for studying development, such as genetic analysis of mutations, recombinant DNA technology, molecular probing of gene expression, and gene transfer. The experimental focus is on model organisms such as nematodes, fruit flies, frogs, and mice.

Offered in 2013-14 and in alternating years thereafter.

Recommended background: BB 2002, BB 2550, BB 2920.

BB 3920. IMMUNOLOGY.*Cat. I*

This is a survey course in immunology which assumes a background in cell biology, genetics and biochemistry. Topics to be covered will include cells of the immune system, antigen/antibody immunochemistry, immunogenetics and immune responses. Readings from research literature will be assigned.

Recommended background: BB 2550, BB 2920, CH 4110, and CH 4120.

BB 4008. CELL CULTURE THEORY AND APPLICATIONS.*Cat. I*

The use of cultured animal cell systems for research and production will be explored. Concepts, including media design, the effects of extracellular matrices, scaling up of cell cultures, and biochemical and morphologic assessment of cell function, will be discussed as a basis for readings from the literature.

Recommended background: BB 2550, BB 2920, CH 4110, and CH 4120.

Students who have received credit for BB 4007 may not take BB 4008 for credit.

BB 4010. ADVANCED MOLECULAR GENETICS.*Cat. I*

Topics in molecular genetics are presented using microbial systems as models. The structure, function and synthesis of DNA and the results of mutation, recombination and repair are emphasized. Simple bacteria and their plasmids, transposable elements and phages are discussed as experimental models.

Recommended background: BB 2002, BB 2550, BB 2920.

BB 4065. VIROLOGY.*Cat. I*

This advanced-level course uses a seminar format based on research articles to discuss current topics related to the molecular/cell biology of viral structure, function, and evolution. Particular emphasis is placed on pathological mechanisms of various human disorders, especially emerging diseases, and the use of viruses in research.

Recommended background: BB 2550.

BB 4150/BB 515. ENVIRONMENTAL CHANGE: PROBLEMS & APPROACHES*Cat. II*

This seminar course will examine what is known about ecological responses to both natural and human-mediated environmental changes, and explore approaches for solving ecological problems and increasing environmental sustainability. Areas of focus may include, and are not limited to, conservation genetics, ecological responses to global climate change, sustainable use of living natural resources, and the environmental impacts of agricultural biotechnology.

Recommended background: BB 1045, BB2040, ENV1100.

This course will be offered in 2014-15 and in alternating years thereafter.

BB/CH 4190. REGULATION OF GENE EXPRESSION.*Cat. I*

This course will cover the biochemical mechanisms involved in regulation of gene expression, modifications of DNA structures that influence transcription rates, transcriptional regulation by protein binding, post-transcriptional modifications of RNA including splicing and editing, regulation of translation including ribosome binding and initiation of translation, and factors that control the half-lives of both mRNA and protein. During the course, common experimental methods will be explored, including a discussion of the information available from each method.

Recommended background CH 4110, CH 4120, CH 4130, BB 4010

BB 4550. ADVANCED CELL BIOLOGY.*Cat. I*

This advanced-level course uses a seminar format based on research articles to discuss current topics related to the molecular biology of cellular function. Particular emphasis is placed on biological mechanisms of autoimmune disorders, Alzheimers disease, DNA vaccines, stem cells, animal cloning, neurotropic factors, and gene therapy.

Recommended background: BB 2550.

BB 4801/BCB 4001. BIOINFORMATICS.*Cat. II*

This course will provide an overview of bioinformatics, covering a broad selection of the most important techniques used to analyze biological sequence and expression data. Students will acquire a working knowledge of bioinformatics applications through hands-on use of software to ask and answer biological questions. In addition, the course will provide students with an introduction to the theory behind some of the most important algorithms used to analyze sequence data (for example, alignment algorithms and the use of hidden Markov models). Topics covered will include protein and DNA sequence alignments, evolutionary analysis and phylogenetic trees, obtaining protein secondary structure from sequence, and analysis of gene expression including clustering methods.

Recommended background: BB 2920, BB 2950, and MA 2610 or 2611.

This is being offered in 2014-15 and in alternating years thereafter.

IS4 BB. SPECIAL TOPICS.*Cat. I*

Experimental courses, special conferences and seminars are offered by advance arrangement only.

BIOLOGY AND BIOTECHNOLOGY LAB COURSES**BB 2901. MOLECULAR BIOLOGY, MICROBIOLOGY, AND GENETICS.***Cat. I (1/6 unit)*

The lab exercises in this course are designed to provide foundation skills needed for the study of living organisms and systems at the both the organismal and molecular scales. Students will gain experience with procedures, equipment, techniques and skills common to all areas of biology. In particular this course will focus on:

- The use and identification of bacteria in the laboratory
 - Handling- Restriction digestion- and visualization- of DNA
 - Plasmid purification and cloning
 - Examples of classic genetics
- Recommended background: BB 1035.

BB 2902. ENZYMES, PROTEINS, AND PURIFICATION.*Cat. I (1/6 unit)*

The lab exercises in this course are designed to provide foundation skills needed for the study of living organisms and systems at the both the organismal and molecular scales. Students will gain experience with procedures, equipment, techniques and skills common to all areas of biology. In particular this course will focus on:

- The action and optima of enzyme action
 - Quantification and detection techniques for proteins
 - Extraction and purification of protein from biological material
- Recommended background: BB 1035.

BB 2903. ANATOMY AND PHYSIOLOGY.*Cat. I (1/6 unit)*

The lab exercises in this course are designed to provide foundation skills needed for the study of living organisms and systems at the both the organismal and molecular scales. Students will gain experience with procedures, equipment, techniques and skills common to all areas of biology. In particular this course will focus on:

- Comparative and general anatomy of several organisms
 - Physiology and function of body systems, processes and organs.
- Recommended background: BB 1025.

BB 2904. ECOLOGY, ENVIRONMENT, AND ANIMAL BEHAVIOR.*Cat. I (1/6 unit)*

The lab exercises in this course are designed to provide foundation skills needed for the study of living organisms and systems at the both the organismal and molecular scales. Students will gain experience with procedures, equipment, techniques and skills common to all areas of biology. In particular this course will focus on:

- Observing, recording, understanding, and analyzing animal behaviors
 - Environmental and Ecological assessment and sampling
 - Observations of population dynamics
- Recommended background: BB 1045.

BB 3511. NERVE AND MUSCLE PHYSIOLOGY.*Cat. I (1/6 unit)*

Computer and laboratory studies of nerve and muscle function.
Recommended background: BB 2903.
Concurrent or prior registration in BB 3101 is recommended.

BB 3512. MOLECULAR GENETICS LAB.*Cat. I (1/6 unit)*

The topic of gene therapy will be used to familiarize the student with computer cloning and manipulations of biological sequence information.
Recommended background: BB 2920, BB 2550 and CH 4130.

BB 3513. CELL CULTURE TECHNIQUES FOR ANIMAL CELLS.*Cat. I (1/6 unit)*

Basic laboratory skills in mammalian cell culture to include cell counting, freezing and thawing cell lines, culture of suspension and attached cells.
Recommended background: BB 2901, BB 2550 and knowledge of aseptic techniques.
Concurrent or prior registration in BB 4008 is recommended.

BB 3514. CIRCULATORY AND RESPIRATORY PHYSIOLOGY.*Cat. I (1/6 unit)*

Computer and laboratory studies of circulatory and respiratory physiology.
Recommended background: BB 2903.
Concurrent or prior registration in BB 3102 is recommended.

BB 3516. SEPARATION TECHNIQUES IN BIOTECHNOLOGY.*Cat. I (1/6 unit)*

A laboratory course in chromatographic and electrophoretic separation of proteins; plasmid isolation, restriction digestion and electrophoretic separation of DNA.
Recommended background: BB 2902.
Concurrent or prior registration in Biochemistry (CH 4110) is recommended.

BB 3517. FERMENTATION.*Cat. I (1/6 unit)*

An introductory laboratory course in basic fermentation techniques.
Recommended background: BB 2901, BB 2002, and knowledge of aseptic techniques.
Concurrent or prior registration in BB 3055 is suggested.

BB 3518. MOLECULAR BIOLOGY.*Cat. I (1/6 unit)*

Laboratory investigations of select molecular characteristics of proteins and DNA.
Recommended background: BB 2901, BB 2550, and CH 4110.
Concurrent, or prior registration in CH 4130 is recommended.

BB 3519. PROTEIN PURIFICATION.*Cat. I (1/6 unit)*

A laboratory course in protein purification techniques.
Recommended background: BB 2902, CH 4110.

BB 3520. RECOMBINANT DNA TECHNOLOGY.*Cat. I (1/6 unit)*

A laboratory course in the construction, isolation and mapping of recombinants, and use of the polymerase chain reaction.
Recommended background: BB 2901, BB 2550, and CH 4110.
Concurrent or prior registration in BB 4955 is recommended.

BB 3521. MICROSCOPY.*Cat. I (1/6 unit)*

A laboratory course in the theory and operation of light and electron microscopes, including specimen preparation, operation of equipment, and microphotography.
Recommended background: BB 2901 and BB 2550.
Some sections of this course may be offered as Writing Intensive (WI).

BB 3524. BIOINFORMATICS LAB.*Cat. I (1/6 unit)*

Laboratory course investigating some of the basic tools currently available for sequence data mining, comparison of nucleotide and/or protein sequences, and the analysis of nucleotide and protein sequences. Course will be computer based.
Recommended background: BB 2920, BB 2901, and CH 4110.
Concurrent or prior registration in CH 4130 is recommended.
Students who have received credit for BB 324X may not receive credit for BB 3524.

BB 3525. PLANT PHYSIOLOGY.*Cat. I (1/6 unit)*

Basic studies in the biochemical and physical systems plants use to sustain life; includes an introduction to plant cell culture techniques.
Recommended background: BB 1045 and BB 2903.
Concurrent or prior registration in BB 3120 is recommended.
Students who have received credit for BB 325X may not receive credit for BB 3525.

Graduate Biology and Biotechnology Courses of Interest to Undergraduates

The following courses are open to advanced undergraduates with special written permission of the course instructor and department head.

BB 501. SEMINAR.

BB 509. SCALE-UP OF BIOPROCESSING.

Strategies for optimization of bioprocesses for scale-up applications. In addition to the theory of scaling up unit operations in bioprocessing, students will scale-up a bench scale bioprocess (5 liters) including fermentation and downstream processing to 55 liters. Specific topics include the effects of scaling-up on: mass transfer and bioreactor design, harvesting techniques including tangential flow filtration and centrifugation, and chromatography (open column and HPLC).

Recommended courses include BB 3055 Microbial Physiology and BB 4070/560 Separations of Biological Molecules, as a working knowledge of the bench scale processes will be assumed. Otherwise, instructor permission is required.

BB 542. ECOLOGICAL SIMULATION MODELING.

This course will cover computer simulation modeling of populations, bioenergetics, behavior of individuals, and ecosystem dynamics. Modeling techniques covered will range from simple linear models of populations and interactions between ecosystem components to individual-based models of populations in complex environments. Students successfully completing the course should be capable of understanding models used in today's study of populations and ecosystems and of developing original models. Knowledge of a programming language is assumed.

BB 560. SEPARATION OF BIOLOGICAL MOLECULES.

This course provides a detailed hands-on survey of state-of-the-art methods employed by the biotechnology industry for the purification of products, proteins in particular, from fermentation processes. Focus is on methods which offer the best potential for scale-up. Included are the theory of the design as well as the operation of these methods both at the laboratory scale as well as scaled up. It is intended for biology, biotechnology, chemical engineering, and biochemistry students. A knowledge of basic biochemistry is assumed.

BB 565. VIROLOGY.

This advanced-level course uses a seminar format based on research articles to discuss current topics related to the molecular/cell biology of viral structure, function, and evolution. Particular emphasis is placed on pathological mechanisms of various human disorders, especially emerging diseases, and the use of viruses in research.

BB 570. SPECIAL TOPICS.

Specialty subjects are offered using the research expertise of the department faculty. Content and format varies to suit the interest and needs of the faculty and students. This course may be repeated for different topics covered.

BB 575. ADVANCED GENETICS & CELL BIOLOGY.

Topics in this course focus on the basic building blocks of life; molecules, genes and cells. The course will address areas of the organization, structure, function and analysis, of the genome and of cells. Required Background: Students in the course should be familiar with the fundamentals of recombinant DNA and molecular biological techniques as well as cell biology.

BB 576. ADVANCED INTEGRATIVE BIOSCIENCE.

This course concentrates on the organization of cells into biological systems and into individual organisms. Discussion will center on the development and function of specific model systems such as the nervous and immune systems. Required background: Students in the course should be familiar with the fundamentals of developmental biology, genetics and cell biology.

BB 577. ADVANCED ECOLOGICAL & EVOLUTIONARY BIOSCIENCE.

This course will explore the organization of individuals into communities, and the evolution of individual traits and behaviors. Problems discussed will range from those of population harvesting and the effect humans have on the environment to the evolution of disadvantageous traits. Required background: Students should be familiar with fundamentals of population interactions, evolution and animal behavior.

BB 578. ADVANCED APPLIED BIOTECHNOLOGY.

This course examines the use of biotechnological advances towards solving real world problems. Students will discuss problem-solving strategies from the current literature in the areas of medicine, agriculture, environmental protection/restoration and industrial biotechnology. Required background: Students should be familiar with biochemistry, microbiology, and plant and animal physiology.

BIOMEDICAL ENGINEERING

The second digit for Biomedical Engineering course numbers is coded as follows:

- 0 — Bioinstrumentation, Biosignals, Introduction
- 1 — Physiology
- 2 — Bioelectric, Bioimaging
- 3 — Design
- 5 — Biomechanics, Biological Systems
- 6 — Biofluids
- 8 — Biomaterials

NOTE: Courses listed in previous catalogs with "BE" as the prefix and the same course number as below are considered to be the SAME COURSE.

BME 1001. INTRODUCTION TO BIOMEDICAL ENGINEERING.

Cat. I

Lectures, demonstrations, hands-on experimentation, and scientific literature readings in the major branches of biomedical engineering. A series of laboratory demonstration/experiments are utilized to complement key concepts covered in various lectures.

BME 2210. BIOMEDICAL SIGNALS, INSTRUMENTS AND MEASUREMENTS.

Cat. I

This course is an introduction to the instrumentation methods used to measure, store and analyze the signals produced by biomedical phenomena. The goal of this course is to familiarize students with the basic design and implementation of techniques for measuring a broad scope of signal types for molecular, cellular and physiological research. Sensors used for acquiring electrical, magnetic, optical/spectral and chemical signals will be covered. Topics include the underlying physics and chemistry of biomedical signals, biosensor types and usage, amplification and signal conditioning, data acquisition methods, and sources of artifact and noise.

Recommended background: PH 1120/21, CH 1010 or equivalent.

BME 2211. BIOMEDICAL DATA ANALYSIS.

Cat. I

To learn the fundamentals of basic signal processing methods as well as linear time series analyses framework for modeling and mining biological data. Tools of data analysis include statistics for determining significance of a result, Laplace and Z transforms, convolution, correlation, sampling theorem, Fourier transform, transfer function, coherence function and various filtering techniques. The goal of this course is to offer the students an opportunity to learn and model and simulate static and dynamic physiological systems using linear systems theory. First principles of chemistry and physics are used to quantitatively model physiological systems. Most of the models are based on linear systems theory. Simulations and estimation are performed using Matlab and already-developed software.

Recommended background: BME 2210, CS 1101 or equivalent.

BME 2511. INTRODUCTION TO BIOMECHANICS AND BIOTRANSPORT.

Cat. I

This course is an introduction to the analysis of physiological systems using principles of biomechanics including statics, stress analysis, and transport phenomena. Basic theories of static equilibrium, stress analysis, momentum transport, mass transport and energy transport are presented and applied to cellular and mammalian physiology. Principles of biomechanics transport phenomena are also applied to the design of medical devices and bioengineered tissues. Topics include forces, moments, free body diagrams, principal stresses, viscoelasticity, differential and integral balances, rheology of Newtonian and non-Newtonian fluids, diffusion in non-reacting binary systems.

Recommended background: MA 2501, PH 1120 or PH 1121.

Students who have previously received credit for BME 2504 or BME 2604 may not receive credit for BME 2511.

Some sections of this course may be offered as *Writing Intensive (WI)*.

BME 2811. INTRODUCTION TO BIOMATERIALS SCIENCE AND TISSUE ENGINEERING.

Cat. I

This course provides an introduction to the characterization, analysis and design of biomaterials for the purposes of correcting deformities, restoring lost function or promoting tissue regeneration in the human body. The principles of materials science, specifically the fundamental structure-function relationships of biomaterials will be explored, as they relate to the use of materials in the body. The course will also examine properties of biomaterials as they relate to

minimizing corrosion, controlling degradation and tailoring cell-material interaction to guide cell growth and tissue regeneration. Topics include structural properties of materials, characterization of materials, tissue responses to implants and designing materials for tissue engineering. Recommended background: PH 1110, CH 1110, BB 2550, ES2001 or equivalent.

BME 3111. PHYSIOLOGY AND ENGINEERING.

Cat. I

This course provides students with an understanding of mammalian physiology and the engineering aspects of different physiological systems. The course will have both a lecture and laboratory portion. The laboratory portion will provide the students with the ability to analyze and interpret data from living systems, which is a required ABET program criteria for student majoring in Biomedical Engineering. The course will focus on a number of organ systems that may include cardiovascular, respiratory, and renal. Engineering principles that include biomechanical, bioelectrical, and biofluids will be applied to physiological systems.

Recommended background: A knowledge of biomechanics (BME 2504), biological transport (BME 2604) and bioelectric foundations (BME 2204).

BME 3300. BIOMEDICAL ENGINEERING DESIGN.

Cat. I

Students are guided through the open-ended, real-world, design process starting with the project definition, specification development, management, team interactions and communication, failure and safety criteria, progress reporting, marketing concepts, documentation and technical presentation of the final project outcome. The course will include a significant writing component, will make use of computers, and hands-on design explorations.

Students who have previously received credit for BME 2300 may not receive credit for BME 3300.

BME/ECE 4011. BIOMEDICAL SIGNAL ANALYSIS.

Cat. II

Introduction to biomedical signal processing and analysis. Fundamental techniques to analyze and process signals that originate from biological sources: ECGs, EMGs, EEGs, blood pressure signals, etc. Course integrates physiological knowledge with the information useful for physiologic investigation and medical diagnosis and processing. Biomedical signal characterization, time domain analysis techniques (transfer functions, convolution, auto- and cross-correlation), frequency domain (Fourier analysis), continuous and discrete signals, deterministic and stochastic signal analysis methods. Analog and digital filtering.

Recommended background: ECE 2311, ECE 2312, or equivalent.

This course will be offered in 2014-15, and in alternating years thereafter.

BME/ECE 4023. BIOMEDICAL INSTRUMENTATION DESIGN.

Cat. II

This course builds on the fundamental knowledge of instrumentation and sensors. Lectures cover the principles of designing, building and testing analog instruments to measure and process biomedical signals. The course is intended for students interested in the design and development of electronic bioinstrumentation. Emphasis is placed on developing the student's ability to design a simple medical device to perform real-time physiological measurements.

Recommended background: BME 3012, BME 3013, ECE 2010 and ECE 2019.

This course will be offered in 2014-15, and in alternating years thereafter.

BME 4201. BIOMEDICAL IMAGING.

Cat. II

This course is a practical introduction to biomedical image processing using examples from various branches of medical imaging. Topics include: point operations, filtering in the image and Fourier domains, image reconstruction in computed tomography and magnetic resonance imaging, and data analysis using image segmentation. Review of linear-systems theory and the relevant principles of physics. Course work uses examples from microscopy, computed tomography, X-ray radiography, and magnetic resonance imaging. A working knowledge of undergraduate signal analysis and linear algebra is desirable. Facility with a high-level programming language is recommended.

The course will be offered in 2014-15, and in alternating years thereafter.

BME 4300. MQP CAPSTONE DESIGN.

Cat. I (1/6 unit)

This course guides students through the engineering design process during the first term of their MQP to aid them in fulfilling their capstone design requirement. The course focuses on developing a revised client statement based on the objectives, constraints, and functions of the design. Methods for concept

generation, concept selection and development strategy will be covered. In addition, project planning tools, business plans, ethics, and design for manufacturability and sustainability will be covered.

Recommended background: Principles of engineering design such as BME 3300 or equivalent. Course should be taken concurrently with the MQP. Students who have taken BME 430X cannot get credit for BME 4300. BME 4300 cannot be used to fulfill graduate degree requirements.

BME/ME 4504. BIOMECHANICS.

Cat. II

This course emphasizes the applications of mechanics to describe the material properties of living tissues. It is concerned with the description and measurements of these properties as related to their physiological functions. Emphasis on the interrelationship between biomechanics and physiology in medicine, surgery, body injury and prostheses.

Topics covered include: Review of basic mechanics, stress, strain, constitutive equations and the field equations, viscoelastic behavior, and models of material behavior. The measurement and characterization of properties of tendons, skin, muscles and bone. Biomechanics as related to body injury and the design of prosthetic devices.

Recommended background: Mechanics (ES 2501, ES 2502, ES 2503, ME 3501), Mathematics (MA 2051).

This course will be offered in 2013-14, and in alternating years thereafter.

BME/ME 4606. BIOFLUIDS.

Cat. II

This course emphasizes the applications of fluid mechanics to biological problems. The course concentrates primarily on the human circulatory and respiratory systems. Topics covered include: blood flow in the heart, arteries, veins and microcirculation and air flow in the lungs and airways. Mass transfer across the walls of these systems is also presented.

Recommended background: ME 3501 and fluid mechanics equivalent to ES 3004.

This course will be offered in 2014-15, and in alternating years thereafter.

BME 4701. CELL AND MOLECULAR BIOENGINEERING.

Cat. I

This course examines the principles of molecular and cell biology applied to the design of engineered molecules, cells and tissues. Topics will include the basic structural, chemical and physical properties of biomolecules (proteins, lipids, DNA and RNA), application of biomolecules to monitor and alter cellular processes in vitro and in vivo, and design considerations for engineering cell and molecular therapeutics. Case studies will be used to examine specific applications of molecular and cellular bioengineering technologies to treat disease and promote tissue repair and regeneration.

Recommended background: Cell biology (BB 2550). Additional coursework in molecular biology (BB 2950) and/or genetics (BB 2920) would be beneficial.

Students who earned credit for BME 37XX cannot receive credit for BME 4701.

BME/ME 4814. BIOMATERIALS.

Cat. I

A course discusses various aspects pertaining to the selection, processing, testing (in vitro and in vivo) and performance of biomedical materials. The biocompatibility and surgical applicability of metallic, polymeric and ceramic implants and prosthetic devices are discussed. The physico-chemical interactions between the implant material and the physiological environment will be described. The use of biomaterials in maxillofacial, orthopedic, dental, ophthalmic and neuromuscular applications is presented.

Recommended background: BB 3130 or equivalent introduction to Human Anatomy, ES 2001 or equivalent introduction to Materials Science and Engineering.

BME 4828. BIOMATERIALS-TISSUE INTERACTIONS.

Cat. I

This course examines the principles of materials science and cell biology underlying the design of medical devices, artificial organs and scaffolds for tissue engineering. Molecular and cellular interactions with biomaterials are analyzed in terms of cellular processes such as matrix synthesis, degradation and contraction. Principles of wound healing and tissue remodeling are used to study biological responses to implanted materials and devices. Case studies will be analyzed to compare tissue responses to intact, bioresorbable and bioerodible biomaterials. Additionally, this course will examine criteria for restoring physiological function of tissue and organs and investigate strategies to design implants and prostheses based on control of biomaterial-tissue interactions.

Recommended background: BB 2550 or equivalent, ES 2001 or equivalent, PH 1110 or PH 1111.

BIOMEDICAL ENGINEERING LAB COURSES

BME 3012. BIOMEDICAL SENSORS LABORATORY.*Cat. I (1/6 unit)*

This laboratory-based course is designed to develop hands-on experimental skills relevant to the selection and application of various sensors used to acquire biomedical signals.

Recommended background: BME 2210, BME 2211, ECE 2010, ECE 2019 or equivalent.

Students who have previously taken BME 3011 cannot receive credit for this course.

BME 3013. BIOMEDICAL INSTRUMENTATION LABORATORY.*Cat. I (1/6 unit)*

This laboratory-based course is designed to develop hands-on experimental skills relevant to the design and application of analog instrumentation commonly used to acquire biomedical signals.

Recommended background: BME 2210, BME 2211, ECE 2010, ECE 2019 or equivalent.

Students who have previously taken BME 3011 cannot receive credit for this course.

BME 3014. SIGNAL PROCESSING LABORATORY.*Cat. I (1/6 unit)*

This course is an introduction to the computational methods used to extract and analyze the signals produced by biomedical phenomena. The goal of this course is to familiarize the student with implementing the most common algorithmic approaches for data analysis used in biomedical engineering. Coursework will cover programming for topics such as peak detection, spectral analysis and the fast Fourier transform FFT method, auto-regression analysis, polynomial trend removal, and signal filtering methods.

Recommended background: BME 2211, CS 1101 or equivalent.

BME 3503. SKELETAL BIOMECHANICS LABORATORY.*Cat. I (1/6 unit)*

This laboratory course will help students increase their knowledge of the mechanics of the musculoskeletal system. Students will gain understanding of the course materials and technical skills through the combined hands-on application of state-of-the-art biomechanical testing equipment and computer simulation modules towards solving authentic problems involving balance, strength, and movement.

Recommended background: Statics (ES 2501) and dynamics (ES 2503).

Students who have previously taken BME3504 cannot receive credit for this course.

BME 3505. BONE BIOMECHANICS LAB.*Cat. I*

This laboratory-driven solid biomechanics course provides hands-on experience in characterizing the mechanical properties of bone and the performance of fracture fixation devices. Students gain an in-depth understanding of the course material from personal observations and measurements on actual bones, screws, and plates using industry-standard testing equipment. A challenge-based laboratory project will be assigned which will require the students to determine and execute effective test methods at their own pace in a team setting and communicate their findings effectively.

Recommended background: A knowledge of mechanics of materials (ES2502) and material science (ES 2001).

Students who have previously taken BME3504 cannot receive credit for this course.

BME 3506. TISSUE BIOMECHANICS LABORATORY.*Cat. I (1/6 unit)*

This laboratory-driven solid biomechanics course provides hands-on experience in characterizing the mechanical properties of hard or soft biological tissues depending upon student interest. Students gain an in-depth understanding of the course material from personal observations and measurements on actual soft or hard tissues using industry-standard testing equipment. A challenge-based laboratory project will be assigned which will require the students to determine and execute effective test methods at their own pace in a team setting and communicate their findings effectively. Tissues tested may include blood vessels, cartilage, bone, tendons, skin, and muscle.

Recommended background: Mechanics of materials (ES2502) and material science (ES 2001).

Students who have previously taken BME3504 cannot receive credit for this course.

BME 3605. BIOTRANSPORT LABORATORY.*Cat. I (1/6 unit)*

This laboratory-driven transport course provides hands-on experience in measuring heat, flow, and transport in biologically-relevant systems. Students gain an in-depth understanding of the course material from personal observations and measurements on model cardiovascular systems and connective tissues. Challenge-based laboratory projects will be assigned which will require the students to determine and execute effective test methods at their own pace in a team setting and communicate their findings effectively. Systems modeled may include blood vessels, stenotic vessels, and aneurysms. Connective tissues tested may include blood vessels and skin.

Recommended background: Heat transfer, fluid mechanics, and transport (BME2511 and ES3002, ES3003, or ES3004 or equivalent).

BUSINESS, SCHOOL OF

ACCOUNTING (ACC)

ACC 1100. FINANCIAL ACCOUNTING.*Cat. II*

This course provides a tool for business communication, as accounting is an important language of business. Students are introduced to the accounting process, its underlying concepts, and the techniques of preparing and analyzing financial statements. Students are also introduced to issues in accounting for assets, liabilities, and stockholders' equity. The course demonstrates the employment of accounting data by users outside the firm, and the application of accounting numbers in financial analyses and market decisions.

This course will be offered in 2014-15 and in alternating years thereafter.

ACC 2101. MANAGEMENT ACCOUNTING.*Cat. II*

This course is intended to familiarize the student with the wide variety of ways in which accounting data are used by management as a tool for the attainment of predetermined organizational objectives. The emphasis of the course is on the application of accounting data, rather than on its preparation, and particular attention is given to the use of financial data both in controlling day-to-day activities and planning future operations. Principal topics include: master budgets, cost analysis and classification systems, cost-volume-profit analysis, standard cost accounting and an introduction to capital budgeting.

Recommended background: ACC 1100.

This course will be offered in 2014-15 and in alternating years thereafter.

ACC 4200. MANAGING PERFORMANCE: INTERNAL AND INTER-ORGANIZATIONAL PERSPECTIVES.*Cat. II*

Managing supply chains is recognized as a critical factor for success among many firms, and may be a source of competitive advantage. This course will adopt a management accounting perspective to help managers plan, analyze, and manage the performance of their firm and their supply chain. Three types of topics will be presented: theoretical perspectives, such as transaction cost economics, agency, and goal setting theories; performance measurement, such as financial and non-financial performance measures of the firm and its suppliers; and performance management and challenges, such as strategic cost management, incentives, and total cost of ownership.

Recommended background: BUS 2060.

This course will be offered in 2013-14 and in alternating years thereafter.

BUSINESS (BUS)

BUS 1010. LEADERSHIP PRACTICE.*Cat. I*

Leadership is a critical role in any global, technological organization. This course explores how the concepts of creativity, entrepreneurial and critical thinking, emotional and self-awareness, passion, diversity, communication, and ethics inform and affect leadership practice. The course considers a variety of contemporary leadership challenges including how leaders work effectively across cultural, technological, and disciplinary boundaries, how leaders foster new ideas and bring them to fruition, how they communicate effectively and persuasively to diverse stakeholders, and how they make decisions that are both ethical and effective. The course is designed to 1) increase students' awareness of their own leadership styles, 2) examine the responsibilities of leadership, and 3) determine best practices in leadership.

BUS 1020. GLOBAL ENVIRONMENT OF BUSINESS DECISIONS.*Cat. I*

The global nature of business is indisputable. This course introduces the students to the complexity of the global environment and adopts a multi-dimensional view (cultural, economic, social, legal, political, and technological) of world economy. It promotes understanding the global environment as integrative forces affecting the success or failure of today's businesses and fosters a global perspective. Topics may include an overview of the world economy, comparative advantage and international trade, cultural distance, FDI/globalization theory, outsourcing and global supply chain coordination, political and country risk, the global monetary system and currency risk, legal and ethical issues, and risk management.

BUS 2020. THE LEGAL ENVIRONMENT OF BUSINESS DECISIONS.*Cat. I*

This course addresses the impact of law on business. The course covers fundamental areas of business law, such as torts, contracts, intellectual property, and legal forms of business organizations, and their effects on business decisions. Particular attention is paid to technology-based enterprises where global business issues intersect with law.

Students may not receive credit for both BUS 2020 and BUS 2950.

BUS 2060. FINANCIAL STATEMENTS FOR DECISION MAKING.*Cat. I*

This course provides students with an understanding of the primary financial statements used for internal and external business decision-making in start-up firms and large corporations. It emphasizes underlying accounting concepts captured in financial statements, while highlighting the interdependence among these statements. The course will cover analytical techniques, such as ratio analyses and sensitivity analyses to assess the impact of changes in strategy and outcomes on efficiency and effectiveness measures. It also describes the various users of internal and external financial statements, and the potential conflicts between these various stakeholders.

BUS 2070. RISK ANALYSIS FOR DECISION MAKING.*Cat. I*

Financial and operational risks are omnipresent in small entrepreneurial enterprises and in the corporate world. All firms, large and small, must be able to manage risk to create value. This course introduces students to enterprise risk and prepares them to act in the presence of risk. The course will sensitize students to two significant types of risk (namely, financial and operational risk), provide students with tools for assessing risk and minimizing risk exposure, and prepare students to take risk into account when making decisions as leaders, managers, and individuals.

BUS 2080. DATA ANALYSIS FOR DECISION MAKING.*Cat. I*

This course explores the use of data mining and analytics to create business intelligence and use it for improving internal operations and understanding customers and supply chains. It provides an introduction to the concepts and methods of data analysis for decision-making. Students will learn a comprehensive set of spreadsheet skills and tools, including how to design, build, test, and use spreadsheets for business analyses. Students will also develop an understanding of the uses of business data analyses for decision-making, forecasting, and obtaining and maintaining a competitive advantage.

BUS 3010. CREATING VALUE THROUGH INNOVATION.*Cat. I*

This course focuses on the ways value can be created and captured through innovation. Focusing on the assessment of customers, organizational capabilities, and competition, students will consider a variety of different types of innovations and their associated ethical and financial value propositions. Students will learn analytic tools to successfully assess and commercialize technology, product, and service innovations in a variety of contexts.

Students may not receive credit for both BUS 3010 and MIS 3700.

BUS 3020. ACHIEVING EFFECTIVE OPERATIONS.*Cat. I*

Operations are embedded in a constantly changing network of relationships with various stakeholders including customers and suppliers. Within the organization, scarce resources (including financial, human, and technological) need to be ethically allocated and aligned with strategic goals. This course focuses on process analysis, design, and implementation within the constraints of stakeholder networks and available resources.

Students may not receive credit for both BUS 3020 and OIE 3400.

BUS 4030. ACHIEVING STRATEGIC EFFECTIVENESS.*Cat. I*

Every successful business has a strategy for how it provides value and earns profit within its particular industry. Focusing on the contexts of technology, innovation and entrepreneurship, this course develops analytic approaches for assessing the various aspects of strategy such as the competitive environment, the network of stakeholders, ethical implications, investor motivation, operational execution, and financial projections that are necessary to create a complete business plan.

This class is optimally taken while the MQP is in progress.

BUS 4300. SENIOR SEMINAR.*Cat. I*

This course is designed for the senior student who wishes to acquire or strengthen important skills needed for organizational success. Among the subjects covered is power in organizations, what it is, and how to acquire and appropriately use it. Additionally, this course emphasizes presentation skills, organizational etiquette, cross-cultural communication, and the knowledge of current events. The student will be expected to be familiar with and use all forms of media information for both individual and group projects. The course may be counted as a 4000-level elective for MG, MGE, or MIS, or as a Free Elective for any student at WPI.

Recommended Background: Senior standing.

ENTREPRENEURSHIP (ETR)

ETR 1100. ENGINEERING INNOVATION AND ENTREPRENEURSHIP.*Cat. I*

In the modern competitive and global world confronting today's engineers, innovation and entrepreneurship (I&E) are increasingly important perspectives for every engineering career. Individuals proficient in I&E are likely to possess unique competitive advantage over those who do not. This course develops the foundation for developing such proficiency by examining the functional roles of the business/commercial aspects of engineering disciplines as well as establishing a basis for innovative thinking. Specific cases where I&E has led to new products innovation and new enterprise development will supplement course materials.

Recommended background: None.

ETR 3633. ENTREPRENEURIAL SELLING.*Cat. I*

Selling is a major part of business life, but it is especially important for those who are launching a new venture. They need to sell their business plan to potential investors. Later they need to sell their product or service to a customer. Ultimately they need to create an organization that is focused on meeting customer and other stakeholder needs through effective selling disciplines. This course will examine the elements of the sales cycle in terms of preparation, market research, prospecting, objection handling, closing, techniques for motivating the sales professional and formulation of strategy for the successful selling transaction. As part of the course students will be required to prepare individual sales presentations, one to secure investment for a new venture and one to sell a product or service to a customer. Guest speakers may be used on topics such as sales coaching, inside sales management, and to deliver sales effectiveness training.

ETR 3910. RECOGNIZING AND EVALUATING NEW VENTURE OPPORTUNITIES.*Cat. I*

This course focuses on identifying ideas for new businesses and learning how to evaluate those ideas to determine if they are feasible. Using various opportunity recognition models, students will be expected to come up with a business idea and conduct an analysis of the feasibility of the venture and its fit with the founder.

Recommended background for this course consists of OIE 2850 and two of the following: ACC 1100, BUS 2060, BUS 2950, **or** BUS 2020, BUS 4030, MIS 3700, **or** BUS 3010, MKT 3600, OIE 3400, **or** BUS 3020.

ETR 3920. PLANNING AND LAUNCHING NEW VENTURES.*Cat. I*

This course focuses on business plan development, especially the financial aspects of the plan. The intent is that students will use a feasibility analysis, such as the one completed in ETR 3910, and turn that into a complete business plan. Additionally, students will learn about seed capital, venture, and other means of financing new ventures.

Recommended background for this course consists of ETR 3910, OIE 2850 and two of the following: ACC 1100, BUS 2060, BUS 2950 **or** BUS 2020, BUS 4030, MIS 3700 **or** BUS 3010, MKT 3600, OIE 3400 **or** BUS 3020.

ETR 4930. GROWING AND MANAGING NEW VENTURES.

Cat. I

One of the most troublesome aspects of entrepreneurship is running the business once it is started. This course focuses on techniques to grow the new venture and how to manage both the growth and operations. Considerable emphasis will be placed on expanding existing markets, finding new markets, anticipating the next generation of products, and managing cash flow.

Recommended background for this course consists of five of the following: ACC 1100, ACC 2101, BUS 1010, BUS 1020, BUS 2060, BUS 2950 **or** BUS 2020, BUS 4030, ETR 3910, ETR 3920, MIS 3700 **or** BUS 3010, MKT 3600, OBC 2300, OIE 2850, OIE 3400 **or** BUS 3020.

FINANCE (FIN)

FIN 1250. PERSONAL FINANCE.

Cat. I

This course is designed to help the student make well-informed judgments when faced with personal financial decisions. Such decisions are growing in number and complexity, and both individuals and families need a considerable degree of financial expertise in order to utilize optimally their limited incomes. Principal topics include: insurance (medical, life, automobile and disability), consumer credit, estate planning, taxation, personal investments (real estate, securities, etc.), social security legislation and personal financial planning.

Students majoring in MG, MGE, or MIS may not receive credit for both FIN 1250 and FIN 2200.

FIN 2200. FINANCIAL MANAGEMENT.

Cat. I

The financial and competitive status of a company at any given point in time can usually be attributed to prior management decisions. In this course, the student will learn how to use several financial models that together, serve as a sound theoretical framework for analyzing the three types of financial decisions faced by the financial manager. These are 1. investing decisions, 2. financing decisions, and 3. working capital management decisions. The impact of managerial decisions on the financial statements is emphasized. In addition, ethical conduct and global issues relating to the core concepts in the course are explored.

Recommended background: ACC 1100 or BUS 2060 and MA 2611.

Students majoring in MG, MGE, or MIS may not receive credit for both FIN 1250 and FIN 2200.

FIN 2250. FINANCIAL SYSTEM OF THE UNITED STATES.

Cat. II

An analysis of how the financial system of the United States has developed and contributes to the achievement of broad national economic goals as high national income, satisfactory economic growth, stable prices, and equilibrium in balance of payments with other countries. Emphasis is placed on the theory of the supply and demand for short-term money and long-term capital, and the resultant effect on interest rates. Primary concentration on the sources and uses of funds of the major non-bank financial institutions, such as insurance companies, pension funds, mutual funds, finance companies, savings and loan banks and mutual savings banks. A discussion of the reforms of financial institutions, and of money and capital markets to more efficiently allocate the scarce resources of the country. This course is intended to serve the business major and other students interested in understanding the role of financial intermediaries in the United States economy.

Suggested background: some knowledge of accounting and economics will be helpful in taking this course.

This course will be offered in 2013-14, and in alternating years thereafter.

FIN 2260. INVESTMENT AND SECURITY ANALYSIS.

Cat. I

This course is designed to provide an introduction to the language and methodology of security analysis. It is intended to serve two different groups of students: those interested in the subject from the viewpoint of intelligent management of their own portfolios, and those students who have a possible career interest in some facet of the securities industry. Principal topics include: institutional structure and language of the securities market; investment research; alternative investment opportunities; financial statement analysis;

fundamental evaluation of common stocks, preferred stocks and bonds; technical analysis; and business cycle analysis.

Recommended background: ACC 1100 or BUS 2060 and ECON 1120.

MANAGEMENT INFORMATION SYSTEMS (MIS)

MIS 3720. BUSINESS DATA MANAGEMENT.

Cat. I

This course introduces students to the theory and practice of database management and the application of database software to implement business information systems that support managerial and operational decision making. Special topics covered include relational data models, query languages, normalization, locking, concurrency control and recovery. The course covers data administration and the design of data tables for computerized databases. Students will use a commercial database package to design and implement a small business database application.

Recommended background: CS 2118 or equivalent knowledge.

MIS 3740. ORGANIZATIONAL APPLICATIONS OF TELECOMMUNICATIONS.

Cat. I

Students taking this course will develop an understanding of how organizations can effectively use telecommunications technology to enhance business functionality. Students will analyze the development of organizational communications infrastructures and their use for the development of "virtual" organizational structures and to support globally-distributed organizations. The course will begin with a survey of the concepts and technologies which form the basis of a business telecommunications system and which allow the merging of voice, data and video in an integrated multimedia communications structures.

Recommended background: MIS 3700 or BUS 3010.

MIS 4720. SYSTEMS ANALYSIS AND DESIGN.

Cat. I

This course integrates students' background in MIS in a one-term project focusing on development of creative solutions to open-ended business and manufacturing problems. The project will utilize systems analysis and design tools such as systems development life cycle, feasibility study, cost-benefit analysis, structured analysis and design. Students will acquire the skills necessary to analyze, develop, implement, and document real-life information systems. Students must be able to organize themselves and the project to complete their work within a seven week term. It is recommended that MIS majors take this course in preparation for their MQP.

Recommended background: MIS 3720.

MIS 4741 USER EXPERIENCE AND DESIGN.

Cat. II

This course focuses on the newest developments in the field of user experience (UX) (e.g., the use of physiological measures such as eye tracking in UX design) and provides an introduction to various methods used in cutting-edge research laboratories to study user experience. Both theoretical concepts and practical skills with appropriate development tools will be addressed within the scope of the class through hands-on projects and assignments. Students will develop a plan to innovate with user experience and will implement a simple prototype of their plan.

Recommended background: BUS 3010, CS 2102 or ability to program in a higher level programming language.

Credit may not be earned for both MIS 4740 and MIS 4741.

This course will be offered in 2013-14, and in alternating years thereafter.

MIS 4781. INFORMATION SYSTEMS AND TECHNOLOGY POLICY AND STRATEGY.

Cat. II

A successful MIS manager must keep up with the fast-paced changes in technology, apply technology when appropriate, and understand the implications technology has on employees and an organization as a whole. S/he must understand both the internal (e.g., political and organizational culture) and external (e.g., laws, global concerns, and cultural issues) environments. The core MIS capabilities of business and information technology (IT) vision, design of IT architecture, and IT service delivery also need to be understood by effective MIS managers.

Recommended background: MIS 3700 or BUS 3010, MIS 3720 and MIS 4720

This course will be offered in 2013-14, and in alternating years thereafter.

MARKETING (MKT)

MKT 3640. MANAGEMENT OF PROCESS AND PRODUCT INNOVATION.

Cat. I

This course is based on the hypothesis that high performance firms depend on a sustainable pattern of new and innovative processes and products. Successful companies are examined in regard to their strategies for innovation and technology transfer. Technology alliances among industry, universities, and government are considered in order to increase the leverage of the individual firm. Benchmarking and commercialization from research to actualization is discussed through cases and examples.

Recommended background: BUS 2070, FIN 2200, or OIE 2850.

MKT 3651. INDUSTRIAL MARKETING.

Cat. II

Provides an understanding of the industrial marketing process and practices. It presents the latest concepts, tools and techniques for marketing complex products and services to industrial and institutional users. Topics include: product innovation strategies; purchasing management and buyer behavior; major intelligence; pricing strategies and tactics; developing markets for new industrial products; bid proposals; industrial distribution; managing the industrial sales force; marketing controls.

This course will be offered in 2013-14 and in alternating years thereafter.

OPERATIONS AND INDUSTRIAL ENGINEERING (OIE)

OIE 2850. ENGINEERING ECONOMICS.

Cat. I

To aid all engineering students in understanding economics and business constraints on engineering decision making. Topics include evaluation of alternative; the six time-value-of-money factors; present worth, annual cash flow and rate-of-return analysis; incremental analysis; depreciation and income taxes; replacement analysis; inflation; handling probabilistic events; public economy; break-even and minimum cost points; and foreign exchange.

OIE 3405. WORK SYSTEMS AND FACILITIES PLANNING.

Cat. I

This course covers the fundamentals of developing efficient layouts for production and service facilities. Methods analysis, work measurement, material handling and material flow analysis are also covered. Mathematical models and computer tools are used to assist decision-making.

Recommended background: BUS 2080 and BUS 3020.

OIE 3410. MATERIALS MANAGEMENT IN SUPPLY CHAINS

Cat. I

This course is an introduction to the planning and controlling the material flow into, through, and out of an organization. It explains fundamental relationships among the activities that occur in the supply chain from suppliers to customers. In particular, the course addresses the types of manufacturing systems, demand management and forecasting, master production scheduling, materials requirements planning, capacity management, inventory management, distribution resource planning, JIT and lean principles, and other current topics that are pertinent to managing the material flow of supply chains.

Recommended background: knowledge of calculus and BUS 3020.

Students may receive credit for OIE 3401 or OIE 3410.

OIE 3420. QUALITY PLANNING, DESIGN AND CONTROL.

Cat. I

This course provides students with the analytical and management tools necessary to solve manufacturing and service quality problems. Topics include customer needs and quality, quality and cost relationships, process capability analysis, statistical process control, control charts for variables and attributes, design of experiments, and other Six Sigma problem solving methodology.

Recommended background: BUS 3020 and MA 2612 or consent of the instructor.

OIE 3460. SIMULATION MODELING AND ANALYSIS.

Cat. I

This course covers the application of simulation to a variety of managerial problems with examples from operations management, industrial engineering and manufacturing engineering. It introduces the student to the concepts of computer simulation, with an emphasis on the design of a simulation experiment and statistical interpretation of its results. It will discuss simulation of queueing models, inventory and industrial dynamics, and gaming situations.

The role and use of computers for the execution of simulations will also be highlighted. A commercial simulation language such as Arena will be used to solve problems from the manufacturing and service industries.

Recommended background: CS 1101 or CS 1102, and MA 2612.

OIE 3510. STOCHASTIC MODELS.

Cat. I

This is an introductory course in probabilistic models and decision-making under risk, with applications to engineering and management decision making. The course first covers quantitative methods for assessing and evaluating risks and how they are used in decision making. Decision making under risk is examined across a wide set of management and engineering problems. The course then introduces a set of probabilistic models commonly used in decision making and operations improvement; specifically, emphasis is placed on Markov chains, Poisson processes, and queuing theory, and their applications in manufacturing and service systems are illustrated.

Recommended background: knowledge of calculus and introductory probability and statistics.

Students may receive credit for OIE 3501 or OIE 3510.

OIE 4410. CASE STUDIES IN INDUSTRIAL ENGINEERING.

Cat. I

A number of in-depth case studies in operations and industrial engineering are analyzed. The cases will cover both manufacturing and service systems ranging from production system design to operations planning and control.

Recommended background: BUS 2080, BUS 3020, OIE 3401 or OIE 3410, and OIE 3501 or OIE 3510.

OIE 4460. GLOBAL PLANNING AND LOGISTICS.

Cat. II

This case-based course will examine methods and strategies for managing and controlling material movement, with particular emphasis on international operations, from the purchase of production materials to the control of work in process to the distribution of the finished product. Strategies that will be discussed include the design of international distribution networks, the use of third-party logistics providers, and the creation of links between logistic systems and marketing to create competitive advantage. The course will also explore tactical issues that must be managed to pursue a logistics strategy successfully, including choices regarding means of transportation, packaging, and inventory policies. Underlying themes of the course will be the use of information technologies (such as electronic data interchange and bar coding) and mathematical models to support logistics decision-making.

Recommended background: BUS 3020 and one of the following: BUS 2070, FIN 2200 or OIE 2850 or consent of the professor.

This course will be offered 2013-14 and in alternating years thereafter.

ORGANIZATIONAL BEHAVIOR AND CHANGE (OBC)

OBC 3354. ORGANIZATIONAL BEHAVIOR AND CHANGE.

Cat. I

This course focuses on the basic knowledge and processes required of managers to understand behavior in organizations and to apply this knowledge to organizational change. Topics include communication and trust, power and leadership, group and intergroup processes, conflict and conflict management, and work and organizational design. Students apply their knowledge of organizational behavior to the analysis, implementation, and leadership of organizational change. Lectures, video presentations, case studies, group discussions and mini-projects are employed to introduce and illustrate the basic elements of organizational behavior and change.

Recommended background: BUS1010 or consent of the professor.

OBC 4366. LEADERSHIP, ETHICS, AND SOCIAL ENTREPRENEURSHIP.

Cat. I

This upper level course considers the essence of leadership from the perspective of leadership theory, self-inquiry, ethics, and social entrepreneurship. Social entrepreneurship pertains to the creation of social value through innovative solutions to complex, challenging social problems. This course will invite students to think about themselves as ethical leaders who can lead innovation in the context of limited resources and high to moderate risk. Lecture, video presentations, case studies, guest speakers, field work, and mini-projects are used to engage students in these course topics.

Recommended background: BUS1010 or consent of the professor.

CHEMICAL ENGINEERING

NOTE: Courses listed in previous catalogs with "CM" as the prefix and the same course number as below are considered to be the SAME COURSE.

CHE 1011. INTRODUCTION TO CHEMICAL ENGINEERING.

Cat. I

This course provides an introduction to the broad and vital discipline of chemical engineering including conventional and developing chemical technologies. An introduction is provided to the first principles of chemical engineering, as well as environmental, health, safety and ethical issues in chemical engineering practice. An overview is provided of the chemical engineering profession, career choices, the course of study, and a survey of the chemical industry, e.g., polymer, pharmaceutical, food processing, microelectronic, electrochemical, biotechnology, process control, energy, and petroleum refining. Course activities include guest speakers and plant trips.

Recommended for first-year students with a basic knowledge of chemistry.

CHE 2011. CHEMICAL ENGINEERING FUNDAMENTALS.

Cat. I

This first course in chemical engineering is designed to give students the ability to use techniques and solve problems of interest to chemical engineers. Students will learn fundamental material by completing analysis, design, and/or laboratory projects. Topics covered include: material balances and stoichiometry, pressure, volume, and temperature behavior of pure fluids, 1st law of thermodynamics, vapor-liquid equilibria with ideal thermodynamics, and staged separation processes.

Recommended background: Elementary college chemistry and calculus.

Students may not receive credit towards CHE distribution requirements for both CHE 2011 and CM 2001.

CHE 2012. ELEMENTARY CHEMICAL PROCESSES.

Cat. I

This course aims to build a strong foundation in analysis of chemical processes via a project-based approach. Topics covered include analysis and design of stagewise separation processes such as distillation, 1st and 2nd law (of thermodynamics) analysis of power and refrigeration cycles, and application of material and energy balances in industrial chemical processes, including those with recycle and non-ideal systems.

Recommended background: Elementary college chemistry and calculus and some familiarity with the topics listed in CHE 2011.

Students may not receive credit towards CHE distribution requirements for both CHE 2012 and ES 3000.

CHE 2013. APPLIED CHEMICAL ENGINEERING THERMODYNAMICS.

Cat. I

This course uses a project-based approach to build confidence and competence in the use of chemical engineering thermodynamics for the analysis and design of chemical processes. Topics covered include extractive separation systems, solution thermodynamics and nonreacting multicomponent mixtures, phase equilibria and property changes on mixing.

Recommended background: Elementary college chemistry and calculus and some familiarity with the topics listed in CHE 2011 and CHE 2012.

Students may not receive credit towards CHE distribution requirements for both CHE 2013 and CM 2102.

CHE 2014. ADVANCED CHEMICAL PROCESSES.

Cat. I

This course builds on prior work in material and energy balances, chemical engineering thermodynamics, and stagewise separation processes to facilitate student mastery and design of more complex processes. Topics covered include chemical reaction equilibria, material and energy balances for non-steady state systems, combined material and energy balances, humidification, and batch distillation.

Recommended background: Elementary college chemistry and calculus and some familiarity with the topics listed in CHE 2011, CHE 2012, and CHE 2013.

Students may not receive credit towards CHE distribution requirements for both CHE 2014 and CM 2002.

CHE 3201. KINETICS AND REACTOR DESIGN.

Cat. I

Techniques for experimentally determining rate laws for simple and complex chemical reactions, the mechanisms and theories of chemical reactions, the function of catalysts, and the design of isothermal, adiabatic, batch and flow

reactors. The course is intended to provide chemists and chemical engineers with the conceptual base needed to study reactions and perform in the design and analysis of reactors.

Recommended background: differential equations, thermodynamics and some organic chemistry.

CHE 3301. INTRODUCTION TO BIOLOGICAL ENGINEERING.

Cat. II

This course is an introduction to the chemical engineering principles involved in modern applications of biological engineering. Topics may include: an introduction to biology, biochemistry, physiology, and genomics; biological process engineering including fermentation, mammalian cell culture, biocatalysis, and downstream bioseparations; drug discovery, development, and delivery; environmental biotechnology; and chemical engineering aspects of biomedical devices.

Recommended background: material and energy balances, thermodynamics, organic chemistry, and differential equations.

This course will be offered in 2013-14, and in alternating years thereafter.

CHE 3501. APPLIED MATHEMATICS IN CHEMICAL ENGINEERING.

Cat. I

The consolidation of the methods of mathematics into a form that can be used for setting up and solving chemical engineering problems. Mathematical formulation of problems corresponding to specific physical situations such as momentum, energy and mass transfer, and chemical reactions. Analytical and numerical techniques for handling the resulting ordinary and partial differential equations and finite difference equations.

Recommended background: ordinary differential equations, partial derivatives and vectors, momentum heat and mass transfer.

CHE 3910. CHEMICAL AND ENVIRONMENTAL TECHNOLOGY.

Cat. II

Day trips to industrial plants provide an insight into the real world of the chemical industry. Advanced technologies for commercially producing major organic chemicals and the monomers and polymers derived from them are described. Petroleum refining, catalytic and thermal petrochemical processes, soaps and detergents, specialty chemicals, and antibiotic production processes are presented at the industrial level. Large scale unit operations and processes are seen on the plant trips. Students see how plant layout is integrated with process and product control and environmental protection at each facility.

Particular attention is paid to plant scale processes and equipment for control of chemical spills, hazards, and environmental pollution, for safety and accident prevention, and for compliance with local and national laws.

Recommended background: general understanding of Organic Chemistry and Material Balances is assumed.

This course will be offered in 2013-14, and in alternating years thereafter.

CHE 3920. AIR QUALITY MANAGEMENT.

Cat. II

This course discusses the sources, sinks, ambient concentrations and effects of major gaseous and particulate air pollutants. The course is problem oriented and applied engineering methods to develop strategies for managing air quality on a local, regional and global scale. Topics include: indoor air quality, regional air shed modelling, global atmospheric change and design and efficiencies of air pollution control devices.

Recommended background: knowledge of chemistry, mathematics and engineering principles.

This course will be offered in 2014-15, and in alternating years thereafter.

CHE/CE 4063. TRANSPORT & TRANSFORMATIONS IN THE ENVIRONMENT.

Cat. II

In this course, students will learn to make quantitative relationships between human activities and the effects on water, soil, and air in the environment. Students will learn the scientific and engineering principles that are needed to understand how contaminants enter and move in the environment, how compounds react in the environment, how to predict their concentrations in the environment, and how to develop solutions to environmental problems.

Topics to be covered may include water quality engineering (including microbial interactions), air quality engineering, and hazardous waste management.

Recommended Background: familiarity with transport phenomena, such as in ES 3004 (Fluid Mechanics) and ES 3002 (Mass Transfer), and familiarity with reaction kinetics and reactor design, such as through CHE 3201 (Kinetics and Reactor Design). Background such as CE 3059 (Environmental Engineering), CE 3060 (Water Treatment), or CE3061 (Wastewater Treatment) is suggested.

CHE 4401. UNIT OPERATIONS OF CHEMICAL ENGINEERING I.*Cat. I*

Laboratory-application of fundamental theories to practical chemical engineering operations. Emphasis is on building the student's understanding and ability to approach the problems of design and operations of large scale chemical processing equipment.

The course is a combination of lectures and laboratory projects in the area of unit operations. Laboratory projects include experiments in fluid-flow phenomena through various media such as: friction in conduits, filtration, pressure drop in packed towers, fluidization of solids, and spray drying.

Students are expected to carry out the planning and execution of experimental work as well as the analysis and reporting of experimental results in both written and oral format.

Recommended background: knowledge of chemistry, mathematics and engineering principles.

CHE 4402. UNIT OPERATIONS OF CHEMICAL ENGINEERING II.*Cat. I*

Overall format and procedure are essentially the same as in Unit Operations of Chemical Engineering I.

Laboratory projects include experiments in heat and mass transfer such as: heat transfer in two heaters and a cooler, climbing film evaporation, multiple effect evaporation, absorption, extraction, distillation and rotary drying of solids.

Recommended background: familiarity with techniques and procedures emphasized in CHE 4401.

CHE 4403. CHEMICAL ENGINEERING DESIGN.*Cat. I*

Design of equipment, systems and plants; discussion of factors important in chemical plant design such as: economics, cost estimation, profitability, process selection, materials of construction, process control, plant location and safety. Introduction to optimization and computer-aided design. Principles are illustrated with short industrial-type problems.

Recommended background: thermodynamics; heat, mass and momentum transfer; inorganic and organic chemistry; chemical kinetics and reactor design.

CHE 4404. CHEMICAL PLANT DESIGN PROJECT.*Cat. I*

Application of Chemical Engineering design principles to the design of a major chemical plant. Students work in groups to produce a preliminary practical process flowsheet, equipment and plant design, and economic analysis.

Recommended background: familiarity with techniques and procedures emphasized in CHE 4403.

CHE 4405. CHEMICAL PROCESS DYNAMICS AND CONTROL LABORATORY.*Cat. I*

This course is intended to provide laboratory application of fundamental principles of chemical process dynamics and feedback control. This includes open-loop dynamics of typical chemical engineering processes such as distillation, fluid flow, chemical reactors and heated stirred tanks. Closed-loop experiments will involve control loop design, controller tuning, multivariable, and computer control.

Students will be required to design and execute their own experiments based on supplied objectives. Analysis and presentation of the results will be done through oral and written reports.

Recommended background: knowledge of fluid flow and heat transfer, mathematics and chemical engineering principles.

Graduate Chemical Engineering Courses of Interest to Undergraduates

CHE 504. MATHEMATICS ANALYSIS IN CHEMICAL ENGINEERING.

Methods of mathematical analysis selected from such topics as vector analysis, matrices, complex variables, Eigenvalue problems, Fourier analysis, Fourier transforms, Laplace transformation, solution of ordinary and partial differential equations, integral equations, calculus of variations, perturbation and asymptotic methods and numerical analysis. Emphasis on application to the solution of chemical engineering problems.

CHE 506. KINETICS AND CATALYSIS.

Theories of reaction kinetics and heterogeneous catalysis are developed for both simple and complex reactions. The kinetics and mechanisms of both catalyzed and uncatalyzed reactions are explored, as well as the effects of bulk and pore diffusion. Techniques for experimentation, reaction data treatment, and catalyst preparation and characterization are related to developing a sound approach to studying a chemical reaction.

CHE 507. CHEMICAL REACTOR DESIGN.

A review of the design of ideal reactors. Main course topics include: deviations from ideal reactor behavior; transport effects in reacting systems; steady state multiplicity and stability analysis; optimization of reactors; analysis of heterogeneous reactors.

CHE 508. CATALYSIS AND SURFACE SCIENCE OF MATERIALS.

The major factors which distinguished catalytic processes for chemicals and fuels from one another are the structure and composition of the materials used as catalysts.

This course examines the detailed structures and reactivities of solid catalysts like zeolites, solid state inorganics, supported metals and metal-support interactions, carbon catalysts, anchored catalysts and others. Several important spectroscopic techniques used in surface science such as X-ray photoelectron spectroscopy (ESCA), electron microprobe, AUGER, scanning electron microscopy, EXAFS, Mossbauer, Fourier-transform infrared, enhanced laser Raman spectroscopy and photoacoustics spectroscopy will be described for characterization of the catalytic surfaces.

The relationship between the structures and reactivities of important catalysts used in hydrocarbon oxidation and functionalization and syngas reactions will be examined to rationalize how they accomplish specific catalytic transformations.

CHE 510. DYNAMICS OF PARTICULATE SYSTEMS.

Systems of discrete particles which grow in size or some other characteristic variable (e.g., age, molecular weight, etc.) are analyzed. Both reaction engineering and population balance analyses are introduced for batch and continuous systems. Steady state and transient system dynamics are explored.

Depending on class interest, specific topics may include: crystallization, latex synthesis, polymer molecular weight distribution, fermentation/ecological systems and gas-solid systems.

CHE 521. BIOCHEMICAL ENGINEERING.

The course emphasizes the basic concepts of biological systems which are relevant to study by chemical engineers. Topics covered include ligand binding and membrane transport processes; growth kinetics of microorganisms; kinetics of interacting multiple populations; biological reactor design and analysis; soluble and immobilized enzyme kinetics; optimization and control of fermentation; and biological product recovery and separation.

CHE 531. FUEL CELL TECHNOLOGY.

The course provides an overview of the various types of fuel cells followed by a detailed discussion of the proton-exchange membrane (PEM) fuel cell fundamentals: thermodynamics relations including cell equilibrium, standard potentials, and Nernst equation; transport and adsorption in proton-exchange membranes and supported liquid electrolytes; transport in gas-diffusion electrodes; kinetics and catalysis of electrocatalytic reactions including kinetics of elementary reactions, the Butler-Volmer equation, reaction routes and mechanisms; kinetics of overall anode and cathode reactions for hydrogen and direct methanol fuel cells; and overall design and performance characteristics of PEM fuel cells.

CHE 554/CH 554. MOLECULAR MODELING.

This course trains students in the area of molecular modeling using a variety of quantum mechanical and force field methods. The approach will be toward practical applications, for researchers who want to answer specific questions about molecular geometry, transition states, reaction paths and photoexcited states. No experience in programming is necessary; however, a background at the introductory level in quantum mechanics is highly desirable. Methods to be explored include density functional theory, ab initio methods, semiempirical molecular orbital theory, and visualization software for the graphical display of molecules.

CHE 561. ADVANCED THERMODYNAMICS.

An examination of the fundamental concepts of classical thermodynamics and presentation of existence theorems for the thermodynamic properties with study of relations among them. The inequality of Clausius as a criterion for equilibrium in both chemical and physical systems. Examination of thermodynamic equilibrium for a variety of restraining conditions. Applications to fluid mechanics, process systems and chemical systems. Computation of complex equilibria.

CHE 571. INTERMEDIATE TRANSPORT PHENOMENA.

Mass, momentum and energy transport; analytic and approximate solutions of the equations of change. Special flow problems such as creeping, potential and laminar boundary-layer flows. Heat and mass transfer in multi-component systems. Estimation of heat and mass transfer rates. Transport with chemical reaction.

CHE 573. SEPARATION PROCESSES.

Thermodynamics of equilibrium separation processes such as distillation, absorption, adsorption and extraction. Multi-staged separations. Principles and processes of some of the less common separations.

CHE 574. FLUID MECHANICS.

Advanced treatment of fluid kinematics and dynamics. Stress and strain rate analysis using vectors and tensors as tools. Incompressible and compressible, one-dimensional flows in channels, ducts and nozzles. Nonviscous and viscous flow fields. Boundary layers and turbulence. Flow through porous media such as fixed and fluidized beds. Two-phase flows with drops, bubbles and/or boiling. Introduction to non-Newtonian flows.

CHE 580. SPECIAL TOPICS.

This course will focus on various topics of current interest related to faculty research experience.

CHEMISTRY AND BIOCHEMISTRY

GENERAL CHEMISTRY SEQUENCE

The general chemistry sequence, CH 1010—1040, is a unified sequence of courses in which areas of major importance in chemistry are discussed in depth from both the empirical and theoretical viewpoints. Each of the four courses develops a theme, or core idea, of chemistry. The sequence is designed for biology, science and engineering majors.

The format of each course includes four 1-hour classroom meetings and one 3-hour laboratory meeting per week. For reasons of safety, contact lenses may not be worn in the chemical laboratories. Prescription glasses meeting the ANSI standard Z87.1 will be accepted as affording adequate eye protection in the laboratory. Otherwise, goggles meeting these standards must be worn at all times.

CH 1010. MOLECULARITY.

Cat. I

The theme of CH 1010 is that all matter in the universe is composed of atoms bonded together in a limited number of ways. Molecularity is one of a small number of fundamental themes of chemistry (and of all science); it is important for us to address it immediately because it permeates all of chemistry.

Specific concepts that we will discuss are:
 Introduction to the Molecular View
 Types of Compounds: The Periodic Table
 Chemical Calculations
 Types of Reactions
 The Quantum Structure of the Atom

CH 1020. FORCES AND BONDING.

Cat. I

We will examine the origin and strength of electrical forces within molecules (covalent bonds), between positive and negative ions in a lattice (ionic bonds), and between atoms or molecules of a pure substance (intermolecular forces). Energy changes accompanying the rupture or formation of such bonds will be discussed.

Specific concepts that we will discuss are:
 Molecular Structure and Shape
 Gases
 Solids
 Intra- and Intermolecular Forces
 Liquids
 Energy (First Law of Thermodynamics)

CH 1030. EQUILIBRIUM.

Cat. I

We will examine the nature of dynamic equilibrium at the molecular level, and will develop an understanding of the mathematical aspects of equilibrium. Phase equilibrium, further aspects of thermodynamics (entropy, free energy), equilibrium of chemical reactions in the gas phase, and equilibrium of chemical reactions in solution will be discussed.

Specific concepts that we will discuss are:
 Phase Equilibrium
 Chemical Equilibrium of Gas Phase Reactions
 Solutions
 Chemical Equilibrium of Reactions in Solution
 Entropy and Free Energy

CH 1040. DYNAMICS.

Cat. I

We will examine the nature of molecular motions and their interaction with light, which provides us with all of our structural information about molecules. Various types of molecular spectroscopy will be discussed. Then we will turn to the dynamics of interactions between molecules, examining the rates of chemical reactions, and discussing the detailed molecular pathways by which they occur.

Specific concepts that we will discuss are:

NMR Spectroscopy
 Vibrational Spectroscopy
 Electronic Spectroscopy
 Dynamics of Physical Processes (Diffusion, phase changes, phase distribution)
 Dynamics of Chemical Processes

ORGANIC CHEMISTRY COURSES

CH 2310. ORGANIC CHEMISTRY I.

Cat. I

A systematic survey of the major reaction types and functional groups in organic chemistry. The course will provide a representative collection of characteristic reactions and transformations of a variety of types of organic molecules. Most of the examples will be drawn from aliphatic chemistry. Some theoretical models will be introduced with a view toward establishing a general overview of the material.

The course is intended for chemists, chemical engineers, pre-medical students and all those interested in the biosciences. A familiarity with the material presented in the general chemistry courses is assumed.

CH 2320. ORGANIC CHEMISTRY II.

Cat. I

Modern theories of aromaticity, including a general assessment of delocalized bonding. The chemistry of some significant functional groups not surveyed in Organic Chemistry I, and the meaning of acidity and basicity in organic chemistry, will be more fully explored. The course will provide an introduction to the systematic synthesis of polyfunctional organic compounds.

Recommended background: CH 2310. The course is intended for chemists, chemical engineers and bio-science majors.

CH 2330. ORGANIC CHEMISTRY III.

Cat. I

This course fully explores three most important analytical methods in organic chemistry: infrared spectroscopy, mass spectrometry, and nuclear magnetic resonance spectroscopy. It will continue the coverage of aromatic chemistry. New topics to be introduced include structures, properties, and reactivities of aldehydes and ketones, carboxylic acids and their derivatives, amines, and the interaction among polyfunctional compounds. It reinforces the retrosynthetic analysis and multistep synthesis of organic compounds and revisits reaction mechanisms and stereochemistry of all the new functional groups studied.

Recommended background: CH2310 and CH2320. The course is intended for biochemists, chemists, chemical engineers and bioscience majors.

CH 2360. ORGANIC LABORATORY.

Cat. I

Laboratory experience in the preparation, purification, and characterization of organic substances. The course will also contain sufficient training in laboratory technique and data handling so that no previous laboratory experience beyond that of general chemistry will be assumed. (To be taken concurrently or following studies in organic chemistry.) Recommended for chemical engineers, pre-medical students, BB majors, and other nonchemists desiring chemical laboratory experience. One lecture and three three-hour labs.

CH 3310. ADVANCED ORGANIC CHEMISTRY.

Cat. II

This course will review and further develop concepts introduced in CH2310, CH2320, and CH2330. These concepts will include oxidation states of organic compounds, acidity and basicity, and stereochemistry and conformational analysis. Chemical reactivity will be emphasized and will include functional group interconversion and ionic and free radical carbon-carbon bond formation.

Recommended background: CH2310, CH2320, and CH2330. This course is intended for students planning to take advanced courses in organic and/or medicinal chemistry and for chemists, biochemists, chemical engineers, and bio-science majors who desire a stronger background in organic chemistry.

Offered in 2014-15 and in alternating years thereafter.

EXPERIMENTAL CHEMISTRY SEQUENCE

The following four courses provide a full-year laboratory program. The purpose of this sequence is to train students in the most essential laboratory techniques, procedures and instrumentation of experimental chemistry. It aims to develop the skills needed for effective work on future chemical laboratory projects such as the Major Qualifying Project. The work of the year develops sequentially.

CH 2640. EXPERIMENTAL CHEMISTRY I: INSTRUMENTAL ANALYSIS.

Cat. I

This laboratory course focuses on the application of modern instrumental methods of analysis to chemical, biochemical and environmental problems. Practical experience is gained in quantitative electrochemistry, ultraviolet-visible spectrophotometry, fluorometry and bioluminescence, high performance liquid chromatography, and capillary electrophoresis. Principles of experimental design and execution are developed as student teams select a chemical, biochemical or environmental problem, formulate an approach, conduct the analysis, and present findings to the class. Methods of data analysis and common statistical approaches are emphasized throughout the course.

Recommended background: CH 1010, CH1020, CH1030, CH 1040.

CH 2650. EXPERIMENTAL CHEMISTRY II.

Cat. I

The experiments to be performed this term have been chosen to illustrate important principles and experimental techniques of physical chemistry. Students will gain experience with many of the instruments that they are likely to use in any chemical laboratory setting. These include optical spectrometers, vacuum lines, molecular modeling workstations and calorimeters.

Recommended background: CH 2640 and CH 3510.

CH 2660. EXPERIMENTAL CHEMISTRY III.

Cat. I

The emphasis in CH 2660 is on basic techniques essential for the synthesis, isolation, and characterization of organic compounds. These include isolation and purification by solvent extraction, crystallization, distillation, and chromatographic techniques, followed by the determination of physical properties and characterization by infrared and nuclear magnetic resonance spectroscopy. Micro-synthetic procedures are introduced. Mastery of the techniques and manipulations emphasized in CH 2640 and CH 2650 would be advantageous.

CH 2670. EXPERIMENTAL CHEMISTRY IV.

Cat. I

The synthesis, isolation, and characterization of inorganic compounds are emphasized. Syntheses of main group compounds, classical transition metal complexes, and organotransition metal compounds are included. In addition to reinforcing and building on standard techniques of synthesis and characterization, several new techniques are introduced: synthesis under inert atmosphere, measurement of magnetic susceptibility by NMR, and cyclic voltammetry. Some exposure to ^{13}C NMR is also provided. The final experiment of the course requires the student to design a synthesis for a compound selected from a list provided, based on strategies learned in the course.

INORGANIC AND PHYSICAL CHEMISTRY COURSES

CH 3410. PRINCIPLES OF INORGANIC CHEMISTRY.

Cat. I

This course provides the fundamental understanding of atomic, molecular and solid state structures and properties. Orbital structures of atoms, symmetry of molecules and point groups are used to understand chemical bonding and reactions. Various acid-base concepts are explored to analyze the acidity of cations and basicity of anions, solubility and precipitations of inorganic compounds, and metal-ligand binding affinities. Redox properties are discussed using Pourbaix diagrams. Thermodynamic stabilities of inorganic species are discussed using acid-base and redox concepts and thermochemical analyses are used to analyze chemical reactivity at atomic, molecular, and solid state level.

CH 3510. CHEMICAL THERMODYNAMICS.

Cat. I

The content of this course will be the development of the principles of classical thermodynamics. The laws of thermodynamics will be developed by using a series of increasingly complex model systems and a universal equation of state is formulated which incorporates the relationships illustrated by these model systems. Using this equation it will be possible to appreciate that thermodynamic laws are applicable to all systems of matter, regardless of their complexity.

Finally, the principles developed are applied to problems of a chemical nature, focusing on predicting the spontaneity of chemical reactions.

The material in this course will be of greatest interest to those students enrolled in the basic sciences including biology, chemistry, and physics, and in applied fields such as chemical engineering, materials science and biotechnology.

Recommended background: Students should be familiar with the material covered in the general chemistry sequence CH 1010-1040, and calculus including multi variables.

CH 3530. QUANTUM CHEMISTRY.

Cat. I

An introduction to quantum mechanics with applications to atomic and molecular species. The course will be developed systematically beginning with the postulates of quantum mechanics. The Schrodinger equation will be applied to systems such as the particle in a box, the rigid rotor, the harmonic oscillator and the hydrogen atom. Emphasis will be given to a quantum mechanical description of multielectron atoms, molecular bonding and spectroscopy.

Recommended background: a solid foundation in elementary physics and calculus.

This course is normally for students in their third year.

CH 3550. CHEMICAL DYNAMICS.

Cat. I

This course deals in a general way with the interactions between energy and molecules, and considers how energetic and structural considerations affect the outcome of molecular interactions. The manipulation of kinetic data and results is stressed. Selected topics from both organic and inorganic chemistry are analyzed in terms of reaction thermodynamics, rates and mechanisms.

Students are expected to be familiar with thermodynamics, equilibria, reaction rates and the Periodic Table of the elements.

The following three courses, CH 4110, CH 4120, and CH 4130, are a three-term sequence intended to provide a strong emphasis in biochemistry. As background for this sequence, CH 1010, CH 1020, CH 1030, CH 1040, CH 2310, CH 2320, and CH 2330, or their equivalents, are recommended.

BIOCHEMISTRY COURSES

CH 4110. BIOCHEMISTRY I.

Cat. I

The principles of protein structure are presented. Mechanisms of enzymatic catalysis, including those requiring coenzymes, are outlined in detail. The structures and biochemical properties of carbohydrates are reviewed. Bioenergetics, the role of ATP, and its production through glycolysis and the TCA cycle are fully considered.

Recommended background: CH 2310, CH 2320.

Suggested background: CH 2330.

CH 4120. BIOCHEMISTRY II.

Cat. I

Oriented around biological membranes, this course begins with a discussion of electron transport and the aerobic production of ATP followed by a study of photosynthesis. The study of the biosynthesis of lipids and steroids leads to a discussion of the structure and function of biological membranes. Finally the membrane processes in neurotransmission are discussed.

Recommended background: CH 4110.

CH 4130. BIOCHEMISTRY III.

Cat. I

This course presents a thorough analysis of the biosynthesis of DNA (replication), RNA (transcription), and proteins (translation). Proteins and RNAs have distinct lifetimes within the living cell; thus the destruction of these molecules is an important biochemical process that is also discussed. In addition to mechanistic studies, regulation of these processes is covered.

Students who have received credit for CH 4130 or BB 4910 prior to Term A 2000 may not receive credit for the other course.

CH 4150. EXPERIMENTAL BIOCHEMISTRY.

Cat. I

The experiments in this laboratory course have been designed to acquaint the students with the basic skills necessary to perform biochemical studies. The course will cover, for instance, protein purification, subcellular fractionation, enzyme kinetics (K_m , V_{max} , specific activity, effector-protein interaction, etc.), exclusion and ion exchange chromatography, and electrophoresis.

Recommended background: CH 4120.

CH 4160. MEMBRANE BIOPHYSICS.*Cat. II*

This course will focus on different areas of biophysics with special emphasis on membrane phenomena. The biomedical-biological importance of biophysical phenomena will be stressed. The course will begin with the introduction of the molecular forces relevant in biological media and subsequently develop the following topics: Membrane Structure and Function; Channels, Carriers and Pumps; Nerve Excitation and related topics; and Molecular Biophysics of Motility.

Recommended background: prior knowledge of Biochemistry (CH 4110, CH 4120), Mechanics (PH 1110) and Electricity (PH 1120).

This course will be offered in 2013-14 and in alternating years thereafter.

CH 4170. EXPERIMENTAL BIOCHEMISTRY II.*Cat. I*

This laboratory course focuses on modern DNA technologies and general applications of gene manipulation. Topics include gene amplification and recombination, promoter and plasmid engineering, gene expression and analysis, model systems, genomics and transgenics. Experiments in this course are integrated into an overall genetic engineering project throughout the term that will involve techniques such as electrophoresis, quantitative spectrofluorimetry, and real-time quantitative PCR. Methods of data analysis, common statistical approaches and technical writing will be emphasized throughout the course.

Recommended background: CH 4110, CH 4120, CH 4130.

CH/BB 4190. REGULATION OF GENE EXPRESSION.*Cat. I*

This course will cover the biochemical mechanisms involved in regulation of gene expression, modifications of DNA structures that influence transcription rates, transcriptional regulation by protein binding, post-transcriptional modifications of RNA including splicing and editing, regulation of translation including ribosome binding and initiation of translation, and factors that control the half-lives of both mRNA and protein. During the course, common experimental methods will be explored, including a discussion of the information available from each method.

Recommended background CH 4110, CH 4120, CH 4130, BB 4010

ADVANCED CHEMISTRY COURSES**CH 4330. ORGANIC SYNTHESIS.***Cat. II*

A discussion of selected modern synthetic methods including additions, condensations and cyclizations. Emphasis is placed on the logic and strategy of organic synthesis. This course is intended to follow CH 2330.

Recommended background: CH 2310, CH 2320, and CH 2330.

This course will be offered in 2014-15 and in alternating years thereafter.

CH 4420. INORGANIC CHEMISTRY II.*Cat. II*

Complexes of the transition metals are discussed. Covered are the electronic structures of transition metal atoms and ions, and the topological and electronic structures of their complexes. Symmetry concepts are developed early in the course and used throughout to simplify treatments of electronic structure. The molecular orbital approach to bonding is emphasized. The pivotal area of organotransition metal chemistry is introduced, with focus on complexes of carbon monoxide, metal-metal interactions in clusters, and catalysis by metal complexes.

Recommended background: CH 1010 - CH 1040, CH 2640 - CH 2670, CH 3410, CH 3530, and CH 3550.

This course will be offered in 2013-14 and in alternating years thereafter.

CH 4520. CHEMICAL STATISTICAL MECHANICS.*Cat. II*

This course deals with how the electronic, translational, rotational and vibrational energy levels of individual molecules, or of macromolecular systems, are statistically related to the energy, entropy, and free energy of macroscopic systems, taking into account the quantum mechanical properties of the component particles. Ensembles, partition functions, and Boltzmann, Fermi-Dirac, and Bose-Einstein statistics are used. A wealth of physical chemical phenomena, including material related to solids, liquids, gases, spectroscopy and chemical reactions are made understandable by the concepts learned in this course.

Recommended background: CH 3510 and CH 3530, or equivalent, and mathematics through differential and integral calculus.

This course will be offered in 2013-14 and in alternating years thereafter.

GRADUATE CHEMISTRY COURSES OF INTEREST TO UNDERGRADUATES**CH 516. CHEMICAL SPECTROSCOPY.**

Advanced topics in identification of organic species and determination of molecular structure by spectroscopic methods.

Methods covered include ^1H - and ^{13}C -NMR, mass spectrometry and infrared and UV-visible spectroscopy. This course is concerned only with interpretation of spectra and does not cover techniques obtaining them; there is no laboratory.

CH 536. THEORY AND APPLICATIONS OF NMR SPECTROSCOPY.

This course emphasizes the fundamental aspects of 1D and 2D nuclear magnetic resonance spectroscopy (NMR). The theory of pulsed Fourier transform NMR is presented through the use of vector diagrams. A conceptual nonmathematical approach is employed in discussion of NMR theory. The course is geared toward an audience which seeks an understanding of NMR theory and an appreciation of the practical applications of NMR in chemical analysis. Students are exposed to hands-on NMR operation. Detailed instructions are provided and each student is expected to carry out his or her own NMR experiments on a Bruker AVANCE 400 MHz NMR spectrometer.

CH 538. MEDICINAL CHEMISTRY.

This course will focus on the medicinal chemistry aspects of drug discovery from an industrial pharmaceutical Research and Development perspective. Topics will include Chemotherapeutic Agents (such as antibacterial, antiviral and antitumor agents) and Pharmacodynamic Agents (such as antihypertensive, antiallergic, antiulcer and CNS agents).

Recommended background: CH 2310, CH 2320, and CH 2330.

CH 554. MOLECULAR MODELING.

This course trains students in the area of molecular modeling using a variety of quantum mechanical and force field methods. The approach will be toward practical applications, for researchers who want to answer specific questions about molecular geometry, transition states, reaction paths and photoexcited states. No experience in programming is necessary; however, a background at the introductory level in quantum mechanics is highly desirable. Methods to be explored include density functional theory, ab initio methods, semiempirical molecular orbital theory, and visualization software for the graphical display of molecules.

CH 555. ADVANCED TOPICS.

A course of advanced study in selected areas whose content and format to suit the interest and needs of faculty and students.

CIVIL AND ENVIRONMENTAL ENGINEERING**CE 1030. CIVIL ENGINEERING AND COMPUTER FUNDAMENTALS.***Cat. I*

This course introduces students to basic fundamentals of civil engineering, group dynamics, oral presentation skills, engineering report writing techniques, and uses of the computer. Basics of structural engineering, geotechnical engineering, environmental engineering, surveying, materials, and construction engineering and management are presented in this course through a collaborative group teaching approach. Background is provided to gain competence in operating systems, editors, and spreadsheets. Student groups complete weekly computer laboratory projects and develop oral presentations and written reports.

No previous computer use skills are required or assumed. This course is recommended for freshman or sophomore students.

CE 2000. ANALYTICAL MECHANICS I.*Cat. I*

This fundamental civil engineering course provides an introduction to the analysis of structures in static equilibrium. The focus of this course is a classical analysis of concurrent and non-concurrent equilibrium. A variety of engineering problems including trusses, machines, beams, rigid frames, and hydraulic structures involving concentrated and distributed loading systems are analyzed for external reactions and internal forces.

CE 2001. ANALYTICAL MECHANICS II.*Cat. I*

This course provides an introduction to the relationship between analysis, design, and the behavior of materials under load. Theory and applications are developed that utilize simple and combined stress-strain behavior of members subjected to axial, torsional, and flexural loadings, with applications to beams, trusses, rigid frames, shafts, and tension and compression structures.

Recommended background: CE 2000.

CE 2002. INTRODUCTION TO ANALYSIS AND DESIGN.*Cat. I*

This course develops an understanding of classical and modern structural analysis. Topics include loading systems, and the analysis of statically determinate and statically indeterminate beams, frames, trusses, structural floor systems for buildings, bridges, and other structural assemblies.

Recommended background: CE 2000 and CE 2001.

Suggested background: CE 1030.

CE 2020. SURVEYING.*Cat. I*

This course develops fundamental skills in the theoretical and practical aspects of plane surveying through the use and care of modern instruments and the associated computations. Topics include the classification of errors incurred in observed field data and necessary correction applications, the use and care of surveying equipment, traversing, differential leveling, stadia and mapping, and electronic data transfer. Computer applications are used where appropriate.

CE 3006. DESIGN OF STEEL STRUCTURES.*Cat. I*

This course covers the theory and practice of structural steel design. The structural design process for beams, columns, trusses, frames, and connections is based on Load and Resistance Factor Design (LRFD) specifications of the American Institute of Steel Construction.

Recommended background: CE 2002 and CE 3010.

Suggested background: CE 1030.

CE 3008. DESIGN OF REINFORCED CONCRETE STRUCTURES.*Cat. I*

This course covers the theory and practice of reinforced concrete design. The structural design process for beams, columns, slabs, frames, flat slabs, footings, and retaining walls uses the ultimate strength design codes of the American Concrete Institute.

Recommended background: CE 2002 and CE 3010.

Suggested background: CE 1030.

CE 3010. STRUCTURAL ENGINEERING.*Cat. I*

This course provides an understanding of the practice of structural engineering. It builds upon the fundamental skills developed in CE 2000, CE 2001, and CE 2002 to present the principles of structures and their elements. The course provides a perspective for dealing with the issues of strength, stiffness, and stability. Although wood is the principle material used to develop the study of the interrelationship between analysis and design of structural systems, structural steel and reinforced concrete systems are also discussed. It also introduces students to the use of building codes for design criteria. The role of the structural engineer in the design process and cost factors are also discussed.

Recommended background: CE 2000, CE 2001, and CE 2002.

Suggested background: CE 1030.

CE 3020. PROJECT MANAGEMENT.*Cat. I*

This course presents the fundamental concepts and process of project management applied to public and private works. The principle focus of the course is the management of civil engineering projects including planning, scheduling, organization and control, as well as management concepts of leadership, motivation, trust, project team development, division of work, and conflict resolution. Ancillary engineering and construction practices involving financial practices, construction documents, contract negotiation and administration, quality and safety control, insurance and bonding are covered.

Recommended background: CE 1030.

CE 3022. LEGAL ASPECTS OF PROFESSIONAL PRACTICE.*Cat. I*

The course focuses on the legal underpinnings that regulate the design and execution of construction projects and the relations between their participants. The subject is presented according to the various phases of a construction project, from inception to handover. The overall objective is to develop an awareness of the legal aspects that regulate the exercise of the architectural and civil engineering profession and of the environmental constraints of construction. Topics such as permitting process, design/engineering services and ethical issues are included.

CE 3024. CONTROL SURVEYING.*Cat. II*

This course presents the principles and field procedures required in the design of vertical and horizontal control networks for large building and construction projects.

Recommended background: CE 2020.

Offered in 2014-15 and in alternating years thereafter.

CE 3025. PROJECT EVALUATION.*Cat. I*

In this course students are provided with a systematic framework for evaluating the economic sustainability and financial aspects of a building investment through its life cycle: project definition, design, construction and operation. The course develops according to several interrelated topics: budgeting (square foot cost and parametric estimating) and economic feasibility analysis, financing mechanisms, cash flow analysis, (time-value -of -money factors, present worth and rate of return), life-cycle assessment (environmental impact analysis), taxes, depreciation and regulations as well as consideration of risks and uncertainties.

Recommended background: AREN 2023.

This course is offered in 2014-15.

CE 3026. MATERIALS OF CONSTRUCTION.*Cat. I*

This course provides an understanding of the use and acquisition of engineering properties of construction materials. Topics include relationships between the structure of materials, their engineering properties, and the selection of suitable materials for applications involving strength, durability, and serviceability. Experimental laboratory procedures including design of experiments, data collection, analysis, and representation, and report writing are an integral part of the work.

Recommended background: CE 1030 and CE 2001.

Some sections of this course may be offered as *Writing Intensive (WI)*.

CE 3030. FUNDAMENTALS OF CIVIL ENGINEERING AUTOCAD.*Cat. I*

This course introduces Civil Engineering students to fundamental uses of the AutoCAD software package. Basic two dimensional drawing techniques are covered. Advanced topics that may be covered include three dimensional drawing, rendering and animation. Students are required to become familiar with AutoCAD.

Knowledge of the subject matter in at least two civil engineering design courses is expected background for this course.

CE 3031. 3D OBJECT-ORIENTED PARAMETRIC SOFTWARE APPLICATIONS IN CIVIL ENGINEERING.*Cat. I*

This course introduces students to fundamental software applications for design and construction planning throughout the different phases of the development of civil engineering projects. The course covers the principles of basic 3D software environments, object creation and manipulation, assemblies of objects, surface and terrain modeling, building modeling, geographic and building information databases. Emphasis is given to the adaptability of this software to changes in design and to the production of graphic design documentation. Application software such as AutoCAD Civil 3D and Autodesk Revit is used in this course.

Recommended background: CE 1030.

CE 3041. SOIL MECHANICS.*Cat. I*

This is an introductory course dealing with the science and technology of earth materials with an emphasis on fundamental concepts of particulate mechanics. The topics which are discussed include fluid flow through porous media, deformation and shear characteristics of soil, consolidation, lateral earth pressure, and slope stability.

Recommended background: CE 2000 and CE 2001.

Suggested background: GE 2341.

CE 3044. FOUNDATION ENGINEERING.*Cat. II*

Foundation engineering is a study of the applications of the principles of soil mechanics and structural theory to the analysis, design and construction of foundations for engineering works with the emphasis on the soil engineering aspects of soil structure interaction. Subsurface exploration techniques, design of rigid and flexible retaining structures, and design of, shallow and deep foundations are considered. Although the course deals mainly with aspects of the design of buildings and bridges, certain parts of the course (design of temporary trench bracing, for example) are very relevant to construction engineering.

Recommended background: CE 3041.

Suggested background: CE 3008.

Offered in 2014-15 and in alternating years thereafter.

CE 3050. TRANSPORTATION: TRAFFIC ENGINEERING.*Cat. I*

This course provides an introduction to the field of transportation engineering with particular emphasis on traffic engineering. Topics covered include a description of the transportation industry and transportation modes; characteristics of drivers, pedestrians, vehicles and the roadway; traffic engineering studies, highway safety, principles of traffic flow, intersection design and control, capacity analysis, and level of service analysis.

Suggested background: CE 2020.

CE 3051. TRANSPORTATION: PAVEMENT ENGINEERING.*Cat. I*

This course provides an introduction to concepts required for design construction and management of pavements. Topics include Highway Drainage, Soil Engineering for Highway Design, Bituminous Materials, Design of Flexible and Rigid Pavements and Pavement Management. Knowledge of the subject matter in CE 3050 is helpful but not required.

CE 3059. ENVIRONMENTAL ENGINEERING*Cat. I*

This course provides an introduction to engineering aspects of environmental quality control. Students will learn fundamental science and engineering principles needed for environmental engineering, including concepts in chemistry, biology, physics, mass conservation, kinetics and reactor design. These principles are then applied to environmental engineering problems, including modeling of pollutants in natural systems and design of unit processes in engineered systems. Topics covered include environmental regulations, surface and ground water quality, drinking water treatment, wastewater treatment, air pollution, and hazardous waste management.

Recommended background: college-level chemistry.

CE 3060. WATER TREATMENT.*Cat. I*

This course provides in-depth coverage of processes used in water treatment. Topics include: review of water chemistry and drinking water standards, impurities in natural waters, aeration, water softening coagulation, flocculation, sedimentation, filtration, disinfection, taste and odor control, corrosion control, and iron and manganese removal.

Recommended background: CE 3059 and ES 3004.

CE 3061. WASTE WATER TREATMENT.*Cat. I*

This course provides in-depth coverage of processes used in wastewater treatment. Topics include: review of water quality standards, wastewater characteristics, application of biochemical oxygen demand, sources and effects of pollution, physical, chemical, and biological wastewater treatment processes, and waste sludge management.

Recommended background: CE 3059 and ES 3004.

CE 3062. HYDRAULICS.*Cat. I*

This course provides a background for applying the principles of fluid mechanics to analyze and design hydraulic and fluid flow systems for projects related to water resources and civil and environmental engineering. Topics include hydraulics in pipes and closed systems, open channels and rivers, water supply systems and water distribution networks, pump systems and turbines, wastewater collection and treatment systems, and coastal and other natural environmental systems. Course content includes water quality and energy considerations, as well as the development and application of hydraulic models.

Recommended background: ES 3004.

CE 3070. URBAN AND ENVIRONMENTAL PLANNING.*Cat. I*

This course introduces to the student the social, economic, political, and environmental factors that affect the complex relationship between the built and natural environment. By using the principles of sustainable development and the procedures of planning, the optimal development pattern may be examined, and the infrastructure (roads, water supply systems, waste-water treatment systems, shopping malls, etc.) necessary to support present and future growth patterns may be determined. The information necessary in planning, which involves conscious procedures of analysis, formulation of alternative solutions, rational assessment and deliberate choice in accordance with evaluation criteria, is obtained through extensive reading. As such, the course introduces a variety of topics of concern to engineers and environmental scientists. The course is intended not only for civil engineering majors, but also for students preparing for an IQP in areas of urban or environmental concerns.

Some sections of this course may be offered as Writing Intensive (WI).

CE 3074. ENVIRONMENTAL ANALYSIS.*Cat. II*

This course provides a background in the principles and techniques of assessing areas of natural environment and applying environmental assessments to evaluate the inherent suitability of these areas for sustainable urban and resource-based uses. Topic areas include basic concepts in sustainability, landscape characterization and analysis, and environmental impact assessment and planning. The concepts and techniques developed in this course are useful for land use planning, site design, natural resources management, and the determination of the impact of engineering projects on the environment.

Suggested background: CE 3059 or CE 3070.

Offered in 2013-14 and in alternating years thereafter.

CE 4007. MATRIX ANALYSIS OF STRUCTURES.*Cat. II*

This course presents the principles of matrix analysis of structural elements and systems; fundamentals of matrix algebra, solution of simultaneous equations, matrix inversion; analysis of plane trusses, method of joints; displacement method, principle of virtual work, analysis of continuous beams, analysis of plane frames, plane trusses, analysis of building frames and bridges; computer aided structural analysis and principles of software development.

Recommended background: CE 2002.

Offered in 2014-15 and in alternating years thereafter.

CE 4017. PRESTRESSED CONCRETE DESIGN.*Cat. II*

This course covers analysis and design aspects of prestressed concrete structural elements and systems: principles of prestressing, materials for prestressing, high strength steel, flexural analysis and design methods; allowable stress and strength design methods; design of beams, load balancing, partial prestressing and cracking moment; design for shear, partial loss of prestress; deflections of prestressed concrete and precast construction; connections.

Recommended background: CE 2002 and CE 3026.

Suggested background: CE 3008.

Offered in 2013-14 and in alternating years thereafter.

CE 4054. TRANSPORTATION: INFRASTRUCTURE MATERIALS LABORATORY.*Cat. II*

This laboratory-based course introduces standard laboratory soil and asphalt materials testing procedures, and effect of physical properties on performance of soils and asphalt pavements. The tests which are performed include: grain size analysis, Atterberg limits, specific gravity, permeability, compaction, compression and consolidation, and triaxial shear for soils, and penetration, consensus and source properties of aggregate, compaction, resilient modulus, indirect tensile strength and nondestructive testing of soils and hot mix asphalt.. Instruction is provided through lecture, laboratory work and field trip.

Recommended background: CE 3041 and CE 3052.

Offered in 2013-14 and in alternating years thereafter.

CE 4060. ENVIRONMENTAL ENGINEERING LABORATORY.*Cat. I*

This course familiarizes students with the laboratory studies used to obtain the design parameters for water and wastewater treatment systems. The topics include laboratory experiments dealing with physical, chemical, and biological treatment systems.

Recommended background: CE 3060 and CE 3061.

CE 4061. HYDROLOGY.*Cat. II*

This course introduces the concepts and principles governing the distribution and transport of water in the environment, and also provides a background for quantifying hydrologic processes as required for the development of water resources projects. Topics include the hydrologic cycle, precipitation, evaporation and transpiration, infiltration, runoff analysis, streamflow, hydrologic routing, statistics and probability in hydrology, and the quantification of hydrologic processes for water quality protection. The course introduces field techniques and the use of hydrologic models for solving problems in water resources and hydrology.

Recommended background: ES 3004.

Offered in 2013-14 and in alternating years thereafter.

CE/CHE 4063. TRANSPORT & TRANSFORMATIONS IN THE ENVIRONMENT.

In this course, students will learn to make quantitative relationships between human activities and the effects on water, soil, and air in the environment. Students will learn the scientific and engineering principles that are needed to understand how contaminants enter and move in the environment, how compounds react in the environment, how to predict their concentrations in the environment, and how to develop solutions to environmental problems.

Topics to be covered may include water quality engineering (including microbial interactions), air quality engineering, and hazardous waste management.

Recommended Background: familiarity with transport phenomena, such as in ES 3004 (Fluid Mechanics) and ES 3002 (Mass Transfer), and familiarity with reaction kinetics and reactor design, such as through CHE 3201 (Kinetics and Reactor Design). Background such as CE 3059 (Environmental Engineering), CE 3060 (Water Treatment), or CE3061 (Wastewater Treatment) is suggested.

CE 4071. LAND USE DEVELOPMENT AND CONTROLS*Cat. I*

The purpose of this course is to provide an understanding of the regulatory framework under which land is developed and the built environment is designed. The quality of our environment depends upon the development which is permitted to take place and the controls which direct that development. Through this course, the student will learn the principles, methods, and techniques which a planner or engineer may use to plan and design the highest and best uses and development of land. In particular, the use and limits of zoning, special permits, subdivision control, and other tools with which a developer or planner should be familiar will be examined in detail.

Some sections of this course may be offered as Writing Intensive (WI).

CE 4600. HAZARDOUS AND INDUSTRIAL WASTE MANAGEMENT.*Cat. II*

This course will cover concepts and techniques for handling hazardous and industrial wastes. Regulations governing hazardous waste, water & soil remediation concepts, and the fundamentals of waste treatment processes will be discussed. Instruction will be provided through lectures, fieldtrips, practitioner seminars, and class problem solving sessions.

Recommended background: ES 3004 and CE 3059.

This course will be offered in 2014-15 and in alternating years thereafter.

COMPUTER SCIENCE

CS 1101. INTRODUCTION TO PROGRAM DESIGN.*Cat. I*

This course introduces principles of computation and programming with an emphasis on program design. Topics include design and implementation of programs that use a variety of data structures (such as records, lists, and trees), functions, conditionals, and recursion. Students will be expected to design, implement, and debug programs in a functional programming language.

Recommended background: none. Either CS 1101 or CS 1102 provide sufficient background for further courses in the CS department. Undergraduate credit may not be earned for both this course and CS 1102.

CS 1102. ACCELERATED INTRODUCTION TO PROGRAM DESIGN.*Cat. I*

This course provides an accelerated introduction to design and implementation of functional programs. The course presents the material from CS 1101 at a fast pace (so students can migrate their programming experience to functional languages), then covers several advanced topics in functional programming

(potential topics include macros, lazy programming with streams, and programming with higher-order functions). Students will be expected to design, implement, and debug programs in a functional programming language.

Recommended background: prior programming background covering lists, trees, functions, and recursion.

Undergraduate credit may not be earned for both this course and CS 1101.

CS 2011. INTRODUCTION TO MACHINE ORGANIZATION AND ASSEMBLY LANGUAGE.*Cat. I*

This course introduces students to the structure and behavior of modern digital computers and the way they execute programs. Machine organization topics include the Von Neumann model of execution, functional organization of computer hardware, the memory hierarchy, caching performance, and pipelining. Assembly language topics include representations of numbers in computers, basic instruction sets, addressing modes, stacks and procedures, low-level I/O, and the functions of compilers, assemblers, linkers, and loaders. The course also presents how code and data structures of higher-level languages are mapped into the assembly language and machine representations of a modern processor. Programming projects will be carried out in the C language and the assembly language of a modern processor.

Recommended background: CS 2301 or CS 2303, or a significant knowledge of C/C++.

CS 2022/MA 2201. DISCRETE MATHEMATICS.*Cat. I*

This course serves as an introduction to some of the more important concepts, techniques, and structures of discrete mathematics, providing a bridge between computer science and mathematics.

Topics include functions and relations, sets, countability, groups, graphs, propositional and predicate calculus, and permutations and combinations.

Students will be expected to develop simple proofs for problems drawn primarily from computer science and applied mathematics.

Recommended background: none.

CS 2102. OBJECT-ORIENTED DESIGN CONCEPTS.*Cat. I*

This course introduces students to an object-oriented model of programming. Building from the design methodology covered in CS 1101/CS 1102, this course shows how programs can be decomposed into classes and objects. By emphasizing design, this course shows how to implement small defect-free programs and evaluate design decisions to select an optimal design under specific assumptions. Topics include inheritance, exceptions, interface, design by contract, basic design patterns, and reuse. Students will be expected to design, implement, and debug object-oriented programs composed of multiple classes and over a variety of data structures.

Recommended background: CS 1101 or CS 1102.

CS 2118. OBJECT-ORIENTED DESIGN CONCEPTS FOR BUSINESS APPLICATIONS.*Cat. I*

This course introduces students to an object-oriented model of programming, with an emphasis on the programming approaches useful in creating business applications. Building from the design methodology covered in CS 1101/ CS 1102, this course shows how programs can be decomposed into classes and objects. Students will be expected to design, implement, and debug object-oriented programs in Visual Basic. Topics include inheritance, building user interfaces, and database access. This course is primarily for non-CS majors with prior program design experience and an interest in building business applications.

Recommended background: CS 1101 or CS 1102.

Students may receive credit for only one of the following: MG 2720, MIS 2720, or CS 2118.

CS 2223. ALGORITHMS.*Cat. I*

Building on a fundamental knowledge of data structures, data abstraction techniques, and mathematical tools, a number of examples of algorithm design and analysis, worst case and average case, will be developed.

Topics include greedy algorithms, divide-and-conquer, dynamic programming, heuristics, and probabilistic algorithms. Problems will be drawn from areas such as sorting, graph theory, and string processing. The influence of the computational model on algorithm design will be discussed.

Students will be expected to perform analysis on a variety of algorithms.

Recommended background: CS 2102 and CS 2022.

CS 2301. SYSTEMS PROGRAMMING FOR NON-MAJORS.*Cat. I*

This course introduces the C programming language and system programming concepts to non-CS majors who need to program computers in their own fields. The course assumes that students have had previous programming experience. It quickly introduces the major concepts of the C language and covers manual memory management, pointers and basic data structures, the machine stack, and input/output mechanisms. Students will be expected to design, implement, and debug programs in C.

Recommended background: CS 1101 or CS 1102 or previous experience programming a computer. All Computer Science students and other students wishing to prepare for upper-level courses in Computer Science should take CS 2303 instead of CS 2301. Students who have credit for CS 2303 may not receive subsequent credit for CS 2301.

CS 2303. SYSTEMS PROGRAMMING CONCEPTS.*Cat. I*

This course introduces students to a model of programming where the programming language exposes details of how the hardware stores and executes software. Building from the design concepts covered in CS 2102, this course covers manual memory management, pointers, the machine stack, and input/output mechanisms. The course will involve large-scale programming exercises and will be designed to help students confront issues of safe programming with system-level constructs. The course will cover several tools that assist programmers in these tasks. Students will be expected to design, implement, and debug programs in C++ and C. The course presents the material from CS 2301 at a fast pace and also includes C++ and other advanced topics.

Recommended background: CS 2102 and/or substantial object-oriented programming experience.

CS 3013. OPERATING SYSTEMS.*Cat. I*

This course provides the student with an understanding of the basic components of a general-purpose operating system. Topics include processes, process management, synchronization, input/output devices and their programming, interrupts, memory management, resource allocation, and an introduction to file systems. Students will be expected to design and implement a large piece of system software in the C programming language.

Undergraduate credit may not be earned both for this course and for CS 502.

Recommended background: CS 2303 or CS 2301, and CS 2011.

CS 3041. HUMAN-COMPUTER INTERACTION.*Cat. I*

This course develops in the student an understanding of the nature and importance of problems concerning the efficiency and effectiveness of human interaction with computer-based systems.

Topics include the design and evaluation of interactive computer systems, basic psychological considerations of interaction, interactive language design, interactive hardware design, and special input/output techniques.

Students will be expected to complete several projects. A project might be a software evaluation, interface development, or an experiment.

Recommended background: CS 2102 or CS 2118.

CS 3043. SOCIAL IMPLICATIONS OF INFORMATION PROCESSING.*Cat. I*

This course makes the student aware of the social, moral, ethical, and philosophical impact of computers and computer-based systems on society, both now and in the future.

Topics include major computer-based applications and their impact, human-machine relationships, and the major problems of controlling the use of computers.

Students will be expected to contribute to classroom discussions and to complete a number of significant writing assignments.

This course is recommended for juniors and seniors.

Undergraduate credit may not be earned both for this course and for CS 505.

Recommended background: a general knowledge of computers and computer systems.

CS 3133. FOUNDATIONS OF COMPUTER SCIENCE.*Cat. I*

This course introduces the theoretical foundations of computer science. These form the basis for a more complete understanding of the proficiency in computer science.

Topics include computational models, formal languages, and an introduction to compatibility and complexity theory, including NP-completeness.

Students will be expected to complete a variety of exercises and proofs.

Undergraduate credit may not be earned both for this course and for CS 503.

Recommended Background: CS 2022 and CS 2223.

Students who have credit for CS 4121 cannot receive credit for CS 3133.

CS 3431. DATABASE SYSTEMS I.*Cat. I*

This course introduces the student to the design, use, and application of database management systems.

Topics include the relational data model, relational query languages, design theory, and conceptual data design and modeling for relational database design. Techniques that provide for data independence, and minimal redundancy will be discussed.

Students will be expected to design and implement database system applications.

Undergraduate credit may not be earned both for this course and for CS 4431 or CS 542.

Recommended background: CS 2022 and either CS 2102 or CS 2118.

CS 3516. COMPUTER NETWORKS.*Cat. I*

This course provides a broad view of computer networks. The course exposes students to all seven layers of OSI Reference Model while providing an introduction into newer topics such as wireless networking and Internet traffic concerns. The objective is to focus on an understanding of fundamental concepts of modern computer network architecture from a design and performance perspective. Topics covered include: physical layer considerations, network protocols, wide area networks, local area networks, wireless networks, switches and routing, congestion, Internet traffic and network security. Students will be expected to do extensive systems/network programming and will be expected to make use of simulation and measurement tools to gain an appreciation of current network design and performance issues. This course is also highly recommended for RBE and IMGD majors.

Recommended background: CS 2301 or CS 2303, or a significant knowledge of C/C++.

CS 3733. SOFTWARE ENGINEERING.*Cat. I*

This course introduces the fundamental principles of software engineering. Modern software development techniques and life cycles are emphasized.

Topics include requirements analysis and specification, analysis and design, architecture, implementation, testing and quality, configuration management, and project management.

Students will be expected to complete a project that employs techniques from the topics studied.

This course should be taken before any course requiring a large programming project.

Undergraduate credit may not be earned both for this course and for CS 509.

Recommended background: CS 2102.

CS 4032/MA 3257. NUMERICAL METHODS FOR LINEAR AND NONLINEAR SYSTEMS.*Cat. I*

This course provides an introduction to modern computational methods for linear and nonlinear equations and systems and their applications.

Topics covered include: solution of nonlinear scalar equations, direct and iterative algorithms for the solution of systems of linear equations, solution of nonlinear systems, the eigenvalue problem for matrices. Error analysis will be emphasized throughout.

Recommended background: MA 2071. An ability to write computer programs in a scientific language is assumed.

CS 4033/MA 3457. NUMERICAL METHODS FOR CALCULUS AND DIFFERENTIAL EQUATIONS.*Cat. I*

This course provides an introduction to modern computational methods for differential and integral calculus and differential equations.

Topics covered include: interpolation and polynomial approximation, approximation theory, numerical differentiation and integration, numerical solutions of ordinary differential equations. Error analysis will be emphasized throughout.

Recommended background: MA 2051. An ability to write computer programs in a scientific language is assumed. Undergraduate credit may not be earned for both this course and for MA 3255/CS 4031.

CS 4120. ANALYSIS OF ALGORITHMS.*Cat. II*

This course develops the skill of analyzing the behavior of algorithms.

Topics include the analysis, with respect to average and worst case behavior and correctness, of algorithms for internal sorting, pattern matching on strings, graph algorithms, and methods such as recursion elimination, dynamic programming, and program profiling.

Students will be expected to write and analyze programs.

Undergraduate credit may not be earned both for this course and for CS 504.

Recommended background: CS 2223 and some knowledge of probability.

This course will be offered in 2014-15 and in alternating years thereafter.

CS 4123. THEORY OF COMPUTATION.*Cat. II*

Building on the theoretical foundations from CS 3133, this course addresses the fundamental question of what it means to be "computable," including different characterizations of computable sets and functions.

Topics include the halting program, the Church-Turing thesis, primitive recursive functions, recursive sets, recursively enumerable sets, NP-completeness, and reducibilities.

Students will be expected to complete a variety of exercises and proofs.

Recommended Background: CS 3133.

This course will be offered in 2013-14 and in alternating years thereafter.

CS 4233. OBJECT-ORIENTED ANALYSIS AND DESIGN.*Cat. II*

This Software Engineering course will focus on the process of Object-Oriented Analysis and Design. Students will be expected to complete a large number of exercises in Domain Modeling, Use Case Analysis, and Object-Oriented Design. In addition, the course will investigate Design Patterns, which are elements of reusable object-oriented software designs. This course will survey a set of design patterns and consider how these patterns are described and used to solve design problems.

Recommended Background: CS 2303 and CS 3733.

This course will be offered in 2014-15 and in alternating years thereafter.

CS 4241. WEBWARE: COMPUTATIONAL TECHNOLOGY FOR NETWORK INFORMATION SYSTEMS.*Cat. I*

This course explores the computational aspects of network information systems as embodied by the World Wide Web (WWW). Topics include: languages for document design, programming languages for executable content, scripting languages, design of WWW based human/computer interfaces, client/server network architecture models, high level network protocols (e.g., http), WWW network resource discovery and network security issues.

Students in this course will be expected to complete a substantial software project (e.g., Java based user interface, HTML/CGI based information system, WWW search mechanisms).

Recommended background: CS 2102 and CS 3013.

CS 4341. INTRODUCTION TO ARTIFICIAL INTELLIGENCE.*Cat. I*

This course studies the problem of making computers act in ways which we call "intelligent".

Topics include major theories, tools and applications of artificial intelligence, aspects of knowledge representation, searching and planning, and natural language understanding.

Students will be expected to complete projects which express problems that require search in state spaces, and to propose appropriate methods for solving the problems.

Undergraduate credit may not be earned both for this course and for CS 534.

Recommended background: CS 2102, CS 2223, and CS 3133.

CS 4401. SOFTWARE SECURITY ENGINEERING.*Cat. I*

This course provides an introduction to the pitfalls and practices of building secure software applications. Topics will include threat modeling, secure software development, defensive programming, web security and the interaction between security and usability. The course focuses on the application level with minor attention to operating-system level security; network-level security is not covered. Assignments involve designing and implementing secure software, evaluating designs and systems for security-related flaws, and presentations on security issues or tools. All students will be required to sign a pledge of responsible conduct at the start of the course.

Recommended Background: CS3013 and CS3733. The course assumes nontrivial experience with C and Unix, familiarity with operating systems, filesystems, and databases, and experience with technologies for building web applications (from CS4241 or personal experience).

CS 4432. DATABASE SYSTEMS II.*Cat. II*

This course concentrates on the study of the internals of database management systems. Topics include: principles and theories of physical storage management, advanced query languages, query processing and optimization, index structures for relational databases, transaction processing, concurrency control, distributed databases, and database recovery, security, client server and transaction processing systems. Students may be expected to design and implement software components that make up modern database systems.

Undergraduate credit may not be earned both for this course and CS 542.

Recommended background: CS 3431 and CS 3733.

This course will be offered in 2013-14 and in alternating years thereafter.

CS 4445. DATA MINING AND KNOWLEDGE DISCOVERY IN DATABASES.*Cat. II*

This course provides an introduction to Knowledge Discovery in Databases (KDD) and Data Mining. KDD deals with data integration techniques and with the discovery, interpretation and visualization of patterns in large collections of data. Topics covered in this course include data warehousing and mediation techniques; data mining methods such as rule-based learning, decision trees, association rules and sequence mining; and data visualization. The work discussed originates in the fields of artificial intelligence, machine learning, statistical data analysis, data visualization, databases, and information retrieval. Several scientific and industrial applications of KDD will be studied.

Recommended background: MA 2611, CS 2223, and CS 3431, or CS 3733.

This course will be offered in 2014-15 and in alternating years thereafter.

CS 4513. DISTRIBUTED COMPUTING SYSTEMS.*Cat. I*

This course extends the study of the design and implementation of operating systems begun in CS 3013 to distributed and advanced computer systems.

Topics include principles and theories of resource allocation, file systems, protection schemes, and performance evaluation as they relate to distributed and advanced computer systems.

Students may be expected to design and implement programs that emphasize the concepts of file systems and distributed computing systems using current tools and languages.

Undergraduate credit may not be earned both for this course and for CS 502.

Recommended background: CS 3013, CS 3516, and system programming experience.

CS 4515. COMPUTER ARCHITECTURE.*Cat. II*

This course explores the architectural design of modern computer systems in terms of instruction sets and the organization of processors, controllers, memories, devices, and communication links. Topics include an overview of computer architectures and system components, theoretical foundations, instruction-level and thread-level pipelining, multifunction pipelines, multi-core systems, caching and memory hierarchies, and multi-core and parallel computer organization. Students may be expected to design and implement programs that simulate significant components of modern computer architectures.

Recommended background: CS 2011 or ECE 2049, and CS 3013.

This course will be offered in 2014-15 and in alternating years thereafter.

CS 4516. ADVANCED COMPUTER NETWORKS.*Cat. II*

This course provides an in-depth look into computer networks. While repeating some of the areas from CS 3516, the goal is to go deeper into computer networks topics. This in-depth treatment in topics such as routing, congestion control, wireless layer protocols and physical signaling considerations will require the use of basic queuing theory and probability to provide a more formal treatment of computer networks performance. Other topics covered include: LAN and WLAN technologies, mobile wireless networks, sensor networks, optical networks, network security, intrusion detection and network management. Students will be expected to do more sophisticated network programming than seen in CS 3516 and will conduct laboratory activities involving measuring the performance of modern networking applications running on both wired networks and infrastructure wireless networks.

Undergraduate credit may not be earned both for this course and for CS 513.

Recommended background: CS 3013, CS 3516, and knowledge of probability. The course assumes a familiarity with operating systems including Unix or Linux, and significant experience with C/C++.

This course will be offered in 2013-14 and in alternating years thereafter.

CS 4533. TECHNIQUES OF PROGRAMMING LANGUAGE TRANSLATION.

Cat. II

This course studies the compiling process for high-level languages.

Topics include lexical analysis, syntax analysis, semantic analysis, symbol tables, intermediate languages, optimization, code generation and run-time systems.

Students will be expected to use compiler tools to implement the front end, and to write a program to implement the back end, of a compiler for a recursive programming language.

Undergraduate credit may not be earned for both this course and for CS 544.

Recommended Background: CS 2102 and CS 3133.

This course will be offered in 2014-15 and in alternating years thereafter.

CS 4536. PROGRAMMING LANGUAGES.

Cat. II

This course covers the design and implementation of programming languages.

Topics include data structures for representing programming languages, implementing control structures (such as functions, recursion, and exceptions), garbage collection, and type systems. Students will be expected to implement several small languages using a functional programming language.

Recommended background: CS 2303, CS 3133, and experience programming in a functional language (as provided by CS 1101 or CS 1102).

Undergraduate credit may not be earned for both this course and CS 536.

This course will be offered in 2013-14 and in alternating years thereafter.

CS 4731. COMPUTER GRAPHICS.

Cat. I

This course studies the use of the computer to model and graphically render two- and three-dimensional structures.

Topics include graphics devices and languages, 2- and 3-D object representations, and various aspects of rendering realistic images.

Students will be expected to implement programs which span all stages of the 3-D graphics pipeline, including clipping, projection, arbitrary viewing, hidden surface removal and shading.

Undergraduate credit may not be earned both for this course and for CS 543.

Recommended background: CS 2223, CS 2303 and MA 2071.

CS 4732. COMPUTER ANIMATION.

Cat. II

This course provides an in-depth examination of the algorithms, data structures, and techniques used in modeling and rendering dynamic scenes. Topics include animation hardware and software, parametric blending techniques, modeling physical and articulated objects, forward and inverse kinematics, key-frame, procedural, and behavioral animation, and free-form deformation. Students will be expected to develop programs to implement low-level animation algorithms as well as use commercial animation tools to design and produce small to moderate sized animations.

Recommended background: CS 4731.

This course will be offered in 2014-15 and in alternating years thereafter.

CS 4802/BCB 4002. BIOVISUALIZATION.

Cat. II

This course will use interactive visualization to model and analyze biological information, structures, and processes. Topics will include the fundamental principles, concepts, and techniques of visualization (both scientific and information visualization) and how visualization can be used to study bioinformatics data at the genomic, cellular, molecular, organism, and population levels. Students will be expected to write small to moderate programs to experiment with different visual mappings and data types.

Recommended background: CS 2102, CS 2223, and one or more biology courses.

This course is being offered in 2014-15 and in alternating years thereafter.

CS 4803/BCB 4003. BIOLOGICAL AND BIOMEDICAL DATABASE MINING.

Cat. II

This course will investigate computational techniques for discovering patterns in and across complex biological and biomedical sources including genomic and proteomic databases, clinical databases, digital libraries of scientific articles, and ontologies. Techniques covered will be drawn from several areas including

sequence mining, statistical natural language processing and text mining, and data mining.

Recommended Background: CS 2102, CS 2223, MA 2610 or MA 2611, and one or more biology courses.

This course is being offered in 2013-14 and in alternating years thereafter.

ELECTRICAL AND COMPUTER ENGINEERING

The second digit in electrical engineering course numbers is coded as follows:

- 0 — Circuits
- 1 — Fields
- 2 — Electronic Circuits and Systems
- 3 — Signals and Communication Systems
- 4 — Available for Future Use
- 5 — Machines, Power Systems
- 6 — Professional and Miscellaneous
- 7 — Projects, Laboratory, Independent Study
- 8 — Computers
- 9 — Electronic Devices

NOTE: Courses listed in previous catalogs with "EE" as the prefix and the same course number as below are considered to be the SAME COURSE.

ECE 1799. FRONTIERS AND CURRENT ISSUES OF ELECTRICAL AND COMPUTER ENGINEERING.

Cat. I (1/6 unit semester course, spread out evenly over A and B terms)

This is a seminar-based course intended for First Year students seeking to understand the breadth of activities, career choices and technology that are considered to comprise Electrical and Computer Engineering. Students considering ECE as a major, both those who are "decided" as well as those who are "undecided" should enroll in ECE 1799. The class meets once a week during the fall semester (A & B terms).

Note: There are no "recommended" or "suggested" courses for this description.

ECE 2010. INTRODUCTION TO ELECTRICAL AND COMPUTER ENGINEERING.

The objective of this course is to introduce students to the broad field of electrical and computer engineering within the context of real world applications. This course is designed for first-year students who are considering ECE as a possible major or for non-ECE students fulfilling an out-of-major degree requirement.

The course will introduce basic electrical circuit theory as well as analog and digital signal processing methods currently used to solve a variety of engineering design problems in areas such as entertainment and networking media, robotics, renewable energy and biomedical applications. Laboratory experiments based on these applications are used to reinforce basic concepts and develop laboratory skills, as well as to provide system-level understanding. Circuit and system simulation analysis tools are also introduced and emphasized.

Topics: Basic concepts of AC/DC and Digital electrical circuits, power, linear circuit simulation and analysis, op-amp circuits, transducers, feedback, circuit equivalents and system models, first order transients, the description of sinusoidal signals and system response, analog/digital conversion, basic digital logic gates and combinatorial circuits.

Recommended Background: high school physics, and MA 1022 (concurrent).

ECE 2019. SENSORS, CIRCUITS, AND SYSTEMS.

Cat. I

This course investigates commonly used sensors such as resistive temperature sensors, capacitive touch sensors, and inductive motion sensors and actuators. Numerous applications are presented to motivate coverage of fundamental operating principles of circuit elements such as resistors, capacitors, and inductors; model the signals produced by these sensors; and analyze the circuits and systems used to amplify and process these signals. After a review of Kirchhoff's current and voltage laws, fundamental analysis techniques such as Thevenin and Norton's theorems and the superposition principle are used to model and analyze sensors, circuits, and systems. Concepts from analysis of linear, time-invariant continuous-time signals and systems are introduced as necessary, including Fourier series and characterization of systems such as filters in both the frequency domain (bandwidth, transfer function) and time domain (rise time, step response). Capacitance, inductance and mutual inductance are explored as energy storage elements, including consideration of resonance and

energy losses in power systems. Concepts will be reinforced with the use of laboratory exercises and computer simulation.

Recommended background: ECE 2010, MA 1024 (or equivalent), PH 1120/21.

Suggested background: MA 2051 (concurrent)

Note: Students who have received credit for ECE 2111 may not receive credit for ECE 2019.

ECE 2029. INTRODUCTION TO DIGITAL CIRCUIT DESIGN.

Cat. I

Digital circuits are the foundation upon which the computers, cell phones, and calculators we use every day are built. This course explores these foundations by using modern digital design techniques to design, implement and test digital circuits ranging in complexity from basic logic gates to state machines that perform useful functions like calculations, counting, timing, and a host of other applications. Students will learn modern design techniques, using a hardware description language (HDL) such as Verilog to design, simulate and implement logic systems consisting of basic gates, adders, multiplexers, latches, and counters. The function and operation of programmable logic devices, such as field programmable gate arrays (FPGAs), will be described and discussed in terms of how an HDL logic design is mapped and implemented. Experiments involving the design of combinational and sequential circuits will provide students a hands-on introduction to basic digital electrical engineering concepts and the skills needed to gain more advanced skills. In the laboratory, students will construct, troubleshoot, and test the digital circuits that they have developed using a hardware description language. These custom logic designs will be implemented using FPGAs and validated using test equipment.

Topics: Number representations, Boolean algebra, design and simplification of combinational circuits, arithmetic circuits, analysis and design of sequential circuits, and synchronous state machines.

Lab exercises: Design, analysis and construction of combinational and sequential circuits; use of hardware description languages to implement, test, and verify digital circuits; function and operation of FPGAs.

Recommended background: Introductory Electrical and Computer Engineering concepts covered in a course such as ECE 2010 or RBE 1001, and MA 1022.

Note: Students who have received credit for ECE 2022 may not receive credit for ECE 2029.

ECE 2049. EMBEDDED COMPUTING IN ENGINEERING DESIGN.

Cat. I

Embedded computers are literally everywhere in modern life. On any given day we interact with and depend on dozens of small computers to make coffee, run cell phones, take pictures, play music, control elevators, manage the emissions and antilock brakes in our automobile, control a home security system, and so on. Using popular everyday devices as case studies, students in this course are introduced to the unique computing and design challenges posed by embedded systems. Students will then solve real-world design problems using small, resource constrained (time/memory/power) computing platforms. The hardware and software structure of modern embedded devices and basic interactions between embedded computers and the physical world will also be covered in lecture and as part of laboratory experiments. In the laboratory, emphasis is placed on interfacing embedded processors with common sensors and devices (e.g. temperature sensors, keypads, LCD display, SPI ports, pulse width modulated motor controller outputs) while developing the skills needed to use embedded processors in systems design. This course is also appropriate for RBE and other engineering and CS students interested in learning about embedded system theory and design.

Topics: Number/data representations, embedded system design using C, microprocessor and microcontroller architecture, program development and debugging tools for a small target processor, hardware/software dependencies, use of memory mapped peripherals, design of event driven software, time and resource management, applications case studies.

Lab Exercises: Students will solve commonly encountered embedded processing problems to implement useful systems. Starting with a requirements list students will use the knowledge gained during the lectures to implement solutions to problems which explore topics such as user interfaces and interfacing with the physical world, logic flow, and timing and time constrained programming. Exercises will be performed on microcontroller and/or microprocessor based embedded systems using cross platform development tools appropriate to the target platform.

Recommended Background: ECE 2010 or equivalent knowledge in basic circuits, devices and analysis; and C language programming (CS 2301 or equivalent)

Suggested Background: ECE 2029 or equivalent knowledge of digital logic, logic signals and logic operations;

Note: Students who have received credit for ECE 2801 may not receive credit for ECE 2049.

ECE 2112. ELECTROMAGNETIC FIELDS.

Cat. I

The object of this course is a comprehensive treatment of electromagnetic engineering principles covering the entire application spectrum from static to dynamic field phenomena.

The starting point will be the basic electric and magnetic field definitions of Coulomb and Biot-Savart leading to Gauss's and Ampere's laws. They form the foundation of electro- and magnetostatics fields. Students will examine capacitive and inductive systems and relate them to lumped element circuit models. By introducing temporal and spatial magnetic flux variations, Faraday's law is established. The engineering implications of this law are investigated in terms of transformer and motor actions. Incorporation of the displacement current density into Ampere's law and combining it with Faraday's law will then culminate in the complete set of Maxwell's field equations. As a result of these equations, students will develop the concept of wave propagation in the time and frequency domain with practical applications such as wireless communication, radar, Global Positioning Systems, and microwave circuits.

Recommended background: ECE 2019.

ECE 2201. MICROELECTRONIC CIRCUITS I.

Cat. I

This course is the first of a two-course sequence in electronic circuit design. It begins with a substantive treatment of the fundamental behavior of semiconductor materials and moves on to the semiconductor diode, the bipolar transistor, and the field-effect transistor. Laboratory exercises are provided to reinforce the theory of operation of these devices. Numerous circuit applications are considered, including: power supplies, transistor amplifiers, and FET switches.

Topics include: the pn junction, diode operation, transducers, rectification, voltage regulation, limiting and clamping circuits, transistor operation, biasing, small-signal and large-signal models, transistors amplifiers, and switching applications.

Recommended background: ECE 2019.

ECE 2305. INTRODUCTION TO COMMUNICATIONS AND NETWORKS.

Cat. I

This course provides an introduction to the broad area of communications and networking, providing the context and fundamental knowledge appropriate for all electrical and computer engineers, as well as for further study in this area. The course is organized as a systems approach to communications and networking. Topics include key concepts and terminology (delay, loss, throughput, bandwidth, etc.), types of transmission media, addressing, switching, routing, networking principles and architectures, networking protocols, regulatory and applications issues.

Recommended background: ECE 2010.

ECE 2311. CONTINUOUS-TIME SIGNAL AND SYSTEM ANALYSIS.

Cat. I

This course provides an introduction to time and frequency domain analysis of continuous time signals and linear systems. Topics include signal characterization and operations; singularity functions; impulse response and convolution; Fourier series; the Fourier transform and its applications; frequency-domain characterization of linear, time-invariant systems such as filters; and the Laplace transform and its applications.

Recommended background: ECE 2019.

ECE 2312. DISCRETE-TIME SIGNAL AND SYSTEM ANALYSIS.

Cat. I

This course provides an introduction to the time and frequency domain analysis of discrete-time signals and linear systems. Topics include sampling and quantization, characterization of discrete-time sequences, the discrete-time Fourier transform, the discrete Fourier transform and its applications, the Z transform and its applications, convolution, characterization of FIR and IIR discrete-time systems, and the analysis and design of discrete-time filters. The course will include a focus on applications such as sampling and quantization, audio processing, navigation systems, and communications. Extensive use will be made of simulation tools including Matlab.

Recommended background: ECE 2311.

ECE 2799. ELECTRICAL AND COMPUTER ENGINEERING DESIGN.*Cat. I*

The goal of this course is to provide experience with the design of a system, component, or process. Basic sciences, mathematics, and engineering sciences are applied to convert resources to meet a stated objective. Fundamental steps of the design process are practiced, including the establishment of objectives and criteria, synthesis, analysis, manufacturability, testing, and evaluation. Student work in small teams and are encouraged to use creativity to solve specific but open-ended problems, and then present their results.

ECE 2799 is strongly recommended for all students as a preparation for the design element of the MQP. It is anticipated that ECE 2799 will be of most benefit to students when taken well in advance of the MQP (late sophomore year or early junior year).

Recommended background: At least three of ECE 2019, ECE 2029, ECE 2049, ECE 2311.

ECE 3113. INTRODUCTION TO RF CIRCUIT DESIGN.*Cat. I*

This course is designed to provide students with the basic principles of radio frequency (RF) circuit design. It concentrates on topics such as designing tuning and matching networks for analog and digital communication, satellite navigation, and radar systems.

After reviewing equivalent circuit representations for RF diodes, transistors, FETs, and their input/output impedance behavior, the course examines the difference between lumped and distributed parameter systems. Characteristics impedance, standing waves, reflection coefficients, insertion loss, and group delay of RF circuits will be explained.

Within the context of Maxwell's theory the course will then focus on the graphical display of the reflection coefficient (Smith Chart) and its importance in designing matching circuits. Students will learn the difference between SPICE and monolithic and microwave integrated circuit analysis, and design (MMICAD) modeling. Biasing and matching networks for single and multistage amplifiers in the 900 to 2,000 MHz range are analyzed and optimized in terms of input/output impedance matching, insertion loss, and groups delays.

Recommended background: ECE 2019, ECE 3204.

Suggested background: ECE 2112.

ECE 3204. MICROELECTRONIC CIRCUITS II.*Cat. I*

This course is the second of a two-course sequence in electronic circuit design. More complex circuits are analyzed and the effects of frequency and feedback are considered in detail. The course provides a comprehensive treatment of operational amplifier operation and limitations. The use of Bode plots to describe the amplitude and phase performance of circuits as a function of operating frequency is also presented. In addition, the concepts of analog signal sampling, analog-to-digital conversion and digital-to-analog conversion are presented along with techniques for interfacing analog and digital circuitry. Laboratory exercises are provided to reinforce student facility with the application of these concepts to the design of practical circuits.

Topics include: transducers; differential amplifiers, inverting/non-inverting amplifiers, summers, differentiators, integrators, passive and active filters, the Schmitt trigger, monostable and a-stable oscillators, timers, sample-and-hold circuits, A/D converters, and D/A converters.

Recommended background: Introductory electronic-circuit design and analog-signal analysis as found in ECE 2201 and ECE 2311.

ECE 3308. INTRODUCTION TO WIRELESS NETWORKS.*Cat. I*

This course is intended for students interested in obtaining a systems-level perspective of modern wireless networks. It starts with an overall understanding of telecommunication and computer communication networks. Then the fundamental theory of operation of wireless networks as well detailed description of example networks will be covered. Topics included in the course are an overview of computer networks, an overview of wireless network standards and products, radio channel modeling and medium access control, deployment of wireless infrastructures, and examples of voice- and data-oriented wireless networks using TDMA, CDMA, and CSMA access methods. Recommended background: MA 1022 and PH 1120; suggested background: ECE 2312 and ECE 2305. With extra work, this course can be successfully completed by non-ECE students; basic concepts of radio propagation, transmission, and medium access control will be introduced as needed.

ECE 3311. PRINCIPLES OF COMMUNICATION SYSTEMS.*Cat. I*

This course provides an introduction to analog and digital communications systems. The bandpass transmission of analog data is motivated and typical systems are analyzed with respect to bandwidth considerations and implementation techniques. Baseband and passband digital transmission systems are introduced and investigated. Pulse shaping and intersymbol interference criteria are developed in relation to the pulse rate transmission limits of bandlimited channels. Finally, digital carrier systems and line coding are introduced in conjunction with applications to modern modem transmission schemes.

Recommended background: MA 1024 and ECE 2312.

Suggested background: ECE 2305.

ECE 3501. ELECTRICAL ENERGY CONVERSION.*Cat. I*

This course is designed to provide a cohesive presentation of the principles of electric energy conversion for industrial applications and design. The generation, transmission and conversion of electric energy, as well as basic instrumentation and equipment associated with electric energy flow and conversion are analyzed.

Topics: Review of poly-phase circuits. Transducers and instrumentation for power and energy measurements. Rotating machines. Electromechanical transients and stability. Switchgear equipment. Selected laboratory experiments.

Recommended background: ECE 2019.

ECE 3503. POWER ELECTRONICS.*Cat. I*

This course is an introduction to analysis and design of power semiconductor circuits used in electric motor drives, control systems, robotics and power supply.

Topics: characteristics of thyristors and power transistors. Steady-state performance and operating characteristics, device rating and protection, commutation, gating circuits, ac voltage controllers, controlled rectifiers, dc/dc converters and dc/ac inverters. Laboratory exercises.

Recommended background: ECE 2019, ECE 2201 or equivalent.

ECE 3829. ADVANCED DIGITAL SYSTEM DESIGN WITH FPGAs.

This course covers the systematic design of advanced digital systems using FPGAs. The emphasis is on top-down design starting with high level models using a hardware description language (such as VHDL or Verilog) as a tool for the design, synthesis, modeling, test bench development, and testing and verification of complete digital systems. These types of systems include the use of embedded soft core processors as well as lower level modules created from custom logic or imported IP blocks. Interfaces will be developed to access devices external to the FPGA such as memory or peripheral communication devices. The integration of tools and design methodologies will be addressed through a discussion of system on a chip (SOC) integration, methodologies, design for performance, and design for test.

Topics: Hardware description languages, system modeling, synthesis, simulation and testing of digital circuits; Design integration to achieve specific system design goals including architecture, planning and integration, and testing; Use of soft core and IP modules to meet specific architecture and design goals. Laboratory exercises: Students will design and implement a complete sophisticated embedded digital system on an FPGA. HDL design of digital systems including lower level components and integration of higher level IP cores, simulating the design with test benches, and synthesizing and implementing these designs with FPGA development boards including interfacing to external devices.

Recommended background: ECE 2029 and ECE 2049

Students who have received credit for ECE 3810 may not receive credit for ECE 3829.

ECE 3849. REAL-TIME EMBEDDED SYSTEMS.

This course continues the embedded systems sequence by expanding on the topics of real-time software and embedded microprocessor system architecture. The software portion of this course focuses on solving real-world problems that require an embedded system to meet strict real-time constraints with limited resources. On the hardware side, this course reviews and expands upon all the major components of an embedded microprocessor system, including the CPU, buses, memory devices and peripheral interfaces. New IO standards and devices are introduced and emphasized as needed to meet system design, IO and performance goals in both the lecture and laboratory portion of the course.

Topics: Cross-compiled software development, embedded system debugging, multitasking, real-time scheduling, inter-task communication, software design for deterministic execution time, software performance analysis and optimization.

tion, device drivers, CPU architecture and organization, bus interface, memory management unit, memory devices, memory controllers, peripheral interfaces, interrupts and interrupt controllers, direct memory access. Laboratory exercises: Programming real-time applications on an embedded platform running a real-time operating system (RTOS), configuring hardware interfaces to memory and peripherals, bus timing analysis, device drivers.

Recommended background: ECE 2029 and ECE 2049.

ECE/BME 4011. BIOMEDICAL SIGNAL ANALYSIS.

Cat. II

Introduction to biomedical signal processing and analysis. Fundamental techniques to analyze and process signals that originate from biological sources: ECGs, EMGs, EEGs, blood pressure signals, etc. Course integrates physiological knowledge with the information useful for physiologic investigation and medical diagnosis and processing. Biomedical signal characterization, time domain analysis techniques (transfer functions, convolution, auto- and cross-correlation), frequency domain (Fourier analysis), continuous and discrete signals, deterministic and stochastic signal analysis methods. Analog and digital filtering.

Recommended background: ECE 2311, ECE 2312, or equivalent.

This course will be offered in 2014-15, and in alternating years thereafter.

ECE/BME 4023. BIOMEDICAL INSTRUMENTATION DESIGN.

Cat. II

This course builds on the fundamental knowledge of instrumentation and sensors. Lectures cover the principles of designing, building and testing analog instruments to measure and process biomedical signals. The course is intended for students interested in the design and development of electronic bioinstrumentation. Emphasis is placed on developing the student's ability to design a simple medical device to perform real-time physiological measurements.

Recommended background: BME 3012, BME 3013, ECE 2010 and ECE 2019.

This course will be offered in 2014-15, and in alternating years thereafter.

ECE 4305. SOFTWARE-DEFINED RADIO SYSTEMS AND ANALYSIS.

Cat. I

This course provides students with hands-on exposure to the design and implementation of modern digital communication systems using software-defined radio technology. The prototyping and real-time experimentation of these systems via software-defined radio will enable greater flexibility in the assessment of design trade-offs as well as the illustration of "real world" operational behavior. Performance comparisons with quantitative analytical techniques will be conducted in order to reinforce digital communication system design concepts. In addition to laboratory modules, a final course project will synthesize topics covered in class. Course topics include software-defined radio architectures and implementations, digital signaling and data transmission analysis in noise, digital receiver structures (matched filtering, correlation), multicarrier communication techniques, radio frequency spectrum sensing and identification (energy detection, matched filtering), and fundamentals of radio resource management.

Recommended background: ECE3311, MA2621, familiarity with Simulink, familiarity with general programming.

ECE 4703. REAL-TIME DIGITAL SIGNAL PROCESSING.

Cat. I

This course provides an introduction to the principles of real-time digital signal processing (DSP). The focus of this course is hands-on development of real-time signal processing algorithms using audio-based DSP kits in a laboratory environment. Basic concepts of DSP systems including sampling and quantization of continuous time signals are discussed. Tradeoffs between fixed-point and floating-point processing are exposed. Real-time considerations are discussed and efficient programming techniques leveraging the pipelined and parallel processing architecture of modern DSPs are developed. Using the audio-based DSP kits, students will implement real-time algorithms for various filtering structures and compare experimental results to theoretical predictions.

Recommended background: ECE 2049, ECE 2312, some prior experience in C programming.

Suggested background: ECE 3311.

ECE 4801. COMPUTER ORGANIZATION AND DESIGN.

Cat. I

This course focuses on the computer organization and architectural design of standalone embedded and high-performance microprocessor systems. This course covers performance metrics, machine level representation of information, the assembly level interface, memory system organization and architecture,

computer input/output, instruction set architecture (ISA) design, single cycle and multicycle CPU datapath and controlpath design as well as more advanced level topics such as pipelining, interrupts, cache and memory system design. Special attention will be paid into measuring architectural performance and into improving computer architectures at various levels of the design hierarchy to reach optimal performance. The course will include several hands-on projects and laboratory components where students will be required to perform simulations of CPU designs using architectural simulation tools such as MIPS Simulators and SimpleScalar.

Recommended Background: ECE 3849

Suggested Background: ECE 3829

ECE 4902. ANALOG INTEGRATED CIRCUIT DESIGN.

Cat. I

This course introduces students to the design and analysis of analog integrated circuits such as operational amplifiers, phase-locked loops, and analog multipliers.

Topics: integrated circuit building blocks: current mirrors and sources, differential amplifiers, voltage references and multipliers, output circuits. Computer-aided simulation of circuits. Layout of integrated circuits. Design and analysis of such circuits as operational amplifiers, phase-locked loops, FM detectors, and analog multipliers. Laboratory exercises.

Recommended background: familiarity with the analysis of linear circuits and with the theory of bipolar and MOSFET transistors. Such skills are typically acquired in ECE 3204.

Suggested background: ECE 4904.

ECE 4904. SEMICONDUCTOR DEVICES.

Cat. II

The purpose of this course is to introduce students to the physics of semiconductor devices and to show how semiconductor devices operate in typical linear and nonlinear circuit applications. This material complements the electronics sequence of courses and will draw illustrative examples of electronic circuit applications from other courses. Topics: carrier transport processes in semiconductor materials. Carrier lifetime. Theory of p-n junctions. Bipolar transistors internal theory, dc characteristics, charge control, Ebers-Moll relations; high frequency and switching characteristics, hybrid- π model; n- and p-channel MOSFETS, CMOS.

Recommended background: ECE 2201. Suggested background: ECE 3204 (helpful but not necessary).

Students who have received credit for ECE 3901 may not receive credit for ECE 4904.

This course will be offered in 2014-15, and in alternating years thereafter.

ENGINEERING SCIENCE INTERDISCIPLINARY

ES 1020. INTRODUCTION TO ENGINEERING.

Cat. I

This course is for first year students with an interest in engineering. The course focuses on the design process. Students are introduced to engineering through case studies and reverse engineering activities. Students will learn the steps in the design process and how engineers use this process to create new devices. Teams of students are then assigned a design project that culminates in building and evaluating a prototype in their design. Results of the design project are presented in both oral and written reports. This course does not require any prior engineering background.

Note: This course can be used towards the Engineering Science and Design distribution requirement in IE, ME, and MFE.

ES 1310. INTRODUCTION TO COMPUTER AIDED DESIGN.

Cat. I

This basic course in engineering graphical communications provides a background for all engineering disciplines. The ability to create and interpret standard, well-integrated detail and assembly drawings is a necessity for engineers to communicate ideas. Computer Aided Design software will be used as a tool for creating these engineering design drawings. Multiview and pictorial graphics techniques are integrated with standards for dimensioning, sectioning, and generating detailed engineering drawings. Emphasis is placed on relating drawings to the required manufacturing processes. The design process and aids to creativity are combined with graphics procedures to incorporate functional design requirements in the geometric model.

No prior engineering graphics or software knowledge is assumed.

ES 2001. INTRODUCTION TO MATERIAL SCIENCE.*Cat. I*

A beginning course in understanding the structures and properties of metals, ceramics and plastics, in the selection and in the working and heat treating of materials. A course of interest to any engineer, scientist or person involved with materials.

The underlying fundamental theme of materials science is structure-property relationship. Structures covered range from the subatomic, or nuclear level, through the microscopic world to the macroscopic, or gross point of view. Properties investigated may be chemical, mechanical, thermal, nuclear, electrical or optical. The selection, working and thermal treatments of materials are also related to structural changes and thus property alterations.

No formal laboratory, but ample opportunity exists for the student to experiment with the fundamentals presented on a voluntary basis.

Recommended background: prior knowledge of college-level chemistry.

ES 2501. INTRODUCTION TO STATIC SYSTEMS.*Cat. I*

This is an introductory course in the engineering mechanics sequence that serves as a foundation for other courses in mechanical engineering. In this course, students will learn to solve for forces and couples in systems that are not accelerating and which are statically determinate. They will also learn to draw shear and bending moment diagrams for beams and how to calculate the centroid and the moment of inertia for areas.

This course qualifies as one of the three courses that mechanical engineering students must complete in the mechanical systems stem.

Topics normally covered include: forces, moments of forces and couples; free body diagrams; equilibrium; friction; distributed loadings; pin trusses; beams and beam loading; suspended cables; first and second moment of area. Force analysis of submerged bodies is addressed in this course.

Recommended background: Differential and Integral Calculus (MA 1022) and elementary vector algebra.

ES 2502. STRESS ANALYSIS.*Cat. I*

The first course in engineering mechanics that addresses stress analysis of mechanical and structural elements.

Topics covered include: stresses, strains and deformations in bars, beams, and torsional elements; principal stresses, transverse shear stresses, buckling.

Recommended background: Statics (ES 2501) and elementary vector algebra.

ES 2503. INTRODUCTION TO DYNAMIC SYSTEMS.*Cat. I*

Engineers should be able to formulate and solve problems that involve forces that act on bodies which are moving. This course deals with the kinematics and dynamics of particles and rigid bodies which move in a plane.

Topics covered will include: kinematics of particles and rigid bodies, equations of motion, work-energy methods, and impulse and momentum. In this course a basic introduction to mechanical vibration is also discussed. Basic equations will be developed with respect to translating and rotating coordinate systems.

Recommended background: Statics (ES 2501 or CE 2000).

ES 2800. ENVIRONMENTAL IMPACTS OF ENGINEERING DECISIONS.*Cat. II*

Engineering decisions can affect the environment on local and global scales. This course will introduce students to concepts that will make them aware of the ramifications of their engineering decisions, and is intended for engineering students of all disciplines. Specific topics the course will cover include: environmental issues, waste minimization, energy conservation, water conservation and reuse, regulations (OSHA, TSCA, RCRA, etc.), lifecycle assessment, risk assessment, sustainability, design for the environment, and environmental impact statements. Energy and mass balances will be applied to activities that impact the environment. Instruction will be provided through lectures, practitioner seminars, and a term project. Intended audience: all engineering majors desiring a general knowledge of the environmental impacts of engineering decisions.

Recommended background: elementary college chemistry; second year students.

This course will be offered in 2014-15, and in alternating years thereafter.

ES 3001. INTRODUCTION TO THERMODYNAMICS.*Cat. I*

This course emphasizes system and control volume modeling using the First and Second Laws of Thermodynamics.

Topics include: properties of simple substances, an introduction to availability, cycle analysis.

ES 3002. MASS TRANSFER.*Cat. I*

This course introduces the student to the phenomena of diffusion and mass transfer. These occur in processes during which a change in chemical composition of one or more phases occurs. Diffusion and mass transfer can take place in living systems, in the environment, and in chemical processes. This course will show how to handle quantitative calculations involving diffusion and/or mass transfer, including design of process equipment.

Topics may include: fundamentals of diffusional transport, diffusion in thin films; unsteady diffusion; diffusion in solids; convective mass transfer; dispersion; transport in membranes; diffusion with chemical reaction; simultaneous heat and mass transfer; selected mass transfer operations such as absorption, drying, humidification, extraction, crystallization, adsorption, etc.

Recommended background: fundamentals of chemical thermodynamics, fluid flow and heat transfer; ordinary differential equations (MA 2051 or equivalent).

ES 3003. HEAT TRANSFER.*Cat. I*

To provide an understanding of fundamental concepts of heat fluxes, to develop understanding of the coupling of fluid mechanics and thermodynamics, and to provide experience in modeling engineering systems and predicting their behavior.

Topics covered include: steady-state and transient conduction exemplified by heat transfer to and from buried pipes, heat losses through furnace walls, response of thermocouple devices, and the effect of adding fins to increase heat transfer rates. Contact resistance. Natural and forced convection. Heat exchanger analysis and design. Convection accompanied by boiling and condensation. Blackbody radiation. Thermal radiation within an enclosure including diffuse and gray surfaces. Radiation accompanied by conduction and with motion.

Recommended background: Ordinary Differential Equations (MA 2051).

ES 3004. FLUID MECHANICS.*Cat. I*

A study of the fundamental laws of statics, kinematics and dynamics applied to fluid mechanics. The course will include fluid properties, conservation of mass, momentum and energy as applied to real and ideal fluids. Laminar and turbulent flows, fluid resistance and basic boundary layer theory will also be considered.

Recommended background: basic physics, basic differential equations and vectors.

ES 3005. RADIATION HEAT TRANSFER APPLICATIONS.*Cat. I*

Radiation Heat Transfer Applications will develop the student's knowledge of radiation heat transfer. Fundamentals of radiation will be covered. The primary focus of the course will be on applications of radiation heat transfer in the built environment. Two key areas will be solving radiation problems related to building fires (infrared) and building environmental heating (solar).

Recommended background: MA 2051.

This course will be offered in 2014-15.

ES 3011. CONTROL ENGINEERING I.*Cat. I*

Characteristics of control systems. Mathematical representation of control components and systems. Laplace transforms, transfer functions, block and signal flow diagrams. Transient response analysis. Introduction to the root-locus method and stability analysis. Frequency response techniques including Bode, polar, and Nichols plots.

This sequence of courses in the field of control engineering (ES 3011) is generally available to all juniors and seniors regardless of department. A good background in mathematics is required; familiarity with Laplace transforms, complex variables and matrices is desirable but not mandatory. All students taking Control Engineering I should have an understanding of ordinary differential equations (MA 2051 or equivalent) and basic physics through electricity and magnetism (PH 1120/1121). Control Engineering I may be considered a terminal course, or it may be the first course for those students wishing to do extensive work in this field. Students taking the sequence of two courses will be prepared for graduate work in the field.

Recommended background: Ordinary Differential Equations (MA 2051) and Electricity and Magnetism (PH 1120, PH 1121).

ES 3323. ADVANCED COMPUTER AIDED DESIGN.*Cat. I*

This course exposes the student to computer aided engineering design and geometric modeling using Unix based graphic workstations. The use of geometric models for applications in computer aided mechanical design, engineering analysis and manufacturing is emphasized. Topics may include mechanical design, solid and feature based modeling, variational and parametric design, physical properties, assembly modeling, numerical control, mechanisms, and other analytical methods in engineering design.

Recommended background: familiarity with drafting standards (ES 1310), mechanical systems (ES 2501 or CE 2000, ES 2503) and kinematics (ME 3310) is assumed. Additional background in strength of materials (ES 2502 or CE 2001), machine design (ME 2300, ME 3320), machining and manufacturing methods (ME 1800) and higher level programming capability (CS 1101 or CS 1102) is helpful.

FIRE PROTECTION ENGINEERING

FP 3070. FUNDAMENTALS OF FIRESAFETY ANALYSIS.*Cat. I*

This course introduces students of different technical disciplines to analytical methods and techniques to address problems of fire, explosions, or hazardous incidents. Emphasis will be placed on understanding the physical concepts of the problem and their interactions. Quantification will adapt existing procedures to appropriate levels of theoretical and empirical methods in the field of fire science and engineering. Computer applications will be incorporated.

Recommended background: mathematics through differential equations; engineering science; fluid mechanics.

FP 3080. INTRODUCTION TO BUILDING FIRES SAFETY SYSTEM DESIGN.*Cat. I*

This course introduces principles and applications of building fire safety design. Topics include the interaction between fire, the building, and building occupants; systems that are used to detect, suppress, and control the spread of fire; and systems that facilitate the safe evacuation of occupants during fire. Building code requirements and engineering methods for analysis and design of building fire safety systems will be explored.

Recommended background: Thermodynamics.

This course will be offered in 2014-15.

Graduate Fire Protection Engineering Courses of Interest to Undergraduates

FPE 520. FIRE MODELING.

(Prerequisite: FPE 521 or special permission of the instructor.) Advanced topics in fire dynamics, combustion and compartment fire behavior will be discussed within a framework of modeling fire and its effects. Topics include computer modeling of pre-flashover and post-flashover compartment fires, burning characteristics of polymers and other fuels, the effect of fire retardants, products of combustion generation, flame spread models, plume and ceiling jet models and overall toxicity assessment. Some familiarity with computer programming is recommended.

FPE 521. FIRE DYNAMICS I.

(Prerequisites: Undergraduate chemistry, thermodynamics [or physical chemistry], fluid mechanics and heat transfer.) This course introduces students to fundamentals of fire and combustion and is intended to serve as the first exposure to fire dynamics phenomena. The course includes fundamental topics in fire and combustion such as thermodynamics of combustion, fire chemistry, premixed and diffusion flames, solid and liquid burning, ignition, plumes and ceiling jets. These topics are then used to develop the basic for introducing compartment fire behavior, pre and post-flashover conditions and smoke movement.

FPE 553. FIRE PROTECTION SYSTEMS.

(Prerequisites: Undergraduate courses in chemistry, fluid mechanics and either thermodynamics or physical chemistry.) This course provides an introduction to automatically activated fire suppression and detection systems. A general overview is presented of relevant physical and chemical phenomena and commonly used hardware in automatic sprinkler, gaseous agent, foam and dry chemical systems. Typical contemporary installations and current installation and approval standards are reviewed.

FPE 554. ADVANCED FIRE SUPPRESSION.

(Prerequisite: FPE 553 or special permission of instructor.) Advanced topics in suppression systems analysis and design are discussed with an aim toward developing a performance based understanding of suppression technology. Automatic sprinkler systems are covered from the standpoint of predicting actuation times, reviewing numerical methods for hydraulic analyses of pipe flow networks and understanding the phenomenology involved in water spray suppression. Special suppression systems are covered from the standpoint of two phase and non-Newtonian pipe flow and simulations of suppression agent discharge and mixing in an enclosure.

FPE 555. DETECTION, ALARM AND SMOKE CONTROL.

(Prerequisites: FPE 553. Also FPE 521 and FPE 571 which can be taken concurrently.)

Principles of fire detection and using flame, heat and smoke detector technology are described. Fire alarm technology and the electrical interface with fire/smoke detectors are reviewed in the context of contemporary equipment and installation standards. Smoke control systems based on buoyancy and HVAC principles are studied in the context of building smoke control for survivability and safe egress.

FPE 563 (OIE 541). OPERATIONS RISK MANAGEMENT.

Risk Management is highly interdisciplinary drawing upon systems engineering and managerial decision making and finance. The basics of risk management including hazard analysis, risk assessment, risk control and risk financing are covered. The course is self-contained and includes material from engineering economy, risk assessment and decision analysis. Group projects can draw from fire protection engineering, hazardous waste management and product liability. The projects serve to emphasize important techniques for quantifying risk and the challenge of integrating risk assessment with managerial decision making.

FPE 570. BUILDING FIRESAFETY I.

This course focuses on the presentation of qualitative and quantitative means for firesafety analysis in buildings. Fire test methods, fire and building codes and standards of practice are reviewed in the context of a systematic review of firesafety in proposed and existing structures.

FPE 571. PERFORMANCE-BASED DESIGN.

(Prerequisites: FPE 553, FPE 521 and FPE 570 or special permission of instructor.) This course covers practical applications of fire protection engineering principles to the design of buildings. Both compartmented and non-compartmented buildings will be designed for criteria of life safety, property protection, continuity of operations, operational management and cost. Modern analytical tools as well as traditional codes and standards are utilized. Interaction with architects, code officials and an awareness of other factors in the building design process are incorporated through exercises and a design studio.

FPE 572. FAILURE ANALYSIS.

(Prerequisites: FPE 570, FPE 521 and FPE 553 or special permission of the instructor.) Development of fire investigation and reconstruction as a basis for evaluating, and improving firesafety design. Accident investigation theory and failure analysis techniques such as fault trees and event sequences are presented. Fire dynamics and computer modeling are applied to assess possible fire scenarios and the effectiveness of fire protection measures. The products liability aspects of failure analysis are presented. Topics include products liability law, use of standard test methods, warnings and safe product design. Application of course materials is developed through projects involving actual case studies.

FPE 573. INDUSTRIAL FIRE PROTECTION.

(Prerequisites: FPE 553, FPE 521 or special permission of instructor.) Principles of fire dynamics, heat transfer and thermodynamics are combined with a general knowledge of automatic detection and suppression systems to analyze fire protection requirements for generic industrial hazards. Topics covered include safe separation distances, plant layout, hazard isolation, smoke control, warehouse storage and flammable liquid processing and storage. Historical industrial fires influencing current practice on these topics are also discussed.

FPE 575. EXPLOSION PROTECTION.

Principles of combustion explosions are taught along with explosion hazard and protection applications. Topics include a review of flammability limit concentrations for flammable gases and dusts; thermochemical equilibrium calculations of adiabatic closed vessel deflagration pressures and detonation pressures and velocities; pressures development as a function of time for closed vessels and vented enclosures; the current status of explosion suppression technology; and vapor cloud explosion hazards.

FPE 580. SPECIAL PROBLEMS.

Individual or group studies on any topic relating to fire protection may be selected by the student and approved by the faculty member who supervises the work.

FPE 581. SEMINAR.

Reports on current advances in the various branches of fire protection.

FPE 587. FIRE SCIENCE LABORATORY.

(Prerequisite: FPE 521.) This course provides overall instruction and hands-on experience with fire science related experimental measurement techniques. The objective is to expose students to laboratory-scale fire experiments, standard fire tests and state-of-the-art measurement techniques. The Lateral Ignition and Flame Transport (LIFT) apparatus, state-of-the-art smoke detection systems, closed-up flashpoint tests and gas analyzers are among the existing laboratory apparatus. Fire related measurement techniques for temperature, pressure, flow and velocity, gas species and heat fluxes, infrared thermometry, Laser Doppler Velocimetry (LVD) and Laser Induced Fluorescence (LIF) will be reviewed.

FPE 590. M. S. THESIS.**FPE 690. PH.D. DISSERTATION.**

HUMANITIES AND ARTS

ART HISTORY/ARCHITECTURE (AR)

AR 1100. ESSENTIALS OF ART.

Cat. I

This course provides an introduction to the basic principles of two and three-dimensional visual organization. The course focuses on graphic expression, idea development, and visual literacy. Students will be expected to master basic rendering skills, perspective drawing, concept art, and storyboarding through traditional and/or computer-based tools.

AR 1101. DIGITAL IMAGING AND COMPUTER ART.

Cat. I

This course focuses on the methods, procedures and techniques of creating and manipulating images through electronic and digital means. Students will develop an understanding of image alteration. Topics may include color theory, displays, modeling, shading, and visual perception.

Recommended background: AR 1100.

AR 1111. INTRODUCTION TO ART HISTORY.

Cat. I

How do we understand a work of art? Through readings and the study of objects at the Worcester Art Museum, the student will survey the major developments in world art and be introduced to various critical perspectives in art history. Students will learn how art historians work with primary materials and formulate arguments. No previous knowledge of art is required. (Formerly HU 1014.)

AR/IMGD 2101. 3D MODELING I.

Cat. I

3D modeling is concerned with how to render created forms in a virtual environment. This course covers 3D modeling applications in video game development, film production, product design and fine art. Topics may include creating and armature, modeling organic and hard surfaces and sculpting using traditional techniques applied to a 3D model. Students will create works suitable for presentation in professional quality portfolio.

Recommended background: AR1100 and AR1101.

AR 2111. MODERN ART.

Cat. I

The successive phases of modern art, especially painting, are examined in light of the late-19th-century break with the 600-year old tradition of representation.

Topics covered include: non-objective art and abstraction—theory and practice, primitivism in modern art, surrealism and the irrational, the impact of photography on modern painting, cubism and collage, regionalism and abstract expressionism as American art forms, Pop art and popular culture, and the problem of concept versus representation in art. (Formerly AR 2300.)

AR 2114. MODERN ARCHITECTURE IN THE AMERICAN ERA, 1750-2001 AND BEYOND.

Cat. I

This course studies, in a non-technical way, America's buildings and places, in the context of world architecture in modern times. The history of American architecture was shaped by the forces that shaped America, from its political emergence in the eighteenth century to the post-9/11 era. These forces include dreams of social and spiritual perfection; a tight and conflicted relation with nature; and the rise and spread of industrial capitalism. The same forces created

the Modern Movement in architecture. How are modernism and American architecture interrelated? Illustrated lectures, films, and tours of Worcester architecture explore the question, while training students in the methods of architectural history and criticism.

Students who have taken AR 2113, Topics in 19th- and 20th-Century Architecture, since the 2000-2001 academic year MAY NOT take AR 2114 for credit.

AR/IMGD 2201. THE ART OF ANIMATION I.

Cat. I

This course examines the fundamentals of computer generated 2D and 3D modeling and animation as they apply to creating believable characters and environments. Students will learn skeletal animation and traditional polygonal animation, giving weight and personality to characters through movement, environmental lighting, and changing mood and emotion. Students will be expected to master the tools of 3D modeling and skinning, and scripting of behaviors.

Recommended background: AR 1101.

AR/IMGD 2700. DIGITAL PAINTING.

This course covers painting techniques as applied to texturing a 3D asset or illustration/conceptual art. Topics include are color theory, study of form, lighting, applying traditional painting ideas to the digital format, character design, generation of ideas and a history of digital painting. Each class features a demonstration on the topic followed by individual critique and study. Students work towards a final project that may be suitable for an Art portfolio.

Recommended Background: AR 1101 (Digital imaging and Computer Art); AR 2202 (Figure Drawing)

AR 3112. MODERNISM, MASS CULTURE, AND THE AVANT-GARDE.

Cat. I

What is the role of art to be in the modern world? Can art be a vehicle for social change, or should art be a self-critical discipline that pursues primarily aesthetic ends? What is the relationship between art and mass culture? Using primary sources, this course focuses on some of the theorists and artistic trends since the mid-nineteenth century that have sought to resolve this dilemma. These include: Ruskin, Morris and the Arts and Crafts Movement; Art for Art's Sake; the German Werkbund and the Bauhaus; American industrial design.

AR/ID 3150. LIGHT, VISION AND UNDERSTANDING.

Cat. II

By using material from the sciences and the humanities, this course examines the ways in which ideas of knowledge and of human nature have been fashioned. The specific topics include physical theories about light, biological and psychological theories of visual perception, and artistic theories and practices concerned with representation. The mixing of material from different academic disciplines is deliberate, and meant to counter the notion that human pursuits are "naturally" arranged in the neat packages found in the modern university. The course draws upon the physical and social sciences, and the humanities, to examine how those fields relate to one another, and how they produce knowledge and self-knowledge. Cultural as well as disciplinary factors are assessed in this process.

Light, Vision and Understanding is conducted as a seminar. The diverse collection of reading materials includes a number of primary texts in different fields. In addition, the students keep a journal in which they record the results of numerous individual observations and experiments concerning light and visual perception. The course can fit into several Humanities and Arts topic areas as well as serve as a starting point for an IQP. There are no specific requirements for this course, although some knowledge of college-level physics, as well as acquaintance with the visual arts, is helpful.

This course will be offered in 2014-15 and in alternating years thereafter.

AR/IMGD 3101. 3D MODELING II.

This course will build upon the skills learned in 3D MODELING with studies in life drawing/anatomy study and application towards completed character models. Students will create high resolution sculpts for real time game environments and animation. Topics covered will be character design as it applies to 3D MODELING, creating realistic design sculpts and incorporating them into a game environment as well as the study of anatomy as it applies to organic modeling.

Recommended Background: AR 1101, IMGD/AR 2101, AR 2202

AR/IMGD 3201. ANIMATION II.

This course will build upon the techniques learned in IMGD 2201/AR 2201. Students will learn advanced animation techniques applied to lip syncing, facial movement, emotion communication, and body language. Topics covered may include character rigging, biped and quadruped animation, and animation pipelines. Students will create animated scenes for narrative video and/or real time game environments.

Recommended Background: AR/IMGD 2201, AR/IMGD 2202.

Suggested additional background: IMGD 2005.

AR/IMGD 3700. CONCEPT ART AND CREATIVE ILLUSTRATION.

This course covers drawing as it applies to concept art and illustration. The course begins with study of a human model and representational drawing. Following this, students work on drawing from the mind and applying the lessons learned from the figure drawing to creating concept art and illustration. Topics covered are shape recognition and recalling, inventing from the mind, creative starters, study of form and light, visual composition and developing a personal approach, working with individual strengths to create a compelling visual design. Students create a series of concept art exercises and apply these skills towards a personal project of their own.

Recommended Background: AR 2202 (Figure Drawing); IMGD/AR 2700 (Digital Painting)

ENGLISH (EN)**EN 1221. INTRODUCTION TO DRAMA: THEATRE ON THE PAGE AND ON THE STAGE.**

Cat. I

This introductory course will give the student an understanding of the forms of drama, the styles of theatre performance and production, and the emergence of new forms and styles. Research and writing projects, and performance activities will offer the student experience in the theory and practice studied in the course.

EN 1222. SHAKESPEARE IN THE AGE OF ELIZABETH.

Cat. I

This course is an introduction to Shakespeare, his theatre, and some important concepts of his world. Students will have the opportunity to sample representative Shakespearean tragedies, comedies, and histories. In addition to class discussions and scene work, students will be able to enhance their readings by analyzing video recordings of the plays.

EN 1231. AMERICAN LITERATURE: BEGINNINGS THROUGH HAWTHORNE.

Cat. I

This survey course covers American literature from its beginnings in the colonial period through the works of Nathaniel Hawthorne in the early nineteenth century. Students will read literary works in a variety of genres (narratives, poems, sermons, plays, stories, and novels) that reflect the emerging nation's struggle for cultural self-definition. Topics will include the literature of travel and discovery, the faith of the colonial founders, the quest for a distinctive national literature, and the rise of early American fiction.

EN 1242. INTRODUCTION TO ENGLISH POETRY.

Cat. I

This course surveys the poems of our language. From the Anglo-Saxon poems to the popular verse of Tennyson, the songs and the poets are legion: Chaucer, Raleigh, Spenser, Marlowe, Shakespeare, Jonson, Donne, Herrick, Milton, Blake, Wordsworth, Coleridge, Byron, Keats, Tennyson, Browning, and Hopkins. The England that nourished these writers will be viewed through their ballads, lyrics, sonnets, epigrams, and epics. "Not marble nor the gilded monuments of princes shall outlive this powerful rhyme."

EN 1251. INTRODUCTION TO LITERATURE.

Cat. I

This course introduces the student to a variety of critical perspectives necessary to an understanding and appreciation of the major forms, or genres, of literary expression (e.g., novel, short story, poetry, drama, and essay). Writing and class discussion will be integral parts of this course.

EN 1257. INTRODUCTION TO AFRICAN AMERICAN LITERATURE AND CULTURE.

Cat. II

This course examines the formation and history of the African American literary tradition from slave narratives to contemporary forms in black popular culture. The course will explore some genres of African American writing and their relation to American literature and to black cultural expression.

This course will be offered in 2014-15 and in alternating years thereafter.

EN 2221. AMERICAN DRAMA.

Cat. I

An investigation into the development of American drama from its beginnings to the present. The history of the emergence of the legitimate theatre in this country will be followed by reading important plays, including the works of O'Neill, Williams, Mamet, Norman, Henley, and others. Discussion of the growth of regional theatres and their importance to the continuation of theatre as a serious and non-profit art form will be included in the course. The student will investigate the importance of theatre practice in the evolution of the dramatic literature of the country.

EN 2222. THEATRE WORKSHOP.

Cat. I

A workshop course which offers the student the opportunity to explore theatre through creative involvement with playwriting, design, performance, production, and criticism. Students will work in a laboratory situation functioning as a micro-professional theatre which could develop a production that would be staffed and dramaturged from the group.

EN 2224. SHAKESPEARE: NOTHING BUT LOVE.

Cat. II

The course focuses on conflicts between personal desire and societal responsibility in such plays as *As You Like It*, *Antony and Cleopatra*, and *The Winter's Tale*. Through written work and in-class performances, students will examine how Shakespeare both maintains and subverts traditional ideas about marriage and sexual practice. These analyses will take into account contemporary views on gender roles and identity including the early modern cultural "ideal" of the "chaste, silent, and obedient" woman. Students will study Shakespeare's work as literature and also through performance and film adaptations. The WPI library of video recordings will be available for such work.

This course will be offered in 2014-15 and in alternate years thereafter.

EN 2225. THE LITERATURE OF SIN.

Cat. II

This course begins with selections from John Milton's provocative version of Adam and Eve's original sin in *Paradise Lost*. Focusing on Milton, John Donne and others, we will examine the theme of sin—political, religious, and sexual—in early modern literature. The events of the English Reformation profoundly influenced these writers, and their personal struggles against societal institutions have greatly influenced subsequent literary expressions of rage and rebellion. Students will also be reading texts by contemporary writers such as David Mamet which address the theme of sin in the modern city.

This course will be offered in 2013-14 and in alternate years thereafter.

EN 2231. AMERICAN LITERATURE: THE RAVEN, THE WHALE, AND THE WOODCHUCK.

Cat. I

Emerson challenged the young nation in "The American Scholar" (1837): If our writers were "free and brave," with words "loaded with life," they would usher in a "new age." The incredibly rich literature that soon followed created an "American Renaissance." This was the Age of Reform (1836-65) in more than literature. Writers were caught up in such burning issues as abolitionism, Union vs. secession, and women's rights. Authors studied may include Emerson, Thoreau, Poe, Fuller, Douglass, Melville, Whitman, and Dickinson.

EN 2232. AMERICAN LITERATURE: TWAIN TO WORLD WAR I.

Cat. I

This survey course covers developments in American literature, particularly the movement towards Realism, during the period of turbulent change between the end of the Civil War and the early years of the twentieth century. Topics will include the rebellion against post bellum sentimentalism, the rise of regional writing, the emerging literature of social protest, and literary responses to advances in science, industry, and urban life. Attention will be given to the works of Mark Twain, a prime exponent of turn-of-the-century literary trends, as well as to other pioneer realists (Wharton and Crane).

EN 2233. AMERICAN LITERATURE: MODERNISM TO THE PRESENT.

Cat. I

This final survey course in American literature covers the modern and contemporary periods, from 1914 to the present, focusing on the literary response to the cultural, intellectual, and social, changes that mark the past century of ferment both within the United States and beyond. The course will include work by dramatists, essayists, novelists, and poets such as, William Carlos Williams, William Faulkner, T. S. Eliot, Ralph Ellison, and Eugene O'Neill.

EN 2234. MODERN AMERICAN NOVEL.*Cat. II*

Selected works of fiction which appeared after World War I will be the focus of this course. Ernest Hemingway, William Faulkner, or other authors of the early modern period will be studied, but significant attention will also be given to contemporary novelists, such as Thomas Pynchon, Philip K. Dick, and Toni Morrison. The cultural context and philosophical assumptions of the novels will be studied as well as their form and technique.

This course will be offered in 2013-14 and in alternating years thereafter.

EN 2235. THE AMERICAN DREAM: MYTH IN LITERATURE AND THE POPULAR IMAGINATION.*Cat. I*

American writers from our beginnings have been preoccupied with "The American Dream" as a benchmark for measuring the attainment of our highest ideals as a people. The course examines the political, economic, religious, and rhetorical roots of the concept, assesses its popular and commercial manifestations, and explores the ironies, paradoxes, and continuities that have shaped this national self-image for almost 400 years. Readings include works by Puritan and Revolutionary writers, Native American leaders, Horatio Alger, Jr., William Dean Howells, F. Scott Fitzgerald, Martin Luther King, Jr., Adrienne Rich, Studs Terkel, and Archibald MacLeish.

EN 2237. LITERATURE AND THE ENVIRONMENT.*Cat. II*

This course will examine the many ways in which dramatists, essayists, filmmakers, novelists, and poets have articulated ecological and environmental concerns. Topics to be discussed may include changing attitudes towards terms like 'nature' and 'wilderness', the effects of technology on the environment, issues of conservation and sustainability, the dynamics of population growth, the treatment of animals, the production of food, and the presence of the spiritual in nature. Materials will include works by writers such as Wendell Berry, Rachel Carson, Winona LaDuke, Wangari Maathai, Thomas Malthus, Arne Naess, Nicolas Roeg, and Gary Snyder.

This course will be offered in 2014-15 and in alternating years thereafter.

EN 2238. AMERICAN REALISM.*Cat. I*

By examining authors who reacted against the so-called "genteel tradition," this course attempts to show how various subjects (death, sex, war, slum life and racial prejudice) were treated more honestly in short stories and novels after the Civil War. Authors may include Mark Twain, Stephen Crane, W. D. Howells, Edith Wharton, Kate Chopin, Theodore Dreiser, and twentieth century realists.

(Formerly EN 3236. Students who have received credit for this course may not receive credit for EN 2238.)

EN 2241. ENGLISH LITERATURE AFTER SHAKESPEARE.*Cat. II*

Participants in this course will examine outstanding works of eighteenth- and nineteenth-century English literature as these works raise the question: Who is man, and what is his relationship to God, nature, and to his fellow creatures? Writers covered may include Swift, Pope, Keats, Browning, and Dickens.

This course will be offered in 2014-15 and in alternating years thereafter.

EN 2242. POPULAR FICTION: READING IN INSTALLMENTS.*Cat. I*

Students in this course will have the opportunity to read two major masterpieces of English fiction the way they should be read: slowly, carefully, and with relish. Victorian novels are long and the term is short, but by reading novels in the way in which they were read by their original readers—serially—we can experience masterworks by Charles Dickens and George Eliot at comparative leisure, examining one serial installment per class session.

EN 2243. MODERN BRITISH LITERATURE.*Cat. II*

A survey of major modern British authors. The works of many of these writers reflect the political, religious, and social issues of the twentieth century. New psychological insights run parallel with experiments in the use of myth, stream of consciousness, and symbolism. Authors studied may include Hardy, Conrad, Owen, Joyce, Lawrence, Woolf, Eliot, Yeats, and Orwell.

This course will be offered in 2013-14 and in alternating years thereafter.

EN 2251. MORAL ISSUES IN THE MODERN NOVEL.*Cat. I*

This course focuses on the problem of how to live in the modern world. Emphasis will be placed on the way moral issues evolve within the complications of individual lives, as depicted in fiction. Such authors as Conrad, Kesey, Camus and Ellison show characters struggling with the questions of moral responsibility raised by love, religion, death, money, conformity.

EN 2252. SCIENCE AND SCIENTISTS IN MODERN LITERATURE.*Cat. I*

This course surveys the ways in which modern literature has represented science and scientists. Beginning with Mary Shelley's *Frankenstein*, the origin of what Isaac Asimov calls the "damned Frankenstein complex" is examined. More complex presentations of science and scientists occur in twentieth-century works like Brecht's *Galileo*, Huxley's *Brave New World*, and Pirsig's *Zen and the Art of Motorcycle Maintenance*.

The course covers major modern works of fiction and drama, including such literary forms as the play, the novel of ideas, and the utopian novel. Attention is focused on the themes (ideas) in, and the structure of, these works.

EN 3217. CREATIVE WRITING.*Cat. I*

The purpose of this course is to help students develop or improve the skills of written expression. Small groups are formed in which participants present and discuss their original work in either fiction or poetry.

EN 3222. FORMS IN WORLD DRAMA.*Cat. II*

The study of the major forms of world drama beginning with the Greeks and ending with contemporary works for the stage. Study will focus upon building skills to effectively analyze form and structure through dramatic content, and to create approaches to staging the plays from an informed understanding of the elements of theatrical style. The course will include plays by preeminent playwrights from cultures around the world.

Texts to be studied will vary at each offering.

This course will be offered in 2013-14 and in alternating years thereafter.

EN 3223. FORMS IN MODERN DRAMA.*Cat. II*

The study of the forms in modern drama through application of methods of theatre analysis for dramaturgical consideration and staging. Contemporary playwrights studied will include those from around the world whose work has been seen on international stages since the 1950s. Attention to theatre movements that reflect contemporary issues will be included, and producing groups that have operated with textual revision, minimal text, or no texts will be considered.

Texts to be studied will vary at each offering.

This course will be offered in 2014-15 and in alternating years thereafter.

EN 3224. SHAKESPEARE SEMINAR.*Cat. II*

This course would allow for the study of various Shakespearean topics in different years. Some representative subjects could include: "Shakespeare and the Arts," "Shakespeare's Contemporaries," "Shakespeare and Science," "Shakespearean Tragedy," "Shakespeare's Roman Plays," "Shakespeare's Histories," "Shakespeare on Film." The topics will be announced before the seminar meets.

This course will be offered in 2013-14 and in alternating years thereafter.

EN 3231. NEW ENGLAND SUPERNATURALISM.*Cat. II*

From the colonial period to the 20th century, New England writers have endowed the region's people and its settings (fields, forests, buildings, factories, cities) with shapes of fear. This course will explore New England's fascination with the supernatural from Puritan writings to the contemporary tale of terror. A primary focus of the course will be the genre of New England Gothicism and its literary conventions. Authors studied may include Hawthorne, Longfellow, Whittier, Freeman, Wharton, Jackson, Lovecraft, and King.

This course will be offered in 2013-14 and in alternating years thereafter.

EN 3232. THE CONCORD WRITERS.*Cat. II*

Rural, mid-19th-century Concord, Massachusetts, witnessed an unprecedented flowering of important and influential American literature. Why Concord? We sample writings of Ralph Waldo Emerson, Henry D. Thoreau, Nathaniel Hawthorne, Bronson Alcott, and Louisa May Alcott to explore matters of cultural background, biography, contemporary events, uses of the past, literary

vocation, and sense of place. Emphasis is on these writers' friendships and their creative responses to intellectual and social forces of the day—factors that made Concord a community of highly individualistic writers.

Students who have received credit for EN 2236 (New England Writers: Concord) may not receive credit for EN 3232.

This course will be offered in 2013-14 and in alternating years thereafter

EN 3233. WORCESTER BETWEEN THE COVERS: LOCAL WRITERS AND THEIR WORKS.

Cat. II

Worcester has had a rich and varied literary history from Isaiah Thomas's founding of the American Antiquarian Society in the early 1800s to the works of S. N. Behrman, Robert Benchley, Elizabeth Bishop, Esther Forbes, Stanley Kunitz, and Charles Olson in the 20th century. This course will examine selections from Worcester area writers in a number of genres (e.g., fiction, drama, poetry, essay, nonfiction memoir). Attention will be given to the local contexts of these writings as well as to each writer's contributions to the larger continuum of American Literature.

Students who have received credit for EN 2236 (New England Writers: Worcester) may not receive credit for EN 3233.

This course will be offered in 2014-15 and in alternating years thereafter.

EN 3234. MODERN AMERICAN POETRY.

Cat. II

This course examines the poetics and poetics of various modern and contemporary American traditions, focusing on schools and styles from the Modernists and Objectivists through the Black Arts Movement, Confessional Poetry, the New York School, and the San Francisco Renaissance. Attention will also be given to recent innovations in digital poetry, multiethnic poetry, and performance poetry. The course will include poets such as Wallace Stevens, Gwendolyn Brooks, Elizabeth Bishop, A.R. Ammons, Joy Harjo, Jimmy Santiago Baca, Myung Mi Kim, and Saul Williams.

This course will be offered in 2014-15 and in alternating years thereafter.

EN 3237. PURSUING MOBY-DICK.

Cat. II

Since 1851, readers of Herman Melville's masterpiece have joined in the chase for the "meaning" of the White Whale. After briefly examining the philosophical context of Emersonian idealism and the literary example of Hawthorne, the course is devoted solely to a close reading of *Moby-Dick*—one of the most innovative and mysterious novels in the English language. "Whose" book is it, anyway? Captain Ahab's? Ishmael's? The Whale's? The reader's? We conclude by surveying major critical approaches to the novel.

This course will be offered in 2014-15 and in alternating years thereafter.

EN 3248. THE ENGLISH NOVEL.

Cat. I

Participants in this seminar will examine the English novel from its origins in the eighteenth century to its twentieth-century forms, exploring the rich variety of ways a writer may communicate a personal and social vision. The novels treat love, travel, humor, work, adventure, madness, and self-discovery; the novelists may include Fielding, Austen, Dickens, Eliot, Wodehouse, and Woolf.

EN ----. DRAMA/THEATRE PERFORMANCES.

TH: IS/P

One-sixth unit of credit will be awarded at the conclusion of two successive terms of participation. Performance activities currently receiving credit are:

- TH 1225 Theatre Production Practicum
- TH 2225 Acting
- TH 2227 Advanced Acting
- TH 2229 Advanced Theatre Production Practicum
- TH 3225 Directing
- TH 3227 Advanced Directing
- TH 3229 Dramaturgy
- TH 4225 Theatre Technology Design
- TH 4227 Advanced Theatre Technology Design
- TH 4229 Advanced Dramaturgy

Credit would be given on the condition that the performance takes place in a WPI performance directed or advised by a part- or full-time WPI instructor.

Note: A maximum of two one-sixth units, or a total of one-third unit, may be applied toward the five courses, or five one-third units, taken prior to the final Humanities and Arts practicum.

ISE 1811. WRITING FOR NON-NATIVE SPEAKERS OF ENGLISH.

Cat. I

This course offers, through conferences, tutorial sessions and extensive writing practice, a review of English composition principles for international students.

The following topics are included: the motivation of the writer; basic grammar; organization of the paragraph, sentence, and overall essay or report; vocabulary and word choice; spelling hints; and style. Much emphasis is given to the development of effective revising techniques.

For the purposes of demonstrating "depth" and "breadth," this course may be considered an English (EN) or Writing (WR) course.

ISE 1812. SPEECH FOR NON-NATIVE SPEAKERS OF ENGLISH.

Cat. I

This course focuses on developing international students' ability to speak effectively, organize ideas logically, improve voice and diction, and use visual aids. Television and audiotapes are used to record competence and poise.

For the purposes of demonstrating "depth" and "breadth," this course may be considered an English (EN) or Writing (WR) course.

GERMAN (GN)

GN 1511. ELEMENTARY GERMAN I.

Cat. I

An intensive language course designed to teach concise expression of ideas in writing and speaking. Basic grammar and significant cultural aspects are introduced through the aid of readings, audio-recordings, video, and oral group interaction. (Formerly GN 2616.)

GN 1512. ELEMENTARY GERMAN II.

Cat. I

A continuation of Elementary German I.

Recommended background: GN 1511.

GN 2511. INTERMEDIATE GERMAN I.

Cat. I

A continuation of Elementary German II, with increased emphasis on oral and written expression. Basic textbook is supplemented by a collection of simple literary texts by the Grimm brothers, Brecht, and Bichsel.

Recommended background: Elementary German II.

GN 2512. INTERMEDIATE GERMAN II.

Cat. I

A continuation of Intermediate German I.

Recommended background: GN 2511.

GN 3511. ADVANCED GERMAN I.

Cat. I

Reading and in-class discussion of a wide variety of contemporary nonfictional and fictional texts. Some video viewing. Weekly brief writing assignments and continued expansion of vocabulary. Weekly vocabulary quiz. Review of grammar and introduction to advanced stylistic problems.

Recommended background: Intermediate German II.

GN 3512. ADVANCED GERMAN II.

Cat. I

A continuation of Advanced German I.

Recommended background: GN 3511.

This course satisfies the Inquiry Practicum requirement.

GN 3513. SURVEY OF GERMAN CIVILIZATION AND CULTURE FROM 1871 TO THE PRESENT.

Cat. II

Conducted entirely in German, the course presents an overview of the development of modern Germany and its culture since the founding of the Second Empire. Background readings in German and English provide the basis for in-class discussion of selected authentic German texts of various kinds: literary works, official documents, political manifestos, letters, and diaries. At least one film will be shown. A number of recurring themes in German culture will inform the content of the course: authoritarianism versus liberalism, idealism versus practicality, private versus public life.

Recommended background: GN 3511 (Advanced German I) and GN 3512 (Advanced German II) or equivalent.

This course satisfies the Inquiry Practicum requirement.

This course will be offered in 2014-15 and in alternating years thereafter.

GN 3514. SEMINAR ON SELECTED TOPICS IN GERMAN LITERATURE.*Cat. II*

The content of the seminar will change from time to time. The course will focus either on an author (e.g., Goethe, Heine, Kafka, Gunter Grass, Christa Wolf), a genre (e.g., lyric poetry, drama, narrative prose), a literary movement (e.g., Romanticism, expressionism), or a particular literary problem (e.g., literature and technology, writing and the Holocaust, writing and the city). The seminar will be conducted entirely in German.

Recommended background: GN 3511 (Advanced German I) and GN 3512 (Advanced German II) or equivalent.

This course satisfies the Inquiry Practicum requirement.

The course will be offered in 2013-14 and in alternating years thereafter.

GN 3516. GERMAN FILM.*Cat. II*

Since its beginnings in the early 20th century, film has been a powerful medium for popular entertainment as well as a potent expression of society's dreams, fears, and values. Films made in the German-speaking countries are no exceptions, from early expressionist films like *The Cabinet of Dr. Caligari* through Nazi documentaries like *Triumph of the Will* to today's feature films such as *Grizzly Man* and *Run Lola Run!* Many German directors have achieved international renown. This course, conducted in German, will examine representative German-language films from various perspectives: historical, socio-political, and thematic. Films will be shown in German with English subtitles. The course will include weekly screenings, discussion sessions, and substantial written assignments.

Recommended background: GN3512 or higher.

This course satisfies the Inquiry Practicum requirement.

This course will be offered in 2014-15 and in alternating years thereafter.

HISTORY (HI)

HI 1311. INTRODUCTION TO AMERICAN URBAN HISTORY.*Cat. I*

An introduction to the history of the American city as an important phenomenon in itself and as a reflection of national history. The course will take an interdisciplinary approach to study the political, economic, social, and technological patterns that have shaped the growth of urbanization. In addition to reading historical approaches to the study of American urban history, students may also examine appropriate works by sociologists, economists, political scientists and city planners who provide historical perspective.

HI 1312. INTRODUCTION TO AMERICAN SOCIAL HISTORY.*Cat. I*

An introduction to the historical study of American society. It addresses two questions: What is social history? and how do social historians work?

HI 1313. INTRODUCTION TO THE STUDY OF FOREIGN POLICY AND DIPLOMATIC HISTORY.*Cat. I*

An introduction to the various components of U.S. foreign policy decision-making and the basic techniques of diplomatic history. The course will focus on one or two topics in the history of American foreign relations, using a variety of primary documents and secondary sources.

HI 1314. INTRODUCTION TO EARLY AMERICAN HISTORY.*Cat. I*

An introduction to historical analysis through selected periods or themes in the history of America before the Civil War. A variety of readings will reflect the various ways that historians have attempted to understand the development of America.

HI 1321. INTRODUCTION TO EUROPEAN SOCIAL HISTORY.*Cat. I*

An introduction to the study of modern European social history since the Industrial Revolution. Topics will include industrialization in Britain and Europe, class formation, gender and the condition of women, technology and economy, culture and society. Students will learn to work with historical sources, to formulate arguments, to read critically, and to write clearly.

No prior knowledge of European history is required.

HI 1322. INTRODUCTION TO EUROPEAN CULTURAL HISTORY.*Cat. I*

In this course students think through some of the major intellectual currents that have defined modern Western Civilization. Topics include the philosophical impact of science on modern thought, the development of liberalism and

socialism, the crisis of culture in the twentieth century. Students read selections from major thinkers in the Western tradition and develop their skills at critical thinking, analysis, oral and written argument.

No prior knowledge of European history is required.

Some sections of this course may be offered as Writing Intensive (WI).

HI 1331. INTRODUCTION TO THE HISTORY OF SCIENCE.*Cat. I*

An introduction to the methods and source materials historians use to study the past, through the concentrated examination of selected case studies in the history of science. Possible topics include: contexts of scientific discovery, translation and transmission of scientific knowledge, revolutions in scientific belief and practice, non-Western science, social consequences of science.

HI 1332. INTRODUCTION TO THE HISTORY OF TECHNOLOGY.*Cat. I*

An introduction to concepts of historical analysis — i.e., the nature and methodology of scholarly inquiry about the past — through the concentrated examination of selected case studies in the history of technology. Possible topics include: the influence of slavery on the development of technology in the ancient world and the middle ages; the power revolution of the middle ages; the causes of the Industrial Revolution in 18th-century Britain; and the emergence of science-based technology in 19th-century America.

HI 1341. INTRODUCTION TO GLOBAL HISTORY.*Cat. I*

An introduction to the study of global history since 1500. Topics include global expansion, the Columbian exchange, and the slave trade; Renaissance, Reformation, and revolution in Europe; global industrialization, imperialism, and nation building; the world wars and revolutionary movements; decolonization and the Cold War. The course will also discuss case studies of developing nations of interest to students. Especially appropriate as background for students interested in International Studies or any of WPI's global Project Centers.

HI 2311. AMERICAN COLONIAL HISTORY.*Cat. I*

This course surveys early American history up to the ratification of the Constitution. It considers the tragic interactions among Europeans, Indians, and Africans on the North American continent, the growth and development of English colonies, and the revolt against the Empire that culminated in the creation of the United States of America.

HI 2313. AMERICAN HISTORY, 1789-1877.*Cat. I*

This course surveys American history from the Presidency of George Washington to the Civil War and its aftermath. Topics include the rise of American democracy, the emergence of middle-class culture, and the forces that pulled apart the Union and struggled to put it back together.

HI 2314. AMERICAN HISTORY, 1877-1920.*Cat. I*

This course surveys the transformation of the United States into an urban and industrial nation. Topics will include changes in the organization of business and labor, immigration and the development of cities, the peripheral role of the South and West in the industrial economy, politics and government in the age of "laissez-faire," and the diverse sources and nature of late 19th- and early 20th-century reform movements.

HI 2315. THE SHAPING OF POST-1920 AMERICA.*Cat. II*

This course surveys the major political, social, and economic changes of American history from 1920 to the present. Emphasis will be placed on the Great Depression, the New Deal, suburbanization, McCarthyism, the persistence of poverty, the domestic effects of the Vietnam war, and recent demographic trends.

This course will be offered in 2014-15 and in alternating years thereafter.

HI 2316. AMERICAN FOREIGN POLICY FROM WOODROW WILSON TO THE PRESENT.*Cat. II*

This survey of American diplomatic history begins with the legacy of Woodrow Wilson, continues through our apparent isolation in the 1920's, American neutrality in the 1930's, World War II, the early and later Cold War periods, and concludes with an overview of the current global involvement of the United States.

This course will be offered in 2014-15 and in alternating years thereafter.

Some sections of this course may be offered as Writing Intensive (WI).

HI 2317. LAW AND SOCIETY IN AMERICA.*Cat. I*

This survey course explores the dramatic expansion of government's role in American life between the Civil War and World War I. It does so by examining the response of constitutional, common, and statutory law to the social, economic, and political change associated with this pivotal period in the nation's history.

HI 2321. EUROPE FROM THE OLD REGIME TO WORLD WAR I.*Cat. I*

A survey of the major socio-economic, political, and cultural developments in European history from the Old Regime to World War I. The course will focus upon those factors and events that led to the formation of modern European society: Nation-State building, The French Revolution, industrialization; liberalism, democracy, and socialism; national unification of Italy and Germany; the coming of World War I.

No prior knowledge of European history is required.

HI 2322. EUROPE SINCE WORLD WAR I.*Cat. I*

A survey of the major political, socio-economic, and cultural developments in European history since World War I. The course will focus upon those factors and events that have led to the current world situation: the World Wars, fascism and communism, the Holocaust, the Cold War, the welfare state, decolonization, post-industrial society, popular culture, the collapse of communism, contemporary Europe.

No prior knowledge of European history is required.

HI 2324. INDUSTRY AND EMPIRE IN BRITISH HISTORY.*Cat. I*

A survey of modern Britain from the 18th century to the present. Topics include the British state and national identity, the industrial revolution, political and social reform, the status of women, sport and society, Ireland, the British Empire, the World Wars, the welfare state, economic decline. Especially appropriate as background for students planning IQP's or Humanities and Arts Projects in London.

No prior knowledge of British history is required.

HI 2325. MODERN FRANCE.*Cat. II*

This course examines the historical origins of modern France and the distinguishing features of French society and culture. Some of the topics covered include: Bourbon absolutism; the cause and effects of the French Revolution; the struggle for democratic liberalism in the 19th century; class and ideological conflict in the Third Republic; Vichy fascism, and present-day politics in the Fifth Republic.

No prior knowledge of French history is required.

This course will be offered in 2014-15 and in alternating years thereafter.

HI 2328. HISTORY OF REVOLUTIONS IN THE TWENTIETH CENTURY.*Cat. II*

A survey of some of the most important revolutionary movements of the twentieth century. We may consider topics such as racial, nationalist, feminist and non-violent revolutionary ideologies, communist revolution, the "green" revolution and cultural revolution. No prior knowledge of the history of revolutions is expected.

This course will be offered in 2013-14 and in alternate years thereafter.

HI 2331. SCIENCE, TECHNOLOGY, AND CULTURE IN THE EARLY AMERICAN REPUBLIC.*Cat. II*

This course surveys American science and technology from the first European explorations until the founding of WPI (in 1865). Topics may include: Enlightenment scientific theory and practice in colonial North America; Romanticism and the landscape; the politics of knowledge gained through contact with Native Americans; engineering and internal improvements; geography and resources in a continental empire; the American Industrial Revolution; the rise of science as a profession; the emergence of scientific racism; technology and the Civil War.

This course will be offered in 2014-15 and in alternating years thereafter.

HI 2332. HISTORY OF MODERN AMERICAN SCIENCE AND TECHNOLOGY.*Cat. I*

This course surveys American science and technology from 1859 to the present. Topics may include: Darwinism and Social Darwinism; scientific education; positivism and the growth of the physical sciences; the new biology and medicine; conservation, the gospel of efficiency and progressivism; science, World War I and the 1920s; the intellectual migration and its influence; science technology and World War II; Big Science, the Cold War and responses to Big Science; and cultural responses to science and controversies about science.

HI 2341. CONTEMPORARY WORLD ISSUES IN HISTORICAL PERSPECTIVE.*Cat. II*

This course examines the historical origins of contemporary global crises and political transformations. Students keep abreast of ongoing current events through periodical literature and explore the underlying long-term causes of these events as analyzed by scholarly historical texts. Topics will vary each time the course is taught but may include such topics as the following: The Israeli-Palestinian Conflict, Democratization in Africa, the Developing World and Globalization. No prior knowledge of world history is required.

This course will be offered in 2013-14 and in alternating years thereafter.

HI 2343. EAST ASIA: CHINA AT THE CENTER.*Cat. II*

This course will explore two thousand years of Asian participation in an international system, in Asia and with the rest of the world. Whether ruled by Chinese, Turks, Mongols or Manchus, China has been the political and cultural center of East Asia. Understanding the role of this superpower is critical to Asian and world history. The course will focus on themes such as the cosmopolitan experience, the early development and application of 'modern' ideas such as bureaucracy, market economy, and paper currency, and the centrality of religious ideology as a tool in statecraft. No prior knowledge of Asian history is required.

This course will be offered in 2014-15, and in alternate years thereafter.

HI 2352. HISTORY OF THE EXACT SCIENCES.*Cat. II*

This course surveys major developments in the global history of mathematics, astronomy, and cosmology, as manifestations of the human endeavor to understand our place in the universe. Topics may include: Ancient Greek, Ptolemaic, and Arabic knowledge systems; the Copernican Revolution; mathematical thinking and the Cartesian method; globalization of European power through the navigational sciences, applied mathematics, and Enlightenment geodesy; social consequences of probability and determinism in science; theoretical debates over the origins of the solar system and of the universe.

This course will be offered in 2013-14 and in alternating years thereafter.

HI 2353. HISTORY OF THE LIFE SCIENCES.*Cat. I*

This course surveys major developments in the global history of biology, ecology, and medicine, as manifestations of the human endeavor to understand living organisms. Topics may include: Aristotelian biology, Galenic, Chinese, and Arabic medical traditions; Vesalius and the Renaissance; Linnaeus and Enlightenment natural history; Romantic biology and the Darwinian revolution; genetics from Mendel to the fruit fly; eugenics and racial theories as "applied" biology; modern medicine, disease, and public health; microbiology from the double helix to the Genome project; and the relationship of the science of ecology to evolving schools of environmental thought.

HI 2354. HISTORY OF THE PHYSICAL SCIENCES.*Cat. II*

This course surveys major developments in the global history of geology, physics, and chemistry, as manifestations of the human endeavor to understand time, space, and the rules that govern inorganic nature. Topics may include: ancient atomism; alchemy and magic; the mechanical philosophy of Galilean and Newtonian physics; Hutton and the earth as eternal machine; energy, forces, matter, and structure in 19th century physics and chemistry; radioactivity, relativity, and quantum theory; the plate tectonics revolution.

This course will be offered in 2014-15 and in alternating years thereafter.

HI 2401. U.S. ENVIRONMENTAL HISTORY.*Cat. II*

This course surveys the environmental history of North America from the time of Columbus until the present, exploring how the environment has shaped human culture, and how human activity and human ideas have shaped nature. We will examine changes during three periods: a "contact" period focusing on

the ecological, economic and cultural ramifications of Old World-New World interconnection; a “development” period focusing on the rise of a market-based, urban-industrial society during the nineteenth century; and a final period characterized by the growth of reform movements to protect nature and the increasing global movement of goods and ideas in the twentieth century. In each period, we will trace changes in production, labor, and consumption patterns; transportation and other technologies; science, knowledge, and planning; disease, health and medicine; and cultural understandings, political debates, and place-making strategies.

This course will be offered in 2013-14 and in alternating years thereafter.

HI 2402. HISTORY OF EVOLUTIONARY THOUGHT.

Cat. II

This course will trace the history of evolutionary thought, including the growth of the geological sciences and expanding concepts of geological time, increased global travel suggesting new perspectives on biogeography, discoveries of fossils of now-extinct animals, and developments in comparative embryology and anatomy, culminating in the synthesis effected in 1859 by Charles Darwin, and in the Modern Synthesis of the 1940s. It will include emphases on the relationships of evolutionary and religious thought, and on depictions of evolutionary themes in the larger culture, including the arts, film, literature and popular culture, and will examine controversies, including current controversies, over evolution and the teaching of evolution in public schools in the United States.

This course will be offered in 2013-14 and in alternate years thereafter.

HI 3311. AMERICAN LABOR HISTORY.

Cat. I

This seminar course will deal with the history of organized labor in America as well as with the historic contributions of working people, whether unionized or not, to the growth and development of American ideas, politics, culture, and society.

Among the topics to be covered will be: the origins, growth, and expansion of trade and industrial unionism; the roots and development of working class consciousness; the underlying causes and eventual resolution of labor disturbances; the philosophical and ideological perspectives of the labor movement. Students will explore topics raised by common readings via written papers, seminar presentations, and work with primary source materials.

Suggested background: HI 2314, American History, 1877-1920; or HI 2315, The Shaping of Post-1920 America.

HI 3312. TOPICS IN AMERICAN SOCIAL HISTORY.

Cat. I

A seminar course on analysis of selected aspects of social organization in American history, with emphasis on the composition and changing societal character of various groups over time, and their relationship to larger social, economic, and political developments. Typical topics include: communities, families, minorities, and women.

Suggested background: Some college-level American history.

HI 3314. THE AMERICAN REVOLUTION.

Cat. I

This seminar course considers the social, political, and intellectual history of the years surrounding American independence, paying particular attention to the changes in society and ideas that shaped the revolt against Great Britain, the winning of independence, and the creation of new political structures that led to the Constitution.

HI 3316. TOPICS IN TWENTIETH-CENTURY U.S. HISTORY.

Cat. II

In this advanced seminar course, students will explore one aspect of twentieth-century U.S. history in more depth. Topics vary each year but may include political movements such as the New Deal or the Civil Rights Movement, an aspect of American foreign policy such as the Cold War, a short time period such as the 1960s, a cultural phenomenon such as consumption, or a geographical focus such as cities or New England. The course will require substantial reading and writing. Suggested background: HI 2314 (American History, 1877-1920), HI 2315 (The Shaping of Post-1920 America), or other American history courses.

This course will be offered in 2013-14 and in alternating years thereafter.

HI 3317. TOPICS IN ENVIRONMENTAL HISTORY.

Cat. II

In this seminar course, students will explore one aspect of U.S. or global environmental history in more depth. Topics vary each year but may include environmental thought, environmental reform movements, comparative environmental movements, natural disasters, the history of ecology, built

environments, environmental justice, New England environmental history, or the environmental history of South Asia or another region of the world. The course will require substantial reading and writing. Suggested background: HI 2401 U.S. Environmental History.

This course will be offered in 2014-15, and in alternating years thereafter.

HI 3321. TOPICS IN MODERN EUROPEAN HISTORY.

Cat. II

This seminar course examines topics in the cultural, socio-economic and political history of modern Europe, with a focus on Great Britain. Topics may vary each year among the following: nationalism, class and gender, political economy, environmental history, sport and society, film and history. Readings will include primary and secondary sources.

This course will be offered in 2013-14 and in alternating years thereafter.

HI 3323. TOPICS IN THE WESTERN INTELLECTUAL TRADITION.

Cat. II

This seminar course in the history of ideas focuses each year on a different theme within the intellectual-cultural traditions of Western Civilization. Some topics are the following: The Impact of the New Physics on 20th Century Philosophy; The Social History of Ideas; The Enlightenment and the French Revolution; Sexuality, Psycho-analysis, and Revolution. The course is structured around classroom discussion of major texts on the topic under study and a related research paper.

This course will be offered in 2013-14 and in alternating years thereafter.

HI 3331. TOPICS IN THE HISTORY OF EUROPEAN SCIENCE AND TECHNOLOGY.

Cat. II

A seminar course on the relationships among science, technology, and society in European culture, examined through a series of case studies. Topics from which the case studies might be drawn include: global scientific expeditions, mapmaking, and European imperialism; the harnessing of science for industrial purposes; the role of the physical sciences in war and international relations; the function of the science advisor in government; the political views and activities of major scientists such as Einstein. Students will use primary sources and recently published historical scholarship to analyze the case studies.

Suggested background: Courses in European history and the history of science and technology.

This course will be offered in 2014-15 and in alternating years thereafter.

HI 3334. TOPICS IN THE HISTORY OF AMERICAN SCIENCE AND TECHNOLOGY.

Cat. I

This seminar will examine a particular issue or theme in the history of American science and technology. Topics will vary from year to year, but may include: technology and the built environment; science, technology and the arts; communications of science and scientific issues with the larger public; technology and scientific illustration; science in popular culture; science and the law; or close examination of episodes in the history of American science and technology such as the American Industrial Revolution; science and technology in the years between the world wars; the Manhattan Project; science and the culture of the Cold War; or science, technology and war in American history. This course will require significant reading and writing.

Suggested background: Some familiarity with history of science or history of technology, and with United States history.

HI 3335. TOPICS IN THE HISTORY OF NON-WESTERN SCIENCE AND TECHNOLOGY.

Cat. II

A seminar course on the relationships among science, technology, and society from cultures outside Europe and North America, examined through a series of case studies. Topics from which the case studies might be drawn include: Chinese medicine and technology; Arabic mathematics, medicine, and astronomy; Indian science and technology (including, for example, metalworking and textile production); Mayan mathematics and astronomy; Polynesian navigation; various indigenous peoples' sustainable subsistence technologies (e.g. African agriculture, Native American land management, aboriginal Australian dreamtime).

Suggested background: Courses in global history and the history of science and technology.

This course will be offered in 2013-14 and in alternating years thereafter.

HI 3341. TOPICS IN IMPERIAL AND POSTCOLONIAL HISTORY.*Cat. II*

This seminar course examines topics in the history of European imperialism, colonialism, and the postcolonial aftermath. Topics vary each year among the following: culture and imperialism, the expansion of Europe, the economics of empire, travel and exploration narratives, imperialism in literature and anthropology, decolonization in Asia and Africa, postcolonial studies. Readings will include primary and secondary sources.

This course will be offered in 2014-15 and in alternating years thereafter.

HI 3342. TOPICS IN COMPARATIVE CIVILIZATIONS.*Cat. II*

This seminar course compares and contrasts major religious, philosophical, social, and political themes in different civilizations. Comparisons will vary each year but may be drawn from Asia, the Indian subcontinent, the Middle East, Africa, and indigenous cultures of the Americas. It examines the historical foundations of these civilizational differences and draws comparisons with common features of Western civilization. One important goal of the course is to enhance student appreciation of non-Western values and traditions.

This course will be offered in 2014-15 and in alternating years thereafter.

HI 3343. TOPICS IN ASIAN HISTORY.*Cat. I*

This seminar course examines topics in the cultural, socio-economic, religious and political history of East Asia. Topics vary each year and may include the following: nationalism and the writing of history, travel and exploration narratives, cross-cultural contact, the role of religion and ideology in political history, development and the environment in Asia, film and history, and the place of minorities and women in Asian societies. Suggested background: previous courses on Asia such as HU 1412, HI 2328, HI 2343, or RE 2724.

Some sections of this course may be offered as Writing Intensive (WI).

ISE 1813. AMERICAN HISTORY FOR INTERNATIONAL STUDENTS.*Cat. I*

An introduction to American history designed to provide international students with a basic understanding of the history and culture of the United States. Written and oral assignments will also help these students gain a more effective command of the English language.

For the purposes of demonstrating "depth" and "breadth," this course may be considered a history (HI) course.

HUMANITIES (HU)

The courses listed below are general humanities courses and are intended to provide conceptual introductions to the major disciplines within the humanities. Students will encounter the basic methods of critical analysis and discussion required for the future investigation of the specific area they choose for their humanities and arts requirement. These courses emphasize patterns of thought, methods of inquiry, appropriate vocabulary, and critical attitudes needed to appreciate most fully various areas in the humanities; they are not intended as surveys or historical overviews. Consequently, in each course the subject matter used to develop and illustrate key concepts and approaches will change regularly. Practice in analytic thinking and writing will be a significant part of each course. The skills generated by these courses will greatly aid students in developing their themes and will be essential for the completion of the Humanities and Arts Requirement.

HU 1401. INTRODUCTION TO HUMANITIES AND ARTS I.*Cat. I*

This course provides an introduction to the Humanities and Arts by examining, discussing, and communicating our ideas about a fundamental question in human experience: what is real and how are claims made for that reality?

Students will study this question from the points of view of literature, history, science, and art.

HU 1401 is open to all students with preference given to first-year students, especially those who would like to sample several different areas of the Humanities and Arts before deciding on an area of concentration. HU 1402 follows historically from HU 1401 and students are encouraged BUT NOT REQUIRED to take both courses.

HU 1402. INTRODUCTION TO HUMANITIES AND ARTS II.*Cat. I*

This course provides an introduction to the Humanities and Arts by examining, discussing, and communicating our ideas about a fundamental question in human experience: what is real and how are claims made for that reality?

Students will study this question from the points of view of literature, history, science, and art.

HU 1402 is open to all students with preference given to first-year students, especially those who would like to sample several different areas of the Humanities and Arts before deciding on an area of concentration. HU 1402 follows historically from HU 1401 and students are encouraged BUT NOT REQUIRED to take both courses.

HU 1411. INTRODUCTION TO AMERICAN STUDIES.*Cat. II*

This interdisciplinary course introduces students to a number of basic American Studies methodologies. Emphasis will vary according to the instructor, but usually the course will cover the following: the textual and contextual analysis (at the community, national, and transnational levels) of literary works; the relationships between the literary, performing, and visual arts in a specific time period; the analysis of radio, film, television, and digital media forms at the level of production and reception; the mediation and remediation of cultural, social, and political history.

This course will be offered in 2013-14 and in alternating years thereafter.

HU 1412. INTRODUCTION TO ASIA.*Cat. I*

This course will explore Asia through an interdisciplinary approach. We will examine tradition and modernity in some or all of four cultural regions—South Asia (India), East Asia (China), Southeast Asia (Vietnam or Thailand), Inner Asia (Tibet)—and globalization in Japan and/or Hong Kong. We will explore the cultural traditions of these various regions, paying special attention to history, religion, society. We will also consider modern developments in these same regions. The impact of colonialism, nationalism, revolution, industrialization and urbanization on the lives of Asian peoples will be illustrated through films and readings. No prior knowledge of Asian history or culture is expected.

HU 2340. POPULAR CULTURE AND SOCIAL CHANGE IN ASIA.*Cat. II*

Godzilla, kung-fu, anime, sushi, Hello Kitty, yin and yang, Pokémon, manga. All of these have become part of our American lives, but where did they come from and what meaning do they hold as cultural phenomena? In this class we will explore the popular cultures of East Asia to better understand the influences that have shaped the region's contemporary societies. Focus country will be either Japan or China, depending on term offered. Students will study various media of popular culture, such as films, songs, advertisements, video games, manga, anime, to explore the changing society of these countries. We will link the individual cultural phenomena studied to both internal and external influences, situating popular culture within transnational currents and exchanges when appropriate. No prior knowledge of Asian history is required for this class.

HU 2441. AFRICAN HISTORY AND CULTURE.*Cat. II*

This survey course uses an interdisciplinary approach to examine fundamental issues in African political, social, and cultural history. The course may include various topics, such as ancient African kingdoms, the influence of Islam, the Atlantic slave trade, imperialism and decolonization, contemporary democratization, or African literature and art.

Suggested background: HI 1341 Introduction to Global History.

This course will be offered in 2013-14 and in alternating years thereafter.

HU 3411. PRO-SEMINAR IN GLOBAL PERSPECTIVES.*Cat. II*

This course examines the fundamentals of intercultural communication to prepare students to live and work with people from other cultures. It explores how different patterns of thinking and behavior, assumptions and values, have arisen from different cultural traditions and divergent histories in the world. Racism, prejudice, and bigotry—often the result of cultural, social, and technological differences in human experience—are among the concerns of the class. This course cannot teach students how to behave and think in all parts of the world, but it raises questions about ethnocentric assumptions often taken for granted by those working or studying in another culture. It is excellent preparation for an international IQP or educational exchange.

Suggested background: Previous courses in Humanities.

This course will be offered in 2013-14 and in alternating years thereafter.

HU 3900. INQUIRY SEMINAR IN HUMANITIES AND ARTS.*Cat. I*

This seminar serves as the culmination for a student's Humanities and Arts Requirement. The seminar provides opportunities for sustained critical inquiry into a focused thematic area. The seminar seeks to help students learn to

communicate effectively, to think critically, and to appreciate diverse perspectives in a spirit of openness and cooperation through research, creativity, and investigation. The specific theme of each seminar will vary and will be defined by the instructor. Prior to enrolling in the seminar, a student must have completed five courses in Humanities and Arts, at least two of which must be thematically related and at least one of which must be at the 2000-level or above.

HU 3910. PRACTICUM IN HUMANITIES AND ARTS.

Cat. I

The practicum serves as the culmination for a student's Humanities and Arts Requirement. The practicum provides opportunities for sustained critical inquiry into a focused thematic area. The practicum seeks to help students learn to communicate effectively, to think critically, and to appreciate diverse perspectives in a spirit of openness and cooperation through research, creativity, and investigation. The specific theme of each practicum will vary and will be defined by the instructor. Prior to enrolling in the practicum, a student must have completed five courses in Humanities and Arts, at least two of which must be thematically related and at least one of which must be at the 2000-level or above. Consent of the instructor is required for enrollment.

HU 4411. SENIOR SEMINAR IN INTERNATIONAL STUDIES.

Cat. I

This course is designed to integrate each student's international courses, projects, and experiences in a capstone seminar in International Studies. Students will reflect on what they have learned in their previous courses and international experiences. They will assess what happened to them overseas, why it happened, and how it might be understood. They will also prepare a paper with an instructor in their area of international studies that integrates their previous academic courses. Students will also explore how they might translate their courses and experiences into future personal and professional opportunities.

Recommended background: previous courses in international studies, such as HI 1341 and HU 3411, and completion of an international IQP or an international educational exchange.

HU—AAS-50. AMERICAN ANTIQUARIAN SEMINAR.

ISP

Each fall the American Antiquarian Society and five Worcester colleges sponsor a research seminar at the Antiquarian Society library. The seminar is conducted by a scholar familiar with the Society's holdings in early American history, and the seminar topic is related to his or her field of research.

Selection is highly competitive. The ten participating students are chosen by a screening committee made up of representatives of the five participating colleges: Assumption College, Clark University, College of the Holy Cross, WPI, and Worcester State College.

The seminar topic and research methods combine several disciplines, and students from a wide variety of majors have participated successfully in this unique undergraduate opportunity.

MUSIC (MU)

MU 1511. INTRODUCTION TO MUSIC.

Cat. I

This course, designed for students who have little or no previous experience in music, will present an approach to the study of music that includes studying some concepts of music theory (rhythms, scales, keys, intervals, harmony). The course will also include a study of some of the great masterpieces through listening, reading, and discussion.

Recommended background: No previous experience is necessary.

MU 1611. FUNDAMENTALS OF MUSIC I.

Cat. I

This course concentrates on basic music theory of the common practice period. If time permits, instruction includes ear training, sight singing, and work on scales and intervals.

Recommended background: basic knowledge of reading music.

MU 2611. FUNDAMENTALS OF MUSIC II.

Cat. I

Fundamentals II is a course on music theory at the advanced level beginning with secondary dominants and modulations and working through 19th-century chromatic harmony.

MU 2719. JAZZ HISTORY.

Cat. II

Through an introduction to the musical contributions of Louis Armstrong, Duke Ellington, Charlie Parker, Miles Davis and others, students are exposed to the chronological development of the language of jazz. Each jazz era is examined in detail including the musical and social contexts which helped define it. Participants are expected to build aural skills with the goal of identifying specific historical periods through the recognition of particular musical characteristics. Students examine in depth one artist of their choice.

This course will be offered in 2014-15 and alternating years thereafter. [This replaces MU 4623. Credit is not allowed for both MU 4623 and MU 2719.]

MU 2720. MUSIC HISTORY I: MEDIEVAL THROUGH THE BAROQUE.

Cat. II

This course provides a historical survey of Western music from Medieval through Baroque periods with an emphasis on understanding stylistic traits and theoretical concepts of the eras. Topics include Gregorian chant and secular monophony; evolution of musical notation; development of polyphonic music; and vocal and instrumental genres such as mass, motet, madrigal, opera, cantata, sonata, and concerto, among others.

No prior background in music is necessary.

This course will be offered in 2014-15 and alternating years thereafter.

MU 2721. MUSIC HISTORY II: CLASSICAL TO THE PRESENT.

Cat. I

This course provides a historical survey of Western music from the Classical period to the present with an emphasis on understanding stylistic traits and theoretical concepts of the eras. Topics include the development of genres such as sonata, string quartet, concerto, symphony, symphonic poem, character piece, Lied, and opera; and 20th century trends of impressionism, primitivism, atonality, serialism, minimalism, aleatory music, and electronic music.

No prior background in music is necessary.

MU 2722. HISTORY OF AMERICAN POPULAR MUSIC.

Cat. I

This course will explore the uniqueness of America's popular music and its origins in the music of Africa and the folk music of Europe. Particular emphasis will be given to the origins and history of rock 'n' roll examining its roots in blues and early American popular music. [This replaces MU 4625. Credit is not allowed for both MU 4625 and MU 2722.]

MU 2723. MUSIC COMPOSITION.

Cat. I

This course will investigate the sonic organization of musical works and performances, focusing on fundamental questions of unity and variety. Using a progressive series of composition projects, the class will examine aesthetic issues that are considered in the pragmatic context of the instructions that composers provide to achieve a desired musical result. The class will examine the medium of presentation - whether these instructions are notated in prose, as graphic images, or in symbolic notation. Weekly listening, reading, and composition assignments draw on a broad range of musical styles and intellectual traditions, from various cultures and historical periods.

The class will meet for two weekly sessions of one hour and fifty minutes. Each student will be assigned a performance ensemble. Each performance ensemble will have a weekly two-hour lab. In addition, each student will keep a weekly log (online) of his or her experiences as a composer.

MU 2730. JAZZ THEORY.

Cat. I

This course examines harmonic and melodic relationships as applied to jazz and popular music composition. Students are introduced to a wide range of jazz improvisational performance practices. Topics include compositional forms, harmonic structures, major and minor keys, blues, modal jazz, and re-harmonization techniques. Students are expected to have a basic knowledge of reading music. [This replaces MU 4624. Credit is not allowed for both MU 4624 and MU 2730.]

MU 3001. WORLD MUSIC.

Cat. II

This course introduces students to selected musical cultures of the world, e.g., Africa, Asia, the Middle East, and Latin America, from the ethnomusicological perspective by examining their musical styles as well as cultural and social contexts. Students will be expected to read materials in interdisciplinary areas, including musical ethnographies.

No prior background in music is necessary.

This course will be offered in 2013-14 and alternating years thereafter.

MU 3002. ARRANGING AND ORCHESTRATION.*Cat. I*

Students will study specific characteristics of instruments and the voice to enable them to successfully arrange vocal and instrumental music. Students will need to possess a basic knowledge of music theory. Suggested background for this course is MU 1611 (Fundamentals of Music I) or its equivalent.

MU 3614. TOPICS IN MIDI.*Cat. I*

This course examines topics in Music Technology in which the application of MIDI and MIDI systems play a significant role. Topics may vary each year among the following areas: sequencing, live performance, composition, and film scoring. Students can take MU 3614 only one time for credit, but a student interested in taking another version can take a second one as an ISP.

Recommended background: MU 1611 (Fundamentals of Music)

MU 3615. TOPICS IN DIGITAL SOUND.*Cat. I*

This course examines topics in Music Technology in which Digital Sound plays a significant role. Topics may vary each year among the following areas: digital editing, audio recording, film scoring, game audio, sound effects, audio production, theatrical sound, and surround sound. Students can take MU 3615 only one time for credit, but a student interested in taking another version can take a second one as an ISP.

Recommended background: MU 1611 (Fundamentals of Music)

MU 3616. TOPICS IN INTERACTIVE PROGRAMMING.*Cat. I*

This course examines topics in Music Technology in which Interactive Programming plays a significant role. Topics may vary each year among the following areas: real time performance controllers, algorithmic composition, interface design, sensor technology, and gesture detection.

Students can take MU 3616 only one time for credit, but a student interested in taking another version can take a second one as an ISP.

Recommended background: MU 1611 (Fundamentals of Music)

MU 4621. INDEPENDENT INSTRUCTION (LESSONS) IN MUSIC.*ISP*

Students electing to complete their Humanities and Arts Requirement in music may, for one of their five courses, undertake 1/3 unit (normally at 1/12 unit per term) of private vocal or instrumental instruction. (Supplemental ensemble work is also strongly recommended.) The student must receive prior approval by a member of the WPI music faculty, and the instruction must be beyond the elementary level. Lessons involve a separate fee. Note that the maximum of 1/3 unit credit for lessons may be earned in addition to 1/3 unit credit for performance (see condition A or B below). Additional work, either in performance or lessons, may be acknowledged on the WPI transcript but will carry no WPI credit. Private lessons: voice, piano, organ, winds, brass, strings, and percussion.

MUSIC ENSEMBLES (MU)

Students who sing or play a traditional band or orchestra instrument at the intermediate level or better may enroll for any of the ensembles listed below. Students will register at the beginning of A term and receive 1/6 unit at the end of B term for participation in both terms. Students may also register at the beginning of C term and receive 1/6 unit at the end of D term for participation in both terms. Students may apply up to 1/3 unit of performing ensembles to the Humanities and Arts course requirement.

MU 2631. MEN'S GLEE CLUB.*Cat. I*

The Glee Club is the men's choral ensemble and the oldest student organization on campus. Glee Club performs many styles and periods of the vast repertoire of music for men's ensembles. Several times each year the Glee Club and Alden Voices (Women's Chorale) join forces as the WPI Festival Chorus to perform major works of the repertoire. The Glee Club tours Europe and also performs on tour. Rehearsals are held weekly. Prior singing or music experience is encouraged but not required. Open to all men.

MU 2632. ALDEN VOICES.*Cat. I*

Alden Voices is the women's choral ensemble. Alden Voices performs many styles and periods of the vast repertoire of music for women's ensembles. Several times each year Alden Voices and the Men's Glee Club join forces as the WPI Festival Chorus to perform major works of the repertoire. Alden Voices performs on tour as well as performing on campus. Rehearsals are held weekly. Prior singing or music experience is encouraged but not required. Open to all women.

MU 2633. BRASS ENSEMBLE.*Cat. I*

The Brass Ensemble performs frequently on campus and on tour and is open to students who perform on trumpet, trombone, euphonium, French horn, tuba, or tympani. Renaissance antiphonal music is included in the repertoire. Rehearsals are held weekly. Students are expected to perform with the ensemble and to know how to read music. Permission of the instructor is necessary to register.

MU 2634. JAZZ ENSEMBLE.*Cat. I*

The Jazz Ensemble performs frequently on campus and on tour and plays jazz arrangements written for a small ensemble with major emphasis on improvisation. Rehearsals are held weekly. Students are expected to perform with the ensemble and to know how to read music. Permission of the instructor is necessary to register.

MU 2635. STAGE BAND.*Cat. I*

The Stage Band performs traditional and contemporary big band literature with an emphasis on stylistically appropriate interpretation and performance practice. The ensemble performs frequently on campus and on tour. Rehearsals are held weekly. Students are expected to perform with the ensemble and to know how to read music. Permission of the instructor is necessary to register.

MU 2636. CONCERT BAND.*Cat. I*

The Concert Band is a large ensemble that performs several concerts a year as well as on tour. Membership is open to those who play traditional wind, brass or percussion instruments. Rehearsals are held weekly. Students are expected to perform with the ensemble and to know how to read music.

MU 2637. STRING ENSEMBLE.*Cat. I*

The String Ensemble performs music for string orchestra both on campus and on tour. Members of the string ensemble also comprise the string section for the full orchestra. Rehearsals are held weekly. Students are expected to perform with the ensemble and to know how to read music.

MU 2638. VOCAL PERFORMANCE LAB.*Cat. I*

The Vocal Performance Lab is a performance practice oriented chamber vocal ensemble. This ensemble explores specific stylistic techniques as pertains to the music of the Renaissance, Baroque, twentieth century, jazz, and extended vocal techniques (electronic, digital and experimental). The ensemble meets weekly. Students are expected to be of the highest vocal caliber and should possess advanced sight-reading techniques. Open to both men and women. Permission of the instructor is necessary to register.

PHILOSOPHY (PY)

PY/RE 1731. INTRODUCTION TO PHILOSOPHY AND RELIGION.*Cat. I*

This course provides an overview of key concepts, methods and authors in both fields. These introduce the student to the types of reasoning required for the pursuit of in-depth analysis in each discipline.

Emphasis on topics and authors varies with the particular instructor.

PY 2711. PHILOSOPHICAL THEORIES OF KNOWLEDGE AND REALITY.*Cat. I*

This course introduces students to methods of philosophical analysis relating to the classification and conceptualization of entities and the nature of knowledge. The course will focus on a related set of problems or on the elaboration of a philosophical issue of knowledge or reality in the history of philosophy. Among themes and problems considered might be: How has the being of nature and knowledge of nature been represented in Western philosophy and science? What kind of a phenomenon is mind or thought and can entities in addition to human beings, such as computers, be said to have this attribute? What are reliable methods of arriving at and evaluating scientific knowledge, and are these methods identical for the natural and human sciences? Readings might include excerpts from the works of Plato, Aristotle, Bacon, Descartes, Kant, James, Dewey and Heidegger, as well as numerous contemporary philosophers.

Suggested background: familiarity with basic philosophical concepts and terms (as in PY/RE 1731).

PY 2712. SOCIAL AND POLITICAL PHILOSOPHY.*Cat. II*

This course examines metaphysical and moral questions that philosophers have raised about social and political life. Among questions treated might be: What are the grounds, if any, of the obligation of a citizen to obey a sovereign? Are there basic principles of justice by which societies, institutions and practices are rightly evaluated? What is democracy, and how can we tell if an institution or practice is democratic? To what degree do economic institutions put limits on the realization of freedom, democracy and self-determination? Readings might include excerpts from the works of Plato, Hobbes, Locke, Rousseau and Marx, as well as numerous contemporary philosophers.

Suggested background: familiarity with basic concepts in philosophy (as in PY/RE 1731).

This course will be offered in 2013-14 and in alternative years thereafter.

PY 2713. BIOETHICS.*Cat. II*

The purpose of this course is to evaluate the social impact of technology in the areas of biology/biotechnology, biomedical engineering and chemistry. The focus of the course will be on the human values in these areas and how they are affected by new technological developments. The course will deal with problems such as human experimentation, behavior control, death, genetic engineering and counseling, abortion, and the allocation of scarce medical resources. These problems will be examined through lectures, discussions and papers.

Suggested background: knowledge of key terms and concepts as given in PY/RE 1731 and PY/RE 2731.

This course will be offered in 2013-14 and in alternating years thereafter.

PY 2714. ETHICS AND THE PROFESSIONS: PERSONAL, PROFESSIONAL, AND SOCIAL DILEMMAS.*Cat. II*

This course will present a framework by which various ethical dilemmas that arise in the professions, especially the science-related professions, can be identified, examined, and evaluated on the level of personal morality, professional codes of ethics, and social values. The goal is to study the solutions of these dilemmas in each of the three levels to determine what relation there may be between them, and whether or not resolutions of a dilemma on one level are appropriate for another level. Ethical concepts, professional codes of ethics, and policy positions will be used to analyze and evaluate these issues in a case study format. Representatives of appropriate professions will be invited to address specific issues pertaining to ethical dilemmas in their field.

This course will be offered in 2014-15 and in alternating years thereafter.

PY 2716. PHILOSOPHY OF DIFFERENCE.*Cat. II*

This course examines philosophical presuppositions and questions of value underlying and expressed in the construction of masculinity and femininity in modern society. The course may also examine social identities rooted in race, ethnicity, sexual preference, and ability/disability. Possible topics include: changing conceptions of love, sex, marriage, and parenting; how our conceptions of masculinity and femininity are influenced by and influence (for example) religion, science, politics, work, and art; and the relations between feminist theory and other critical social theories.

This course will be offered in 2014-15 and in alternating years thereafter.

PY 2717. PHILOSOPHY AND THE ENVIRONMENT.*Cat. I*

This course will focus on the following questions:

What is the scope of the current environmental crisis? What does this crisis reveal about the philosophical presuppositions and dominant values of our intellectual worldviews and social institutions? How can existing social theories help explain the environmental crisis? What implications does the crisis have for our sense of personal identity? What moral and spiritual resources can help us respond to it?

Readings will be taken from contemporary and historical philosophers and naturalists.

Suggested background: familiarity with basic concepts in philosophy (as in PY/RE 1731).

PY 2718. FREEDOM AND EXISTENCE.*Cat. II*

This course takes up the question of the relationship between self and other, the tension between freedom and responsibility, and the problem of ethical and political commitment in an alienating world. How is individuality possible in a mass society? To what extent are we responsible for others? What would a

philosophy of action look like? In examining such questions, the course will focus specifically on two important movements in 19th and 20th century philosophy, existentialism and phenomenology. Readings might include works by Kierkegaard, Nietzsche, Levinas, Camus, DeBeauvoir, Sartre, Fanon, and Merleau-Ponty, as well as contemporary readings by feminist and critical race theorists working within the phenomenological tradition. Students will also encounter some of the great works of existentialist fiction and cinema.

Suggested background: PY/RE 2731, Introduction to Philosophy and Religion.

This course will be offered in 2013-14 and in alternating years thereafter.

PY/RE 2731. INTRODUCTORY ETHICS.*Cat. I*

This course will review at an introductory level theories of ethics, individual figures in the history of ethics, and selected problems in ethics. The emphasis will be on philosophical or religious ethics depending on the instructor.

PY 3711. TOPICS IN PHILOSOPHY.*Cat. I*

The purpose of this course is to expose students to somewhat more advanced and specialized study in philosophy. Its focus will vary, but will typically be one of the following types: a particular philosopher (e.g., Plato, Kant, Mill); a particular philosophical tradition (e.g., Pragmatism, Ordinary Language philosophy, Empiricism); a particular philosophical problem (free will, knowledge of other minds, historical explanation); or a particular philosophical classic (Hegel's *Phenomenology of Mind*, Aristotle's *Ethics*).

Suggested background: three other philosophy courses.

PY 3712. PHILOSOPHY OF RELIGION.*Cat. II*

This course will focus on philosophical questions concerning the following topics: the existence and nature of God; the compatibility of God and evil; the nature of religious faith and the relationship between religion, science and ethics; interpretations of the nature of religious language; the philosophically interesting differences between Western and Eastern religions; philosophical critiques of the role of religion in social life. Authors may include: Hume, Kant, Kierkegaard, Buber, Tillich, Daly, Nietzsche and Buddha.

Suggested background: familiarity with basic religious concepts and terms (as in PY/RE 1731).

This course will be offered in 2014-15 and in alternating years thereafter.

PY/RE 3731. PROBLEMS IN ETHICS AND SOCIAL PHILOSOPHY.*Cat. I*

This course will examine in depth selected problems in ethical theory and social philosophy. The specific content or emphasis will be determined by the instructor.

Suggested background: knowledge of either PY/RE 2731 or PY 2712.

RELIGION (RE)

RE/PY 1731. INTRODUCTION TO PHILOSOPHY AND RELIGION.*Cat. I*

This course provides an overview of key concepts, methods and authors in both fields. These introduce the student to the types of reasoning required for the pursuit of in-depth analysis in each discipline.

Emphasis on topics and authors varies with the particular instructor.

RE 2721. RELIGION AND CULTURE.*Cat. I*

The purpose of this course is to examine how the two institutions of religion and culture interact and mutually influence one another. To do this a variety of definitions of religion and culture will be presented as well as an analysis of how religion interacts with such cultural phenomena as economics, politics, the state, war and the basic problem of social change. The purpose of this is to obtain a variety of perspectives on both religion and culture so that one can begin to articulate more clearly the different influences that occur in the development of one's own personal history and the culture in which one lives.

Suggested background: knowledge of key terms and concepts as given in PY/RE 1731.

RE 2722. QUESTIONS OF EVIL AND GOOD.*Cat. I*

Notions of good and evil shape many of our day to day religious and philosophical claims and arguments. This course concerns questions and approaches to what is often called "evil," through a study of classical and contemporary texts and problems. The focus of the course will vary, but will include metaphysical,

moral, and political ideas about kinds and relations of goods and evils from different religious and philosophical perspectives. This study takes into account notions of error, ignorance, wrong-doing, freedom and responsibility evident in contemporary religious and philosophical debate.

RE 2723. RELIGIONS OF THE WEST.*Cat. II*

The purpose of this course is to examine, from an historical, doctrinal, scriptural and philosophical perspective, major Western religions. The course will focus primarily on Judaism, Christianity and Islam. Other religions will be examined. The course will attend to the social context in which these religions developed and will examine their continuing influence on Western society.

Suggested background: RE/PY 1731 and RE 2721.

This course will be offered in 2014-15 and in alternating years thereafter.

RE 2724. RELIGIONS OF THE EAST.*Cat. II*

The purpose of this course is to examine, from the perspectives of history text, practice, and philosophy, some or all of the following religions: Hinduism, Buddhism, Taoism, Confucianism, and Shinto. The course will attend to the social context in which these religions began, their relations with their culture, their rituals and their continuing influences in the East and West.

Suggested background: PY/RE 1731 and RE 2721.

This course will be offered in 2013-14 and in alternating years thereafter.

RE/PY 2731. INTRODUCTORY ETHICS.*Cat. I*

This course will review at an introductory level theories of ethics, individual figures in the history of ethics, and selected problems in ethics. The emphasis will be on philosophical or religious ethics depending on the instructor.

RE 3721. TOPICS IN RELIGION.*Cat. I*

The purpose of this course is to expose students to somewhat more advanced or specialized study in religion. The focus will vary, but the material will be drawn from a particular religious thinker, a particular religious tradition or a particular historical or contemporary problem.

Suggested background: three other courses in religion.

RE/PY 3731. PROBLEMS IN ETHICS AND SOCIAL PHILOSOPHY.*Cat. I*

This course will examine in depth selected problems in ethical theory and social philosophy. The specific content or emphasis will be determined by the instructor.

Suggested background: knowledge of either RE/PY 2731 or PY 2712.

SPANISH (SP)

SP 1523. ELEMENTARY SPANISH I.*Cat. I*

A very intensive course that will introduce the student to the basic grammar of Spanish, emphasizing the four language skills: listening, speaking, reading and writing. It will also introduce the student to different aspects of Hispanic cultures in the U.S. and in Spanish-speaking countries. Students who have taken Spanish in high school are urged to take a placement exam before enrolling in either level of Elementary Spanish.

To enroll in this course, you must obtain written permission from one of the Spanish professors. This course is reserved for those students with only one year of high school Spanish or with no previous experience. This course is closed to native speakers of Spanish and heritage speakers except with written permission from the instructor.

SP 1524. ELEMENTARY SPANISH II.*Cat. I*

A continuation of Elementary Spanish I.

Recommended background: SP 1523.

This course is closed to native speakers of Spanish and heritage speakers except with written permission from the instructor.

SP 2521. INTERMEDIATE SPANISH I.*Cat. I*

A course designed to allow students to improve their written and oral skills, expand their vocabulary and review some important grammatical structures. Students will also read short stories and poems by some of the most representative Spanish American and Spanish authors, such as Horacio Quiroga, Jorge Luis Borges, Gabriela Mistral and Ana María Matute.

Recommended background: Elementary Spanish II.

This course is closed to native speakers of Spanish and heritage speakers except with written permission from the instructor.

SP 2522. INTERMEDIATE SPANISH II.*Cat. I*

A continuation of Intermediate Spanish I.

Recommended background: SP 2521.

This course is closed to native speakers of Spanish and heritage speakers except with written permission from the instructor.

SP 3521. ADVANCED SPANISH I.*Cat. I*

A course that continues to improve students' language skills while deepening their understanding of Hispanic cultures. Some of the topics studied are: the origins of Hispanic cultures in Spain and Spanish America; family; men and women in Hispanic societies; education; religion.

Recommended background: Intermediate Spanish II.

This course is closed to native speakers of Spanish except with written permission from the instructor.

SP 3522. ADVANCED SPANISH II.*Cat. I*

A continuation of Advanced Spanish I.

Recommended background: SP 3521.

This course satisfies the Inquiry Practicum requirement.

This course is closed to native speakers of Spanish except with written permission from the instructor.

SP 3523. TOPICS IN LATIN AMERICAN CULTURE.*Cat. II*

An introduction to various aspects of life in Latin American countries from early times to the present. Focusing on the social and political development of Latin America, the course will reveal the unity and diversity that characterize contemporary Latin American culture. Typical topics for study include: the precolumbian civilizations and their cultural legacy; the conquistadores and the colonial period; the independence movements; the search for and the definition of an American identity; the twentieth-century dictatorships; and the move toward democracy.

Recommended background: SP 3521 (Advanced Spanish I) and SP 3522 (Advanced Spanish II) or equivalent.

This course will be offered in 2014-15 and in alternating years thereafter.

This course satisfies the Inquiry Practicum requirement.

SP 3524. SPANISH-AMERICAN LITERATURE IN THE TWENTIETH CENTURY.*Cat. II*

This course, taught in the Spanish language, focuses on the major literary movements in Spanish America, from the "Modernista" movement at the turn of the century to the Latin American "Boom" of the 1960s to the political literature of the '70s and '80s. The work of representative authors, such as Rubén Darío, Julio Cortázar, Rosario Castellanos, Elena Poniatowska, will be discussed.

Recommended background: SP 3521 (Advanced Spanish I) and SP 3522 (Advanced Spanish II) or equivalent.

This course will be offered in 2013-14 and in alternating years thereafter.

This course satisfies the Inquiry Practicum requirement.

SP/ID 3525. SPANISH AMERICAN FILM/MEDIA: CULTURAL ISSUES.*Cat. II*

Through Latin American and Caribbean films, and other media sources, this course studies images, topics, and cultural and historical issues related to modern Latin American and the Caribbean. Within the context and influence of the New Latin American Cinema and/or within the context of the World Wide Web, radio, newspapers, and television the course teaches students to recognize cinematographic or media strategies of persuasion, and to understand the images and symbols utilized in the development of a national/regional identity. Among the topics to be studied are: immigration, gender issues, national identity, political issues, and cultural hegemonies.

Taught in advanced level Spanish. May be used toward foreign language Minor, or Major.

Recommended Background: SP 2521 and SP 2522, and SP 3523.

This course will be offered in 2013-14 and in alternating years thereafter.

This course satisfies the Inquiry Practicum requirement.

SP/ID 3526. COMPARATIVE BUSINESS ENVIRONMENTS.*Cat. II*

The basis of this course is a comparative study and analysis of specific Latin American and Caribbean business practices and environments, and the customs informing those practices. SP/ID 3526 focuses on countries such as Mexico, Argentina, Chile, Puerto Rico, and Costa Rica. The course's main objective is to study communication strategies, business protocol, and negotiation practices in the countries mentioned above. Through oral presentations and written essays, students will have the opportunity to explore other countries in Latin America and the Caribbean.

Taught in advanced level Spanish. May be used toward foreign language Minor, or Major.

Recommended Background: SP 2521 and SP 2522.

This course will be offered in 2014-15 and in alternating years thereafter.

This course satisfies the Inquiry Practicum requirement.

SP/ID 3527. TECHNICAL AND BUSINESS SPANISH.*Cat. II*

The course focuses on the linguistic concepts, terminology, and grammar involved in business and technical Spanish. Students will be required to produce and edit business documents such as letters, job applications, formal oral and written reports, etc. The objective of this course is to help students develop the basic written and oral communication skills to function in a business environment in Latin America and the Caribbean.

Recommended background: SP 2521 and SP 2522.

This course will be offered in 2013-14 and in alternating years thereafter.

This course satisfies the Inquiry Practicum requirement.

SP 3528. SPANISH CULTURE AND CIVILIZATION.*Cat. II*

This course is an introduction to various aspects of life in Spain, from early times to the present. The main focus is on Spain's social, political, and cultural development and its experience of diversity within its European context. Typical topics for study include: The Reconquista and the Arab influence in Spanish culture, the Spanish monarchy, its evolution into a democracy, the development of modern politics, the importance of the Spanish Civil war, and the influence of writers (such as Federico García Lorca), painters (such as Pablo Picasso), and art in general in modern Spanish culture. This course is taught in Spanish.

Recommended background: SP3521 (Advanced Spanish I) and SP 3522 (Advanced Spanish II) or equivalent.

This course will be offered in 2013-14 and in alternating years thereafter.

This course satisfies the Inquiry Practicum requirement.

SP/ID 3529. CARIBBEANNESS: VOICES OF THE SPANISH CARIBBEAN.*Cat. II*

A survey of Caribbean literature and arts that takes a multimedia approach to examining the different voices that resonate from the Spanish Caribbean and what appears to be a constant search for identity. By studying the works of major authors, films, music and the plastic arts, we will examine the socio-cultural context and traditions of this region in constant search for self-definition. Special attention will be given to the influential role ethnicity, colonialism, gender and socio-economic development play in the interpretation of works from Puerto Rico, Cuba, the Dominican Republic, Colombia and Venezuela as well as those of the Caribbean diaspora. This course is taught in Spanish.

Recommended background: SP3521 (Advanced Spanish I) and SP 3522 (Advanced Spanish II) or equivalent.

This course will be offered in 2013-14 and in alternating years thereafter.

This course satisfies the Inquiry Practicum requirement.

SP/ID 3530. SPANISH FILM/MEDIA: CULTURAL ISSUES.*Cat. II*

Through Spanish films, and other media sources, this course studies images, topics, and cultural and historical issues that have had an impact in the creation of a modern Spanish nation. This course focuses on current political and ideological issues (after 1936), the importance of Spanish Civil war, gender identity, and class, cultural and power relationships. This course is taught in Spanish.

This course will be offered in 2014-15 and in alternating years thereafter.

This course satisfies the Inquiry Practicum requirement.

SP/ID 3531. CONTEMPORARY US LATINO LITERATURE & CULTURE.*Cat. II*

This course introduces students to the field of Latino studies, paying particular attention to the cultural productions of U.S. Latinos in film, theater, music, fiction writing and cultural criticism. At the same time that this course reflects upon a transnational framework for understanding the continuum between U.S.

Latinos and Latin American/Caribbean communities, we closely examine more U.S. based arguments supporting and contesting the use of Latino as an ethnic-racial term uniting all U.S. Latino communities. We examine the ways in which U.S. Latinos have manufactured identities within dominant as well as counter cultural registers. In this course, special attention is given to the aesthetics of autobiography and to how Latino writers experiment with this genre in order to address changing constructions of immigration, language, exile, and identity. This course is taught in English.

This course will be taught in 2014-15 and in alternating years thereafter.

This course satisfies the Inquiry Practicum requirement.

SP3532. STUDIES IN SPANISH LITERATURE: ARTISTIC EXPRESSION AND NATION BUILDING.*Cat. II*

This course introduces students to the study of Spanish literature through analytical readings of essays, poetry, drama, and fiction of representative Spanish writers from medieval to contemporary times. The selected authors to be studied reflect Spanish society's cultural and political efforts conducive to a nation building process. Among the topics to be covered are: Literary and artistic movements, nationalist and religious discourses, cultural miscegenation, gender issues, regional, political and class conflicts, the role of the intellectual, and strategies for the construction of identities.

This course is taught in Spanish.

Recommended Background: SP 3522 and SP 3528.

This course will be offered in 2014-15 and in alternating years thereafter.

This course satisfies the Inquiry Practicum requirement.

WRITING (WR) AND RHETORIC (RH)

WR 1010. ELEMENTS OF WRITING.*Cat. I.*

This course is designed for students who wish to work intensively on their writing. The course will emphasize the processes of composing and revising, the rhetorical strategies of written exposition and argumentation, and the reading and citation practices central to academic inquiry. In a workshop setting, students will write a sequence of short papers and complete one longer writing project based on multiple source texts; learn to read critically and respond helpfully to each other's writing; and make oral presentations from written texts. Where applicable, the topical theme of the class will be provided via the Registrar's office.

Note: Students who have taken EN/WR 2211 cannot receive credit for this course.

WR 1011. WRITING ABOUT SCIENCE & TECHNOLOGY.*Cat. I.*

This course will examine the appropriate dissemination of scientific information in common science writing genres such as science journalism, consulting reports and white papers, and policy and procedure documents. In a workshop setting, students will write and revise documents that promote broad understanding of scientific research and analysis of specialized knowledge. Course lectures and discussions investigate ethics of scientific reporting and teach students how to recognize deceptive texts and arguments (both quantitative and qualitative). The course is reading and writing intensive and is intended for students with backgrounds in a scientific discipline who are interested in applying their disciplinary knowledge.

Note: Students who have taken EN/WR 2211 cannot receive credit for this course.

WR 2210. BUSINESS WRITING AND COMMUNICATION.*Cat. I.*

This course emphasizes the standard written genres of professional, workplace communication. Students will analyze the history, purposes, conventions, and social consequences of a variety of business communications, focusing on digital and print correspondence, reports, and proposals directed to internal and external audiences. Students will learn about the culture of a professional environment and the role of writing in structuring identity and relationships within that context. Classes will be conducted as interactive writing workshops in which students assess and respond to rhetorical scenarios and sample texts from a variety of professional worksites. Students will create portfolios, producing professional writing samples they may use on the job market.

Suggested background: WR 1010 or WR 1011

Note: Students who have taken EN/WR 2210 cannot receive credit for this course.

WR 2213. INTRODUCTION TO JOURNALISM.*Cat. I.*

The course is for students who may wish to make careers in journalism or communications and for those who wish to understand the history, function, production and contemporary challenges of print journalism. Students will analyze articles from newspapers, magazines and Web sites. They will learn and practice the skills of the journalist: finding the story, researching, interviewing, writing on deadline, copy-editing and proof-reading. Classes will also cover matters such as objectivity, fairness, ethics and libel, as well as wider issues of mass communication such as agenda setting, citizen journalism and the implications of converging media. To give students a more keen sense of audience, work will be read and discussed in class. Students will be urged to write for the college newspaper. Publication beyond the campus will be strongly encouraged.

WR 2310. VISUAL RHETORIC.*Cat. I*

This course explores how visual design is used for purposes of identification, information, and persuasion. It looks at many modes of visual communication, such as icons, logos, trademarks, signs, product packaging, infographics, posters, billboards, ads, exhibits, graffiti, page layout, films, television, videogames, and web sites. The course provides an overview of the history of graphic design movements, as well as analytical tools to understand how visual design encodes messages and the role visual communication plays in contemporary culture. Students will write about and create a number of visual media in this project-centered class.

Suggested background: WR 1010

Note: Students who have taken EN/WR 3211 cannot receive credit for this course.

WR 3011. TEACHING WRITING*Cat. II.*

Teaching Writing introduces students to the theory and practice of written composition. Students research and read about the writing process and how best to support it through the practice of explicit teaching and tutoring. They learn specific strategies that can support writers as they plan, draft, and revise written work in a number of genres, and they study effective ways to provide helpful feedback on drafts. They also learn about and practice navigating the social, political and interpersonal dynamics of the teacher/tutor-student relationship through a tutoring internship at the Writing Center and through assignments prompting them to develop lesson plans and instructional handouts. This course will help students improve their own writing and read their own and others' writing more critically. It will be especially useful for those who plan to teach or tutor writing in the future.

Recommended background: WR 1010 Elements of Writing

Note: Students who have taken WR/EN 3011 Peer Tutoring in Writing cannot receive credit for this course

WR 3112. RHETORICAL THEORY.*Cat. I.*

Rhetoric concerns both the art of mastering the available means of persuasion and the study of how oral, written, and visual communication projects the intentions of individuals and groups, makes meanings, and affects audiences. The purpose of this course therefore is two-fold. It is intended to help students become more effective communicators by learning about the rhetorical situation and various rhetorical techniques, and it is designed to help them understand how various forms of communication work by learning some of the philosophies and strategies of rhetorical analysis.

Recommended background: Introduction to Rhetoric

Note: Students who have taken RH 3112 cannot receive credit for this course.

WR 3210. TECHNICAL WRITING.*Cat. I.*

Technical writing combines technical knowledge with writing skills to communicate technology to the world. This course introduces the fundamental principles of technical communication, and the tools commonly used in the technical writing profession. Topics include user and task analysis, information design, instructional writing, and usability testing. Students learn to use the technical writing process to create user-centered documents that combine text, graphics, and visual formatting to meet specific information needs. Students create a portfolio of both hardcopy and online documentation, using professional tools such as FrameMaker, Acrobat, and RoboHelp. Recommended background: WR 1010, or equivalent writing course.

WR 3214. WRITING ABOUT DISEASE & PUBLIC HEALTH.*Cat. I.*

This writing workshop focuses on the purposes and genres of writing about disease and public health. We will consider how biomedical writers communicate technical information about disease and public health to general audiences; how writers capture the human experience of disease and health care; how writers treat the public policy implications of disease; and how writers design publicity to promote public health. We will examine such genres as the experimental article, news reports, medical advice, profiles, commentary, and public health messages.

Recommended background: WR 1010 Elements of Writing or equivalent writing courses.

WR 3310. DIGITAL RHETORIC.*Cat. II*

This course will explore the changing nature of rhetoric and communication in a digital environment by articulating a theory of rhetoric that accounts for digital communication. In a seminar format, students will read and respond to a number of readings that consider the roles of databases, algorithms, social networks, and the like on contemporary communication practices. Students will put into practice their theories on digital rhetoric through a series of class projects: website design, podcasting, interactive storytelling, database design, virtual representations, and the like. Throughout the course, students will recursively understand their practices through theoretical works and gain new insight into theory through the practice of writing in digital spaces.

Recommended background: WR 2211 Rhetoric of Visual Design

WR 4111. RESEARCH METHODS IN WRITING.*Cat. I*

This methodology course introduces students to issues in the study of writing such as the history and uses of literacy, the relationship of thought to language, the role of writing in producing knowledge, and research on composing. The focus of the course will be on professional and academic writing. In this project-based class, students will develop research questions, construct a relevant method study, and carry out that study. The purpose of this course is to add to students analytical approaches to writing and communicative situations.

Recommended background: WR 1010 Elements of Writing, WR 2310 Rhetoric of Visual Design, WR 3112

Rhetorical Theory.

Note: Students who have taken RH 3111 cannot receive credit for this course.

INTERACTIVE MEDIA AND GAME DEVELOPMENT

IMGD 1000. CRITICAL STUDIES OF INTERACTIVE MEDIA AND GAMES.*Cat. I*

This course introduces non-technical studies of computer-based interactive media and games. The course develops a vocabulary for discussing games and other interactive media, and tools for analyzing them. Students are expected to provide written critiques using the critical approaches presented in the course. The games and other interactive media critiqued may be commercially available or under development.

IMGD 1001. THE GAME DEVELOPMENT PROCESS.*Cat. I*

This course discusses the process of game development. It examines the roles of different participants in the development process and how the technical development and the artistic development proceed in tandem. Group work is emphasized, especially the importance of collaboration between technical and artistic efforts. Students are expected to participate in game development using appropriate game development tools.

IMGD 1002. STORYTELLING IN INTERACTIVE MEDIA AND GAMES.*Cat. I*

This course explores different types of story within gaming and other interactive media. It delineates between linear, branching, and emergent storytelling, identifies hybrids, and finds new modes of making compelling narrative. A variety of games are discussed, including early text-based adventures, role-playing games, shooters, and strategy games. Students will construct characters, situations, and narratives through game play and scripted cut scenes. Students will explore and use visual storytelling techniques.

IMGD 2000. SOCIAL ISSUES IN INTERACTIVE MEDIA AND GAMES.

Cat. I

This course provides students with a realistic assessment of the potential and problems related to interactive media and games, especially computer games, and their effects on society. Topics include individual and group behavior, diversity, human responsibility, ethical and legal issues, and intellectual property. The course examines the issues from various points of view, and discover the political, social, and economic agendas of the people or groups championing those points of view. Students will write papers, participate in discussions, and research related topics.

Recommended background: IMGD 1000.

IMGD 2001. PHILOSOPHY AND ETHICS OF COMPUTER GAMES.

Cat. II

This course introduces students to some of the political and ethical dimensions of the new entertainment modalities. Students will explore such issues as representation and power (e.g., gaming and disability, and race stereotyping in games), the phenomenology of virtual reality, capitalism and the commodification of leisure, gender and sexual violence, and cyberspace and democracy. Students will also develop critical tools for evaluating the ethical and social content of their own and others' games. In addition to writing several analytical papers on the critical theory of technology, students will be encouraged to work on game designs exploring philosophical or social themes.

Recommended background: IMGD 1000.

This course is offered in 2013-14 and in alternating years thereafter.

IMGD 2005. MACHINIMA (FILM MAKING IN VIRTUAL ENVIRONMENTS).

Cat. I

This course will address the cinematographic and narrative techniques involved with film making using video-game technology. Creation and development of characters, environments, and narrative structures will be explored. Using commercial game engines and audio/video editors, students will write, design, and produce complete animated movies. Industrial and artistic applications of this film making technique are discussed as well as how Machinima is contextualized in the history of film animation and visualization.

Recommended background: IMGD 1002.

IMGD 2030. GAME AUDIO I.

This course serves as an introduction to game audio, where the basics of audio theory and production are discussed along with practical applications for use in game development. Topics may include music, sound effects, dialogue, soundscape design, digital signal processing, basic audio engine principles, and the aesthetic vs. technical considerations in game audio production. Lab exercises may include an introduction to audio editing and mixing, dynamics and effects processing, creating and timing sound effects to character animations, mixing for cinematics, and audio integration using a 3D engine.

Recommended background: IMGD 1000 and IMGD 1001.

This course assumes no prior knowledge of audio production.

AR/IMGD 2101. 3D MODELING I.

Cat. I

3D modeling is concerned with how to render created forms in a virtual environment. This course covers 3D modeling applications in video game development, film production, product design and fine art. Topics may include creating and armature, modeling organic and hard surfaces and sculpting using traditional techniques applied to a 3D model. Students will create works suitable for presentation in professional quality portfolio.

Recommended background: AR1100 and AR1101.

IMGD/AR 2201. THE ART OF ANIMATION I.

Cat. I

This course examines the fundamentals of computer generated 2D and 3D modeling and animation as they apply to creating believable characters and environments. Students will learn skeletal animation and traditional polygonal animation, giving weight and personality to characters through movement, environmental lighting, and changing mood and emotion. Students will be expected to master the tools of 3D modeling and skinning, and scripting of behaviors.

Recommended background: AR 1101.

IMGD 2500. DESIGN OF TABLETOP STRATEGY GAMES.

Cat. II

The objective of the course is to teach students how to design board strategy games. The design principles are transferable to other types of games, such as computer games. Game quality issues such as rules unambiguity, depth, complexity, branching width, balance, and historical content are examined.

Basic elements and types of game rules, such as map gridding, restricted play choices, resource limitations, and depths of game economics are discussed. Central to the course is the game design project: students design, playtest, and develop their own game. One two-hour laboratory a week covers play, and playtesting, and supports the game design project.

Recommended background: IMGD 1000

This course will be offered in 2014-15 and in alternating years thereafter.

IMGD/AR 2700. DIGITAL PAINTING.

This course covers painting techniques as applied to texturing a 3D asset or illustration/conceptual art. Topics include are color theory, study of form, lighting, applying traditional painting ideas to the digital format, character design, generation of ideas and a history of digital painting. Each class features a demonstration on the topic followed by individual critique and study. Students work towards a final project that may be suitable for an Art portfolio.

Recommended Background: AR 1101, AR 2202

IMGD 2900. DIGITAL GAME DESIGN I.

Cat. I

Software engineering and art production are the means of digital game development, but the end is an experience. Game design is the process of creating, describing, implementing and iteratively refining that experience. This team-oriented, project-based course provides opportunities for students to develop hands-on expertise with digital game design through a combination of practical implementation, in-class critique and playtesting. A focus of the course is the functional expression of design through the use of game engine scripting. Students keep a weekly journal of their design experiences. A final exam tests their knowledge of design concepts and terminology.

Recommended Background: IMGD 1000, IMGD 1001

IMGD 3000. TECHNICAL GAME DEVELOPMENT I.

Cat. I

This course teaches technical Computer Science aspects of game development, with the focus of the course on low-level programming of a computer games. Topics include 2D and 3D game engines, simulation-type games, analog and digital controllers and other forms of tertiary input. Students will implement games or parts of games, including exploration of graphics, sound, and music as it affects game implementation.

Recommended background: CS 2303.

IMGD 3100. NOVEL INTERFACES FOR INTERACTIVE ENVIRONMENTS.

Cat. II

This course focuses on the design and evaluation of novel user interfaces that provide greater input and output expressiveness than the keyboard, mouse, or game pad. The course covers the related applications of immersive gaming, teleoperated robotics, and mobile users. Input sensors, such as those providing motion, attitude, and pressure data, are used to explore novel input methods, and how they may be effectively used to design innovative experiences. Through a combination of lecture and hands-on work, students learn to build prototype systems and to critically evaluate different alternatives. Students are expected to program several alternative input/output systems as part of this course

Recommended Background: IMGD 1001, and either CS 2301 or CS 2303

This course is offered in 2013-14 and in alternating years thereafter.

IMGD/AR 3101. 3D MODELING II.

This course will build upon the skills learned in 3D MODELING with studies in life drawing/anatomy study and application towards completed character models. Students will create high resolution sculpts for real time game environments and animation. Topics covered will be character design as it applies to 3D MODELING, creating realistic design sculpts and incorporating them into a game environment as well as the study of anatomy as it applies to organic modeling.

Recommended Background: AR 1101, IMGD/AR 2101, AR 2202

IMGD/AR 3201. ANIMATION II.

This course will build upon the techniques learned in IMGD 2201/AR 2201. Students will learn advanced animation techniques applied to lip syncing, facial movement, emotion communication, and body language. Topics covered may include character rigging, biped and quadruped animation, and animation pipelines. Students will create animated scenes for narrative video and/or real time game environments.

Recommended Background: AR/IMGD 2201, AR/IMGD 2202.

Suggested additional background: IMGD 2005.

IMGD 3500. ARTISTIC GAME DEVELOPMENT I.*Cat. I*

This course focuses on the unique problems presented to the artist when working in game development. Students learn to work with 2D sprite-based art, including tiling and simple animation. They then explore 3D architecture, level design, texturing, and environmental animation. Students will use art to create compelling game experiences through environments by designing their own levels in both 2D and 3D games.

Recommended background: IMGD/AR 2101 and IMGD/AR 2201.

IMGD/AR 3700. CONCEPT ART AND CREATIVE ILLUSTRATION.

This course covers drawing as it applies to concept art and illustration. The course begins with study of a human model and representational drawing. Following this, students work on drawing from the mind and applying the lessons learned from the figure drawing to creating concept art and illustration. Topics covered are shape recognition and recalling, inventing from the mind, creative starters, study of form and light, visual composition and developing a personal approach, working with individual strengths to create a compelling visual design. Students create a series of concept art exercises and apply these skills towards a personal project of their own.

Recommended Background: AR 2202, IMGD/AR 2700

IMGD 4000. TECHNICAL GAME DEVELOPMENT II.*Cat. I*

This course focuses on the application of advanced Computer Science topics as they impact game development. Networking and distributed systems issues are addressed, including scalability and latency compensation techniques, for designing games for an online multi-player environments. AI, graphics and physics techniques specific to game development are discussed. Students will implement games or parts of games that apply advanced Computer Science topics.

Recommended background: IMGD 3000.

IMGD 4100. ARTIFICIAL INTELLIGENCE FOR INTERACTIVE MEDIA AND GAMES.*Cat II*

Advanced software design and programming techniques from artificial intelligence are key contributors to the experience of modern computer games and virtual environments, either by directly controlling a non-player character or through more subtle manipulation of the environment. This course will cover the current state of the art in this area, as well as prepare students for the next generation of AI contributions. We will study the application of AI techniques such as search, planning, machine learning, emotion modeling and natural language processing, to game problems such as navigation, strategy, believability and narrative control. Students will implement several small AI demonstration games.

Recommended background: IMGD 4000.

Students may not receive credit for both IMGD 4100 and IMGD 400X.

This course is offered in 2013-14 and in alternating years thereafter.

IMGD 4200. HISTORY AND FUTURE OF IMMERSIVE AND INTERACTIVE MEDIA.*Cat II*

This course will familiarize students with the history of the development, deployment, commercialization, and evolution of immersive and active media. The lesson plan will cover a broad range of enabling technologies, such as geometric perspective drawing, pre-20th-century panoramic displays, photography and the stereoscope, sound recording and reproduction, motion pictures, radio and television, the planetarium, immersive and 3-dimensional cinema, and special attraction venues, with a particular focus on digital games. Current trends and future directions will also be considered. Students will attend seminars and lectures, read and discuss texts on media history and aesthetics, and write an original research paper. Midterm and final exams test students' knowledge and understanding of important events and developments. A student may not receive credit for both IMGD 4200 and IMGD 5200.

Recommended background: IMGD 1000, EN 2211 and either IMGD 2000 or IMGD 2001.

Students may not receive credit for both IMGD 4200 and IMGD 402X.

This course is offered in 2013-14 and in alternating years thereafter.

IMGD 4500. ARTISTIC GAME DEVELOPMENT II.*Cat. I*

This course focuses on the integration and organization of the various artistic elements used in game development. The course examines user interaction, interface design, and existing paradigms in current games. Students will combine elements of level design, animation, music, sound, and writing to create an aesthetically appealing game.

Recommended background: IMGD 1002, IMGD 3500, MU 1611.

IMGD 4600. SERIOUS GAMES.*Cat II*

This course explores the application of the technologies and design principles of interactive media and game development beyond traditional entertainment. The purpose of such applications is typically to change people's behaviors, knowledge and/or attitudes in diverse areas including health care, training, education, simulation, politics, marketing and art. Students read about, experiment with, compare and discuss examples, as well as the underlying philosophies and issues specific to this genre, such as domain analysis and rigorous evaluation. Students in groups also research a new application and produce a detailed design document and mock-up. Advanced programming skill is not required, but a background in game design is strongly recommended.

Recommended background: IMGD 1001 and either IMGD 2000 or IMGD 2001.

Students may not receive credit for both IMGD 4600 and IMGD 404X.

This course is offered in 2014-15 and in alternating years thereafter.

IMGD 4700. ADVANCED STORYTELLING: QUEST LOGIC AND LEVEL DESIGN.*Cat II*

This course provides an in-depth examination of storytelling as it is currently done in 2D and 3D games through a study of quests and construction of gaming spaces. Level designers turn stories into games through building virtual spaces and populating them with non-player characters who have their own objectives. Cinematics are used to extend the narrative space. The course requires students to build multiple virtual spaces that have a history and a population with present needs. Students need to work out plotting through the logic of a quest, build several areas that supports that logic and create cinematics to extend their narrative space.

Recommended background: IMGD 1002, or equivalent knowledge.

Students may not receive credit for both IMGD 4700 and IMGD 403X.

This course is offered in 2014-15 and in alternating years thereafter.

INTERDISCIPLINARY

FY 1100 & FY 1101. THE GREAT PROBLEMS SEMINARS.*Cat. I*

The Great Problems Seminars (GPS) are courses designed to engage Worcester Polytechnic Institute's first-year students with current events, societal problems, and human needs. Each seminar starts with an important problem and introduces some of the key disciplinary tools that could be used to attack the problem. The focus for most of the second half of the course will be a research project related to the GPS theme. Students will present their project work in a poster session at the end of the term. Each seminar is developed and presented by an interdisciplinary team of faculty. To participate, students must enroll in the two course sequence. Academic credit for the GPS will depend on the theme and the faculty who develop the seminar.

ID/SS 2050. SOCIAL SCIENCE RESEARCH FOR THE IQP.*Cat. I*

This course is open to students accepted to off-campus IQP centers and programs. The course introduces students to research design, methods for social science research, and analysis. It also provides practice in specific research and field skills using the project topics students have selected in conjunction with sponsoring agencies. Students learn to develop social science hypotheses based upon literature reviews in their topic areas and apply concepts drawn from social psychology, anthropology, sociology, economics and other areas as appropriate. Students make presentations, write an organized project proposal, and develop a communication model for reporting their project findings.

Some sections of this course may be offered as Writing Intensive (WI).

ID 3100. TEACHING METHODS IN MATHEMATICS AND SCIENCE.

Cat. II

Within the context of contemporary secondary education in mathematics and science (biology, chemistry, physics), ID 3100 introduces and demonstrates effective teaching methods as they relate to curriculum goals and current methods of assessment. These methods take into account diverse learning styles as well as various technological resources. Topics to be covered include: a brief history of education; curriculum and course guidelines (Massachusetts Education Reform and regulations 603 CMR 7.00, state curricular frameworks, national standards); legal issues; developing a course syllabus; and the issue of breadth versus depth in course planning and delivery. The course also covers practical questions of organizing, delivering and assessing a course. This course is intended primarily for students interested in completing the Massachusetts requirements for teacher licensing. This program is aimed primarily at majors in mathematics, physics, chemistry and biology wishing to be licensed to teach in middle or high school in one of those disciplines. A portion of the course requires the observation of master teachers at the Massachusetts Academy of Mathematics and Science, who will work with all students in the course to assist them in beginning to acquire the appropriate skills to conduct their own classes in mathematics or science at the secondary school level.

Recommended background: SS 2401, Psychology of Education.

This course will be offered in 2014-15 and in alternating years thereafter.

ID/AR 3150. LIGHT, VISION AND UNDERSTANDING.

Cat. II

By using material from the sciences and the humanities this course examines the ways in which ideas of knowledge and of human nature have been fashioned. The specific topics include physical theories about light, biological and psychological theories of visual perception, and artistic theories and practices concerned with representation. The mixing of material from different academic disciplines is deliberate, and meant to counter the notion that human pursuits are "naturally" arranged in the neat packages found in the modern university. The course draws upon the physical and social sciences, and the humanities, to examine how those fields relate to one another, and how they produce knowledge and self-knowledge. Cultural as well as disciplinary factors are assessed in this process.

Light, Vision and Understanding is conducted as a seminar. The diverse collection of reading materials includes a number of primary texts in different fields. In addition, the students keep a journal in which they record the results of numerous individual observations and experiments concerning light and visual perception. The course can fit into several areas of depth as well as serve as a starting point for an IQP. There are no specific requirements for this course, although some knowledge of college-level physics, as well as an acquaintance with the visual arts, is helpful.

This course will be offered in 2014-15 and in alternating years thereafter.

ID/SP 3525. SPANISH AMERICAN FILM/MEDIA: CULTURAL ISSUES.

Cat. II

Through Latin American and Caribbean films, and other media sources, this course studies images, topics, and cultural and historical issues related to modern Latin American and the Caribbean. Within the context and influence of the New Latin American Cinema and/or within the context of the World Wide Web, radio, newspapers, and television the course teaches students to recognize cinematographic or media strategies of persuasion, and to understand the images and symbols utilized in the development of a national/regional identity. Among the topics to be studied are: immigration, gender issues, national identity, political issues, and cultural hegemonies.

Taught in advanced level Spanish. May be used toward foreign language Minor, or Major.

Recommended Background: SP 2521 and SP 2522, and SP 3523.

This course will be offered in 2013-14 and in alternating years thereafter.

ID/SP 3526. COMPARATIVE BUSINESS ENVIRONMENTS.

Cat. II

The basis of this course is a comparative study and analysis of specific Latin American and Caribbean business practices and environments, and the customs informing those practices. ID/SP 3526 focuses on countries such as Mexico, Argentina, Chile, Puerto Rico, and Costa Rica. The course's main objective is to study communication strategies, business protocol, and negotiation practices in the countries mentioned above. Through oral presentations and written essays,

students will have the opportunity to explore other countries in Latin America and the Caribbean.

Taught in advanced level Spanish. May be used toward foreign language Minor, or Major.

Recommended Background: SP 2521 and SP 2522.

This course will be offered in 2014-15 and in alternating years thereafter.

ID/SP 3527. TECHNICAL AND BUSINESS SPANISH.

Cat. II

The course focuses on the linguistic concepts, terminology, and grammar involved in business and technical Spanish. Students will be required to produce and edit business documents such as letters, job applications, formal oral and written reports, etc. The objective of this course is to help students develop the basic written and oral communication skills to function in a business environment in Latin America and the Caribbean.

Recommended background: SP 2521 and SP 2522.

This course will be offered in 2014-15 and in alternating years thereafter.

ID/SP 3529. CARIBBEANNESS: VOICES OF THE SPANISH CARIBBEAN.

Cat II

A survey of Caribbean literature and arts that takes a multimedia approach to examining the different voices that resonate from the Spanish Caribbean and what appears to be a constant search for identity. By studying the works of major authors, films, music and the plastic arts, we will examine the socio-cultural context and traditions of this region in constant search for self-definition. Special attention will be given to the influential role ethnicity, colonialism, gender and socio-economic development play in the interpretation of works from Puerto Rico, Cuba, the Dominican Republic, Colombia and Venezuela as well as those of the Caribbean diaspora. This course is taught in Spanish.

Recommended background: SP3521 (Advanced Spanish I) and SP 3522 (Advanced Spanish II) or equivalent.

This course will be offered in 2013-14 and in alternating years thereafter.

ID/SP 3530. SPANISH FILM/MEDIA: CULTURAL ISSUES.

Cat II

Through Spanish films, and other media sources, this course studies images, topics, and cultural and historical issues that have had an impact in the creation of a modern Spanish nation. This course focuses on current political and ideological issues (after 1936), the importance of Spanish Civil war, gender identity, and class, cultural and power relationships. This course is taught in Spanish.

This course will be offered in 2014-15 and in alternating years thereafter.

ID/SP 3531. CONTEMPORARY US LATINO LITERATURE & CULTURE.

Cat II

This course introduces students to the field of Latino studies, paying particular attention to the cultural productions of U.S. Latinos in film, theater, music, fiction writing and cultural criticism. At the same time that this course reflects upon a transnational framework for understanding the continuum between U.S. Latinos and Latin American/Caribbean communities, we closely examine more U.S. based arguments supporting and contesting the use of Latino as an ethnic-racial term uniting all U.S. Latino communities. We examine the ways in which U.S. Latinos have manufactured identities within dominant as well as counter cultural registers. In this course, special attention is given to the aesthetics of autobiography and to how Latino writers experiment with this genre in order to address changing constructions of immigration, language, exile, and identity. This course is taught in English.

This course will be taught in 2014-15 and in alternating years thereafter.

MATHEMATICAL SCIENCES

The second digit in mathematical sciences course numbers is coded as follows:

- 0 — Basic
- 2 — Applied mathematics (general)
- 4 — Applied mathematics (differential equations)
- 6 — Statistics and probability
- 8 — Mathematics (general)

MA 1020. CALCULUS I WITH PRELIMINARY TOPICS.

Cat. I (14-week course)

This course includes the topics of MA 1021 and also presents selected topics from algebra, trigonometry, and analytic geometry.

This course, which extends for 14 weeks and offers 1/3 unit of credit, is designed for students whose precalculus mathematics is not adequate for MA 1021.

Although the course will make use of computers, no programming experience is assumed.

Students may not receive credit for both MA 1020 and MA 1021.

MA 1021. CALCULUS I.

Cat. I

This course provides an introduction to differentiation and its applications.

Topics covered include: functions and their graphs, limits, continuity, differentiation, linear approximation, chain rule, min/max problems, and applications of derivatives.

Recommended background: Algebra, trigonometry and analytic geometry.

Although the course will make use of computers, no programming experience is assumed.

Students may not receive credit for both MA 1021 and MA 1020.

MA 1022. CALCULUS II.

Cat. I

This course provides an introduction to integration and its applications.

Topics covered include: inverse trigonometric functions, Riemann sums, fundamental theorem of calculus, basic techniques of integration, volumes of revolution, arc length, exponential and logarithmic functions, and applications.

Recommended background: MA 1021. Although the course will make use of computers, no programming experience is assumed.

MA 1023. CALCULUS III.

Cat. I

This course provides an introduction to series, parametric curves and vector algebra.

Topics covered include: numerical methods, indeterminate forms, improper integrals, sequences, Taylor's theorem with remainder, convergence of series and power series, polar coordinates, parametric curves and vector algebra.

Recommended background: MA 1022. Although the course will make use of computers, no programming experience is assumed.

MA 1024. CALCULUS IV.

Cat. I

This course provides an introduction to multivariable calculus.

Topics covered include: vector functions, partial derivatives and gradient, multivariable optimization, double and triple integrals, polar coordinates, other coordinate systems and applications.

Recommended background: MA 1023. Although the course will make use of computers, no programming experience is assumed.

MA 1031. INTRODUCTION TO ANALYSIS I.

Cat. I

This course provides the fundamentals of mathematical thinking and writing for mathematical proof in analysis. Topics covered include mathematical logic, set theory, functions, cardinality, topology of the real line, limits of sequences.

MA 1032. INTRODUCTION TO ANALYSIS II.

Cat. I

This course uses the tools developed in MA 1031 to explore the theory of differentiability and introduces the Riemann integral. Topics covered include limits and continuity of functions, the intermediate value theorem, differentiation, mean value theorems, l'Hopital's rule, antiderivatives, the Riemann integral, Riemann integrability.

Recommended background: MA 1031

MA 1033. INTRODUCTION TO ANALYSIS III.

Cat. I

This course develops the theory of integration and provides an introduction to series of numbers and series of functions. Topics covered include the Fundamental Theorem of Calculus, integration by parts, change of variable, series, convergence tests, rearrangements of series, sequences and series of functions, power series, Taylor series.

Recommended background: MA 1032

MA 1034. INTRODUCTION TO ANALYSIS IV.

Cat. I

The course provides a rigorous introduction to multivariable analysis. Topics covered include vector algebra, functions of several variables, partial derivatives, gradient, multiple integrals, Green's theorem, Stokes' theorem, divergence theorem. Recommended background: MA 1033

MA 1120. CALCULUS II. (SEMESTER VERSION)

Cat. I

The topics for integral calculus (MA 1022) are covered in this course: the concept of the definite integral, the Fundamental Theorem of Calculus, integration techniques, and applications of integration. Applications include: area, volume, arc length, center of mass, work, force, and exponential growth and decay. Logarithmic and exponential functions are studied in depth. Arithmetic and geometric sequences and series will also be covered. Key historical events in the development of integral calculus are examined. Technology will be used as appropriate to support the material being studied.

This course extends for 14 weeks and offers 1/3 unit of credit. It is designed for students who would benefit from additional contact hours and who need to strengthen their mathematical background. Although the course will make use of computers, no programming experience is assumed.

Students may not receive credit for both MA 1120 and MA 1022 or MA 1102.

MA 1971. BRIDGE TO HIGHER MATHEMATICS.

Cat. I

The principal aim of this course is to introduce and enhance mathematical thinking. The course is intended not only for beginning mathematics, statistics or actuarial students, but also for students seeking to further their mathematical interests and those simply curious about logic and reason. Students in the course will be expected to explain, justify, defend, disprove, conjecture and verify mathematical ideas, both verbally and in writing. One expected by-product of this training is that students will develop concrete proof-writing skills which will improve their prospects for success in more advanced mathematics courses.

When appropriate, course discussion will touch on current events in the mathematical sciences, including recently solved problems and open challenges facing today's scientists.

Recommended background: at least two courses in Mathematical Sciences at WPI, or equivalent.

MA 2051. ORDINARY DIFFERENTIAL EQUATIONS.

Cat. I

This course develops techniques for solving ordinary differential equations. Topics covered include: introduction to modeling using first-order differential equations, solution methods for linear higher-order equations, qualitative behavior of nonlinear first-order equations, oscillatory phenomena including spring-mass system and RLC-circuits and Laplace transform. Additional topics may be chosen from power series method, methods for solving systems of equations and numerical methods for solving ordinary differential equations.

Recommended background: MA 1024.

MA 2071. MATRICES AND LINEAR ALGEBRA I.

Cat. I

This course provides a study of computational techniques of matrix algebra and an introduction to vector spaces.

Topics covered include: matrix algebra, systems of linear equations, eigenvalues and eigenvectors, least squares, vector spaces, inner products, and introduction to numerical techniques, and applications of linear algebra.

Recommended background: None.

MA 2073. MATRICES AND LINEAR ALGEBRA II.

Cat. I

This course provides a deeper understanding of topics introduced in MA 2071 and also continues the development of those topics. Topics covered include: abstract vector spaces, linear transformations, matrix representations of a linear transformation, characteristics and minimal polynomials, diagonalization, eigenvalues and eigenvectors, inner product spaces.

This course is design primarily for Mathematical Science majors and those interested in the deeper mathematical issues underlying linear algebra.

Undergraduate credit may not be earned both for this course and for MA 3071.

Recommended background: MA 2071.

MA 2201/CS 2022. DISCRETE MATHEMATICS.

Cat. I

This course serves as an introduction to some of the more important concepts, techniques, and structures of discrete mathematics providing a bridge between computer science and mathematics.

Topics include functions and relations, sets, countability, groups, graphs, propositional and predicate calculus, and permutations and combinations.

Students will be expected to develop simple proofs for problems drawn primarily from computer science and applied mathematics.

Intended audience: computer science and mathematical sciences majors.

Recommended background: None.

MA 2210. MATHEMATICAL METHODS IN DECISION MAKING.

Cat. I

This course introduces students to the principles of decision theory as applied to the planning, design and management of complex projects. It will be useful to students in all areas of engineering, actuarial mathematics as well as those in such interdisciplinary areas as environmental studies. It emphasizes quantitative, analytic approaches to decision making using the tools of applied mathematics, operations research, probability and computations. Topics covered include: the systems approach, mathematical modeling, optimization and decision analyses. Case studies from various areas of engineering or actuarial mathematics are used to illustrate applications of the materials covered in this course.

Recommended background: MA 1024. Suggested background: Familiarity with vectors and matrices. Although the course makes use of computers, no programming experience is assumed. Students who have received credit for CE 2010 may not receive credit for MA 2210.

MA 2251. VECTOR AND TENSOR CALCULUS.

Cat. I

This course provides an introduction to tensor and vector calculus, an essential tool for applied mathematicians, scientists, and engineers.

Topics covered include: scalar and vector functions and fields, tensors, basic differential operations for vectors and tensors, line and surface integrals, change of variable theorem in integration, integral theorems of vector and tensor calculus. The theory will be illustrated by applications to areas such as electrostatics, theory of heat, electromagnetics, elasticity and fluid mechanics.

Recommended background: MA 1024.

MA 2271. GRAPH THEORY.

Cat. II

This course introduces the concepts and techniques of graph theory—a part of mathematics finding increasing application to diverse areas such as management, computer science and electrical engineering. Topics covered include: graphs and digraphs, paths and circuits, graph and digraph algorithms, trees, cliques, planarity, duality and colorability.

This course is designed primarily for Mathematical Science majors and those interested in the deeper mathematical issues underlying graph theory.

Undergraduate credit may not be earned both for this course and for MA 3271.

Recommended background: MA 2071.

This course will be offered in 2014-15 and in alternating years thereafter.

MA 2273. COMBINATORICS.

Cat. II

This course introduces the concepts and techniques of combinatorics—a part of mathematics with applications in computer science and in the social, biological, and physical sciences. Emphasis will be given to problem solving. Topics will be selected from: basic counting methods, inclusion-exclusion principle, generating functions, recurrence relations, systems of distinct representatives, combinatorial designs, combinatorial algorithms and applications of combinatorics.

This course is designed primarily for Mathematical Sciences majors and those interested in the deeper mathematical issues underlying combinatorics.

Undergraduate credit may not be earned both for this course and for MA 3273.

Recommended background: MA 2071.

This course will be offered in 2013-14 and in alternating years thereafter.

MA 2431. MATHEMATICAL MODELING WITH ORDINARY DIFFERENTIAL EQUATIONS.

Cat. I

This course focuses on the theoretical foundations of ordinary equations while building models for physical and biological systems. Mathematical topics may include methods for solving systems of ordinary differential equations, existence and uniqueness theory, stability theory, phase-plane analysis and limit cycles. Examples will be chosen from electrical and mechanical oscillations, control theory, ecological models and reaction kinetics. Students will learn how to turn a real-life physical or biological problem into a mathematical one and to interpret the mathematical results.

This course is designed primarily for Mathematical Sciences majors and those interested in the deeper mathematical issues underlying mathematical modeling.

Undergraduate credit may not be earned both for this course and for MA 3431.

Recommended background: MA 1024, MA 2051 and MA 2071.

MA 2610. APPLIED STATISTICS FOR THE LIFE SCIENCES.

Cat. I

This course is designed to introduce the student to statistical methods and concepts commonly used in the life sciences. Emphasis will be on the practical aspects of statistical design and analysis with examples drawn exclusively from the life sciences, and students will collect and analyze data. Topics covered include analytic and graphical and numerical summary measures, probability models for sampling distributions, the central limit theorem, and one and two sample point and interval estimation, parametric and non-parametric hypothesis testing, principles of experimental design, comparisons of paired samples and categorical data analysis. Undergraduate credit may not be earned for both this course and for MA 2611.

Recommended background: MA 1022.

MA 2611. APPLIED STATISTICS I.

Cat. I

This course is designed to introduce the student to data analytic and applied statistical methods commonly used in industrial and scientific applications as well as in course and project work at WPI. Emphasis will be on the practical aspects of statistics with students analyzing real data sets on an interactive computer package.

Topics covered include analytic and graphical representation of data, exploratory data analysis, basic issues in the design and conduct of experimental and observational studies, the central limit theorem, one and two sample point and interval estimation and tests of hypotheses.

Recommended background: MA 1022.

MA 2612. APPLIED STATISTICS II.

Cat. I

This course is a continuation of MA 2611.

Topics covered include simple and multiple regression, one and two-way tables for categorical data, design and analysis of one factor experiments and distribution-free methods.

Recommended background: MA 2611.

MA 2621. PROBABILITY FOR APPLICATIONS.

Cat. I

This course is designed to introduce the student to probability.

Topics to be covered are: basic probability theory including Bayes theorem; discrete and continuous random variables; special distributions including the Bernoulli, Binomial, Geometric, Poisson, Uniform, Normal, Exponential, Chi-square, Gamma, Weibull, and Beta distributions; multivariate distributions; conditional and marginal distributions; independence; expectation; transformations of univariate random variables.

Recommended background: MA 1024.

MA 2631. PROBABILITY.

Cat. I

The purpose of this course is twofold:

- To introduce the student to probability. Topics to be covered will be chosen from: axiomatic development of probability; independence; Bayes theorem; discrete and continuous random variables; expectation; special distributions including the binomial and normal; moment generating functions; multivariate distributions; conditional and marginal distributions; independence of random variables; transformations of random variables; limit theorems.

- To introduce fundamental ideas and methods of mathematics using the study of probability as the vehicle. These ideas and methods may include systematic theorem-proof development starting with basic axioms; mathematical induction; set theory; applications of univariate and multivariate calculus.

This course is designed primarily for Mathematical Sciences majors and those interested in the deeper mathematical issues underlying probability theory.

Recommended background: MA 1024.

Undergraduate credit may not be earned both for this course and for MA 2621.

MA 3211. THEORY OF INTEREST.

Cat. I

An introduction to actuarial mathematics is provided for those who may be interested in the actuarial profession.

Topics usually included are: measurement of interest, including accumulated and present value factors; annuities certain; amortization schedules and sinking funds; and bonds.

Recommended background: MA 1024 and the ability to write computer programs.

MA 3212. LIFE CONTINGENCIES.

Cat. I

A continuation of a study of actuarial mathematics with emphasis on the theory and application of contingency mathematics in the areas of life insurance and annuities.

Topics usually included are: survival functions and life tables; life insurance; life annuities; net premiums; and premium reserves.

Recommended background: MA 3211 and either MA 2621 or MA 2631.

MA 3231. LINEAR PROGRAMMING.

Cat. I

This course considers the formulation of real-world optimization problems as linear programs, the most important algorithms for their solution, and techniques for their analysis.

Topics covered include: the primal and dual simplex algorithms, duality theory, parametric analysis, network flow models and, as time permits, bounded variable linear programs or interior methods.

Recommended background: MA 2071.

MA 3233. DISCRETE OPTIMIZATION.

Cat. II

Discrete optimization is a lively field of applied mathematics in which techniques from combinatorics, linear programming, and the theory of algorithms are used to solve optimization problems over discrete structures, such as networks or graphs.

The course will emphasize algorithmic solutions to general problems, their complexity, and their application to real-world problems drawn from such areas as VLSI design, telecommunications, airline crew scheduling, and product distribution.

Topics will be selected from: Network flow, optimal matching, integrality of polyhedra, matroids, and NP-completeness.

Undergraduate credit may not be earned both for this course and for MA 4233.

Recommended background: At least one of MA 2271, MA 2273 or MA 3231.

This course will be offered in 2014-15 and in alternating years thereafter.

MA 3257/CS 4032. NUMERICAL METHODS FOR LINEAR AND NONLINEAR SYSTEMS.

Cat. I

This course provides an introduction to modern computational methods for linear and nonlinear equations and systems and their applications.

Topics covered include: solution of nonlinear scalar equations, direct and iterative algorithms for the solution of systems of linear equations, solution of nonlinear systems, the eigenvalue problem for matrices. Error analysis will be emphasized throughout.

Recommended background: MA 2071. An ability to write computer programs in a scientific language is assumed.

MA 3457/CS 4033. NUMERICAL METHODS FOR CALCULUS AND DIFFERENTIAL EQUATIONS.

Cat. I

This course provides an introduction to modern computational methods for differential and integral calculus and differential equations.

Topics covered include: interpolation and polynomial approximation, approximation theory, numerical differentiation and integration, numerical solutions of ordinary differential equations. Error analysis will be emphasized throughout.

Recommended background: MA 2051. An ability to write computer programs in a scientific language is assumed. Undergraduate credit may not be earned for both this course and for MA 3255/CS 4031.

MA 3471. ADVANCED ORDINARY DIFFERENTIAL EQUATIONS.

Cat. II

The first part of the course will cover existence and uniqueness of solutions, continuous dependence of solutions on parameters and initial conditions, maximal interval of existence of solutions, Gronwall's inequality, linear systems and the variation of constants formula, Floquet theory, stability of linear and perturbed linear systems. The second part of the course will cover material selected by the instructor. Possible topics include: Introduction to dynamical systems, stability by Lyapunov's direct method, study of periodic solutions, singular perturbation theory and nonlinear oscillation theory.

Recommended background: MA 2431 and MA 3832.

This course will be offered in 2013-14 and in alternating years thereafter.

MA 3475. CALCULUS OF VARIATIONS.

Cat. II

This course covers the calculus of variations and select topics from optimal control theory. The purpose of the course is to expose students to mathematical concepts and techniques needed to handle various problems of design encountered in many fields, e. g. electrical engineering, structural mechanics and manufacturing.

Topics covered will include: derivation of the necessary conditions of a minimum for simple variational problems and problems with constraints, variational principles of mechanics and physics, direct methods of minimization of functions, Pontryagin's maximum principle in the theory of optimal control and elements of dynamic programming.

Recommended background: MA 2051.

This course will be offered in 2014-15 and in alternating years thereafter.

MA 3627. APPLIED STATISTICS III.

Cat. II

This course continues the exploration of statistics for scientific and industrial applications, begun in MA 2611 and MA 2612. Topics covered include the design and analysis of general factorial experiments, two-level factorial and fractional factorial experiments, Taguchi methods, response surface analysis, and statistical quality control.

Recommended background: MA 2612.

This course will be offered in 2013-14, and in alternating years thereafter.

MA 3631. MATHEMATICAL STATISTICS.

Cat. I

This course introduces students to the mathematical principles of statistics. Topics will be chosen from: Sampling distributions, limit theorems, point and interval estimation, sufficiency, completeness, efficiency, consistency; the Rao-Blackwell theorem and the Cramer-Rao bound; minimum variance unbiased estimators and maximum likelihood estimators; tests of hypotheses including the Neyman-Pearson lemma, uniformly most powerful and likelihood ratio tests.

Recommended background: MA 2631.

MA 3823. GROUP THEORY.

Cat. II

This course provides an introduction to one of the major areas of modern algebra. Topics covered include: groups, subgroups, permutation groups, normal subgroups, factor groups, homomorphisms, isomorphisms and the fundamental homomorphism theorem. Recommended background: MA 2073.

This course will be offered in 2014-15 and in alternating years thereafter.

MA 3825. RINGS AND FIELDS.

Cat. II

This course provides an introduction to one of the major areas of modern algebra. Topics covered include: rings, integral domains, ideals, quotient rings, ring homomorphisms, polynomial rings, polynomial factorization, extension fields and properties of finite fields. Recommended background: MA 2073.

This course will be offered in 2013-14 and in alternating years thereafter.

Undergraduate credit may not be earned both for this course and for MA 3821.

MA 3831. PRINCIPLES OF REAL ANALYSIS I.

Cat. I

Advanced Calculus is a two-part course giving a rigorous presentation of the important concepts of classical real analysis.

Topics covered in the two-course sequence include: basic set theory, elementary topology of Euclidean spaces, limits and continuity, differentiation Riemann-Stieltjes integration, infinite series, sequences of functions, and topics in multivariate calculus.

Recommended background: MA 2051 and MA 2071.

MA 3832. PRINCIPLES OF REAL ANALYSIS II.
Cat. I

MA 3832 is a continuation of MA 3831.

For the contents of this course, see the description given for MA 3831.

Recommended background: MA 3831.

MA 4213. RISK THEORY.
Cat. II

This course covers topics in risk theory as it is applied, under specified assumptions, to insurance.

Topics covered include: economics of insurance, short term individual risk models, single period and extended period collective risk models, and applications.

Recommended background: MA 2631.

This course will be offered in 2013-14 and in alternating years thereafter.

MA 4214. SURVIVAL MODELS.
Cat. II

Survival models are statistical models of times to occurrence of some event. They are widely used in areas such as the life sciences and actuarial science (where they model such events as time to death, or to the development or recurrence of a disease), and engineering (where they model the reliability or useful life of products or processes). This course introduces the nature and properties of survival models, and considers techniques for estimation and testing of such models using realistic data.

Topics covered will be chosen from: parametric and nonparametric survival models, censoring and truncation, nonparametric estimation (including confidence intervals and hypothesis testing) using right-, left-, and otherwise censored or truncated data.

Recommended background: MA 3631.

This course will be offered in 2014-15, and in alternating years thereafter.

MA 4235. MATHEMATICAL OPTIMIZATION.
Cat. II

This course explores theoretical conditions for the existence of solutions and effective computational procedures to find these solutions for optimization problems involving nonlinear functions.

Topics covered include: classical optimization techniques, Lagrange multipliers and Kuhn-Tucker theory, duality in nonlinear programming, and algorithms for constrained and unconstrained problems.

Recommended background: Vector calculus at the level of MA 2251.

This course will be offered in 2013-14 and in alternating years thereafter.

MA 4237. PROBABILISTIC METHODS IN OPERATIONS RESEARCH.
Cat. II

This course develops probabilistic methods useful to planners and decision makers in such areas as strategic planning, service facilities design, and failure of complex systems.

Topics covered include: decisions theory, inventory theory, queuing theory, reliability theory, and simulation.

Recommended background: Probability theory at the level of MA 2621 or MA 2631.

This course will be offered in 2013-14 and in alternating years thereafter.

MA 4291. APPLICABLE COMPLEX VARIABLES.
Cat. I

This course provides an introduction to the ideas and techniques of complex analysis that are frequently used by scientists and engineers. The presentation will follow a middle ground between rigor and intuition.

Topics covered include: complex numbers, analytic functions, Taylor and Laurent expansions, Cauchy integral theorem, residue theory, and conformal mappings.

Recommended background: MA 1024 and MA 2051.

MA 4411. NUMERICAL ANALYSIS OF DIFFERENTIAL EQUATIONS.
Cat. II

This course is concerned with the development and analysis of numerical methods for differential equations.

Topics covered include: well-posedness of initial value problems, analysis of Euler's method, local and global truncation error, Runge-Kutta methods, higher order equations and systems of equations, convergence and stability analysis of one-step methods, multistep methods, methods for stiff differential equations and absolute stability, introduction to methods for partial differential equations.

Recommended background: MA 2071 and MA 3457/CS 4033. An ability to write computer programs in a scientific language is assumed.

This course will be offered in 2014-15, and in alternating years thereafter.

MA 4451. BOUNDARY VALUE PROBLEMS.
Cat. I

Science and engineering majors often encounter partial differential equations in the study of heat flow, vibrations, electric circuits and similar areas. Solution techniques for these types of problems will be emphasized in this course.

Topics covered include: derivation of partial differential equations as models of prototype problems in the areas mentioned above, Fourier Series, solution of linear partial differential equations by separation of variables, Fourier integrals and a study of Bessel functions.

Recommended background: MA 1024 or and MA 2051.

MA 4473. PARTIAL DIFFERENTIAL EQUATIONS.
Cat. II

The first part of the course will cover the following topics: classification of partial differential equations, solving single first order equations by the method of characteristics, solutions of Laplace's and Poisson's equations including the construction of Green's function, solutions of the heat equation including the construction of the fundamental solution, maximum principles for elliptic and parabolic equations. For the second part of the course, the instructor may choose to expand on any one of the above topics.

Recommended background: MA 2251 and MA 3832.

This course will be offered in 2014-15 and in alternating years thereafter.

MA 4603/BCB 4004. STATISTICAL METHODS IN GENETICS AND BIOINFORMATICS.
Cat. II

This course provides students with knowledge and understanding of the applications of statistics in modern genetics and bioinformatics. The course generally covers population genetics, genetic epidemiology, and statistical models in bioinformatics. Specific topics include meiosis modeling, stochastic models for recombination, linkage and association studies (parametric vs. nonparametric models, family-based vs. population-based models) for mapping genes of qualitative and quantitative traits, gene expression data analysis, DNA and protein sequence analysis, and molecular evolution. Statistical approaches include log-likelihood ratio tests, score tests, generalized linear models, EM algorithm, Markov chain Monte Carlo, hidden Markov model, and classification and regression trees.

Recommended background: MA 2612, MA 2631 (or MA 2621), and BB 2920.

This course is being offered in 2013-14 and in alternating years thereafter.

MA 4631. PROBABILITY AND MATHEMATICAL STATISTICS I.
Cat. I (14 week course)

Intended for advanced undergraduates and beginning graduate students in the mathematical sciences and for others intending to pursue the mathematical study of probability and statistics, this course begins by covering the material of MA 3613 at a more advanced level. Additional topics covered are: one-to-one and many-to-one transformations of random variables; sampling distributions; order statistics, limit theorems.

Recommended background: MA 2631 or MA 3613, MA 3831, MA 3832.

MA 4632. PROBABILITY AND MATHEMATICAL STATISTICS II.
Cat. I (14 week course)

This course is designed to complement MA 4631 and provide background in principles of statistics.

Topics covered include: point and interval estimation; sufficiency, completeness, efficiency, consistency; the Rao-Blackwell theorem and the Cramer-Rao bound; minimum variance unbiased estimators, maximum likelihood estimators and Bayes estimators; tests of hypothesis including uniformly most powerful, likelihood ratio, minimax and bayesian tests.

Recommended background: MA 3631 or MA 4631.

MA 4891. TOPICS IN MATHEMATICS.
Cat. I

MECHANICAL ENGINEERING

The second digit in mechanical engineering course numbers is coded as follows:

- 0 — General mechanical engineering
- 1 —
- 2 —
- 3 — Design
- 4 — Thermal—fluids
- 5 — Engineering mechanics
- 6 — Fluid mechanics—hydraulics
- 7 — Aerospace
- 8 — Materials
- 9 — Engineering experimentation

ME 1520. THE TECHNOLOGY OF ALPINE SKIING.

Cat. II

This course explores science and engineering issues associated with equipment and technique for alpine skiing, particularly racing. A diverse group of technical subjects related to engineering mechanics are discussed: tribology, beams, rigid body motion, material science, machining and biomechanics. Specifically we will examine: ski-snow interactions, technique for gliding, turning and stepping, selection of line in racing; equipment design, testing and performance; and ski injuries. We will also address issues in the epidemiology of skiing injuries, the calculation of the cost of ski injuries to society, the impact of ski equipment technology on litigation and the impact of litigation on equipment and trail design.

This course will be offered in 2014-15 and in alternating years thereafter.

ME 1800. MANUFACTURING SCIENCE, PROTOTYPING, AND COMPUTER-CONTROLLED MACHINING.

Cat. I

This course introduces students to manufacturing science and engineering and prototype part production. It emphasizes CNC (computer-controlled) machining. Students will learn how to go from a solid (CAD, computer-aided design) model to a machined part, using CAM software (computer-aided manufacturing) and CNC machining. They will also be exposed to associated issues in manufacturing process analysis, engineering design, material science, and in dimensional and surface metrology. Using machining as an example, the science of manufacturing processes is developed in a combination of class work and laboratory experience. The laboratory experience includes an experimental component that relates process variables in machining with performance and machined part quality. Students whose project work will necessitate fabrication of parts and those who want a background in manufacturing process science and engineering should take this course.

ME 2300. INTRODUCTION TO ENGINEERING DESIGN.

Cat. I

Real world engineering design problems usually have more than one correct solution. This course utilizes a realistic design process to introduce students to the methods and techniques for solving engineering problems. Lectures will support the design projects and may cover engineering economics, fluid dynamics, heat transfer, mechanics, statistics, and basic circuits. No prior knowledge of fluids, heat transfer, economics, statistics or electrical circuits is required. Laboratory sessions will be used to build, test and demonstrate various designs.

This course is designed for sophomores and juniors to provide a broad overview of engineering design.

The course includes a significant writing component and makes extensive use of PCs for word processing, spread sheet calculations and programming.

Recommended background: Ordinary Differential Equations (MA 2051), mechanics (PH 1110), statics (ES 2501), any programming language.

ME/AE 2713. ASTRONAUTICS.

Cat. I

An introductory course that covers the fundamentals of space flight, spacecraft trajectory analysis and mission design. Topics studied: orbital mechanics; geocentric orbits and trajectories; interplanetary transfers; ambient space environments for geocentric orbits and interplanetary transfers; introduction to spacecraft and mission design.

Recommended background: dynamics (ES 2503, PH 2201 or equivalent).

ME 2820. MATERIALS PROCESSING.

Cat. I

An introduction to material processing in manufacturing. This course provides important background for anyone interested in manufacturing, design engineering design, sales, or management.

Processing of polymers, ceramics, metals and composites is discussed. Processes covered include: rolling, injection molding, forging, powder metallurgy, joining and machining. The relationships between materials, processes, processing parameters and the properties of manufactured parts are developed. During the course the students should develop the ability to choose materials, processes, and processing parameters for designing manufacturing procedures to take a prototype part to production.

Recommended background: ME 1800 Materials Selection and Manufacturing Processes, and ES 2001 Introduction to Materials Science.

ME 3310. KINEMATICS OF MECHANISMS.

Cat. I

An introduction to the synthesis and analysis of linkages, cams and gear trains is presented. The design process is introduced and used to solve unstructured design problems in linkage and cam design. Algebraic and graphical techniques to analyze the displacement, velocity and acceleration of linkages and cams are developed. Computer programs for the design and analysis of linkages are used by students. Results of student design projects are presented in professional engineering reports.

Recommended background: Ordinary Differential Equations (MA 2051), statics (ES 2501), dynamics (ES 2503).

ME 3311. DYNAMICS OF MECHANISMS AND MACHINES.

Cat. I

This course provides an in-depth study of forces in dynamic systems. Dynamic force analysis is developed using matrix methods. Computer programs are used to solve the sets of simultaneous equations derived by students for realistic, unstructured design problems. Inertial and shaking forces, elementary mechanical vibrations, torque-time functions, rotational and reciprocating balance and cam dynamics are covered using the internal combustion engine as a design example. Students execute unstructured design projects and prepare professional engineering reports on the results. Computers are used extensively to solve the dynamic equations.

Recommended background: Ordinary Differential Equations (MA 2051), statics (ES 2501), dynamics (ES 2503), kinematics (ME 3310), linear algebra.

This course will be offered in 2014-15 and in alternating years thereafter.

ME 3320. DESIGN OF MACHINE ELEMENTS.

Cat. I

This is an introductory course in mechanical design analysis, and it examines stress and fatigue in many machine elements. Common machine elements are studied and methods of selection and design are related to the associated hardware.

Topics covered include: combined stresses, fatigue analysis, design of shafts, springs, gears, bearings and miscellaneous machine elements.

Recommended background: mechanics (ES 2501, ES 2502, ES 2503), materials (ME 1800, ME 2820), computer programming (CS 1101 or CS 1102).

ME/AE 3410. COMPRESSIBLE FLUID DYNAMICS.

Cat. I

In this course, students are introduced to various compressibility phenomena such as compression (shock) and expansion waves. Conservation laws and thermodynamic principles are applied to the description of flows in which compressibility effects are significant. One-dimensional models are applied to analysis of flow in variable area ducts, normal and oblique shock waves, expansion waves, and flows with friction and heat addition. Numerous applications from engineering are investigated including supersonic inlets, rocket nozzles, supersonic wind tunnels, gas delivery systems, and afterburning jet engines.

Recommended background: thermodynamics (ES 3001, CH 3510 or equivalent), fluid dynamics (ES 3004 or equivalent).

ME 3501. ELEMENTARY CONTINUUM MECHANICS.

Cat. II

In typical mathematics courses, students learn principles and techniques by solving many short and specially prepared problems. They rarely gain experience in formulating and solving mathematical equations that apply to real life engineering problems. This course will give students this type of applied mathematical experience.

The course emphasizes the application of basic laws of nature as they apply to differential elements which lead to differential equations that need to be solved; all of these ideas are used in higher level engineering science courses such as fluid mechanics, heat transfer, elasticity, etc. Emphasis will be placed on understanding the physical concepts in a problem, selecting appropriate differential elements, developing differential equations, and finding ways to solve these equations. Limitations on the mathematical solutions due to assumptions made will be considered.

Recommended background: Ordinary Differential Equations (MA 2051), statics (ES 2501), dynamics (ES 2503).

This course will be offered in 2014-15 and in alternating years thereafter.

ME 3506. REHABILITATION ENGINEERING.

Cat. I

The course exposes the students to the use of technology to design devices to ameliorate the handicaps of individuals with disabilities. This course focuses on the design process for assistive devices including defining the problem, setting design criteria, developing preliminary designs, selecting, analyzing and testing a final design. Human factors are integrated into all phases of the design process.

Topics include: ergonomics, physical and cognitive parameters that effect the user interface, safety, economics, reliability and esthetics. Design and analysis of devices used for mobility and in daily activities in residential, educational and vocational settings. Laboratory sessions will be used to develop conceptual designs that solve real problems.

Recommended background: mechanics (ES 2501, ES 2502, ES 2503), kinematics (ME 3310), design (ME 2300), materials (ME 1800, ME 2820), electrical engineering (ECE 2010).

ME/AE 3602. INCOMPRESSIBLE FLUIDS.

Cat. I

This course covers inviscid and viscous incompressible fluid dynamics at an intermediate level. Topics include: fluid kinematics and deformation; integral conservation laws of mass, momentum and energy for finite systems and control volumes; differential conservation laws of mass, momentum and energy; the Navier-Stokes equations and solution methods; the incompressible Euler equations and Bernoulli's equation; the streamfunction and the velocity potential; incompressible, inviscid, irrotational flow theory and solution methodology; elementary potential flows, the superposition principle and its applications to flows over solid bodies; two-dimensional incompressible, viscous boundary layer, Prandtl's theory, the Blasius solution and its application; other analytical solutions for two-dimensional viscous and inviscid incompressible channel flows.

Recommended background: thermodynamics (ES 3001, CH 3510 or equivalent), fluid dynamics (ES 3004 or equivalent).

ME/AE 3703. INTRODUCTION TO CONTROL OF DYNAMICAL SYSTEMS.

Cat. I

The course introduces the mathematical modeling and control of dynamical systems found in aerospace and mechanical engineering applications.

Topics include: introduction to feedback control analysis and synthesis of linear dynamic systems; transient response analysis of first and second order systems (thermal, pneumatic, hydraulic, and mechanical); introduction to state-space modeling and representation of control systems; linearization of nonlinear systems; stability analysis using Routh's criterion and Lyapunov methods; system analysis using frequency response methods; introduction to the design of controllers in time and frequency domain. The analysis and design will be accomplished with Matlab/Simulink® software.

Recommended background: ordinary differential equations (MA 2051 or equivalent), dynamics (ES2503, PH 2201, PH2202 or equivalent), fluid dynamics (ES3004, ME3602 or equivalent), electricity and magnetism (PH 1120 or PH 1121 or equivalent)

ME/AE 3711. AERODYNAMICS.

Cat. I

This course introduces students to the aerodynamics of airfoils, wings, and aircraft in the subsonic and supersonic regimes. Topics covered include: prediction of aerodynamic forces (lift, drag) and moments, dynamic similarity, experimental techniques in aerodynamics, Kutta-Joukowski theorem, circulation, thin airfoil theory, panel methods, finite wing theory, subsonic compressible flow over airfoils, linearized supersonic flow, and viscous flow over airfoils.

Recommended background: incompressible fluid dynamics (ME 3602 or equivalent).

ME/AE 3712. AEROSPACE STRUCTURES.

Cat. I

This is a course in solid mechanics that covers stress analysis of aerospace structures. It begins with an overview of stress, strain, three-dimensional elasticity theory, and stress-strain relations for anisotropic materials. Applied topics include general torsion of solid noncircular cross sections, torsion of thin walled multi-celled members, bidirectional bending of unsymmetric cross sections, flexural shear flow in and shear center of thin walled multi-celled members, and buckling and stability of columns.

Recommended background: Stress Analysis (ES 2502 or equivalent.)

ME 3820. COMPUTER-AIDED MANUFACTURING.

Cat. I

This introductory course in modern control systems will give students an understanding of the basic techniques, and the range of equipment used in most computer controlled manufacturing operations. The class work is reinforced by hands-on laboratories in the Robotics/CAM lab. Modeling and analysis of machining processes, and applications of PLC (programmable logic control) are included.

Class topics include: Manufacturing Automation, Microcomputers for Process Monitoring and Control, Computer Numerical Control, Switching Theory and Ladder Logic, Transducers and Signal Conditioning, and Closed Loop Digital Control. The laboratories allow students to program and implement several types of the controllers, and will provide an introduction to the topic of industrial robotics.

Recommended background: manufacturing (ME 1800), materials processing (ME 2820), elementary computer/logic device programming.

ME 3901. ENGINEERING EXPERIMENTATION.

Cat. I

A course designed to develop analytical and experimental skills in modern engineering measurement methods, based on electronic instrumentation and computer-based data acquisition systems. The lectures are concerned with the engineering analysis and design as well as the principles of instrumentation, whereas the laboratory periods afford the student an opportunity to use modern devices in actual experiments.

Lecture topics include: review of engineering fundamentals and, among others, discussions of standards, measurement and sensing devices, experiment planning, data acquisition, analysis of experimental data, and report writing.

Laboratory experiments address both mechanical and thermal systems and instrumentation in either traditional mechanical engineering (heat transfer, flow measurement/visualization, force/torque/strain measurement, motion/vibration measurement) or materials engineering (temperature and pressure measurements in materials processing, measurement of strain and position in mechanical testing of materials). Each year students will be notified which type of experiments will be used in each term offering. Students may also consult with their academic advisor or the Mechanical Engineering department office.

Recommended background: mathematics (MA 2051), thermo-fluids (ES 3001, ES 3003, ES 3004), mechanics (ES 2501, ES 2502, ES 2503), materials (ES 2001).

ME 4320. ADVANCED ENGINEERING DESIGN.

Cat. I

This course integrates students' background in ME in a one-term design project that is usually taken from a local company. Students must organize themselves and the project to successfully realize a product that meets customer needs. Activities include problem definition, design analysis, mathematical modelling, CAD modelling, manufacturing, testing, liaison to vendors, customer relations, marketing, technical management, purchasing, report writing, and oral presentations.

Recommended background: mechanisms (ME 3310, ME 3311), stress analysis (ES 3502), design (ME 3320), thermo-fluids (ES 3001, ES 3003, ES 3004), materials (ES 2001), manufacturing (ME 1800).

ME/RBE 4322. MODELING AND ANALYSIS OF MECHATRONIC SYSTEMS.

Cat. I

This course introduces students to the modeling and analysis of mechatronic systems. Creation of dynamic models and analysis of model response using the bond graph modeling language are emphasized. Lecture topics include energy storage and dissipation elements, transducers, transformers, formulation of equations for dynamic systems, time response of linear systems, and system control through open and closed feedback loops. Computers are used extensively for system modeling, analysis, and control. Hands-on projects will include the

reverse engineering and modeling of various physical systems. Physical models may sometimes also be built and tested.

Recommended background: mathematics (MA 2051, MA 2071), fluids (ES 3004), thermodynamics (ES 3001), mechanics (ES 2501, ES 2503)

ME 4429. THERMOFLUID APPLICATION AND DESIGN.

Cat. I

This course integrates thermodynamics, fluid mechanics and heat transfer through the use of design projects involving modern technologies, such as electronic cooling, vapor compression power cycles, and turbines. Activities include problem definition, design creation and analysis, mathematical modeling, cost analysis and optimization.

Recommended background: thermo fluids (ES 3001, ES 3003, ES 3004) and an introduction to design.

ME 4430. INTEGRATED THERMOMECHANICAL DESIGN AND ANALYSIS.

Cat. II

Current state-of-the-art computer based methodologies used in the design and analysis of thermomechanical systems will be presented and illustrated by selected laboratory demonstrations, and used in projects. Projects will include thermal, mechanical, electronic, and photonic loads of steady state and dynamic nature and will integrate design, analysis, and testing. Students will prepare a technical report and present their results. Topics will include, but not be limited to, thermomechanics of fiber optic telecommunication cables, high-energy beam interactions with materials, shape memory alloys, microelectronics, MEMS and mechatronics.

Recommended background: MA 2051, ES 2001, ES 2502, ES 3003, ME 3901, and an introduction to design.

This course will be offered in 2014-15 and in alternating years thereafter.

ME/BME 4504. BIOMECHANICS.

Cat. II

This course emphasizes the applications of mechanics to describe the material properties of living tissues. It is concerned with the description and measurements of these properties as related to their physiological functions. Emphasis on the interrelationship between biomechanics and physiology in medicine, surgery, body injury and prostheses.

Topics covered include: review of basic mechanics, stress, strain, constitutive equations and the field equations, viscoelastic behavior, and models of material behavior. The measurement and characterization of properties of tendons, skin, muscles and bone. Biomechanics as related to body injury and the design of prosthetic devices.

Recommended background: mechanics (ES 2501, ES 2502, ES 2503, ME 3501), mathematics (MA 2051).

This course will be offered in 2013-14 and in alternating years thereafter.

ME 4505. ADVANCED DYNAMICS.

Cat. II

This course completes a sequence of sophomore, junior and senior courses in Dynamic Systems, i.e., ES 2503, ME 3505, and ME 4505, which are essential in an undergraduate Mechanical Engineering curriculum. An advanced course intended to emphasize the development and applications of dynamics in three-dimensional space. Problem solutions emphasize the use of vector algebra, matrix methods and differential equations with a goal of developing the student's ability to translate physical problems into mathematical models.

Topics covered include: three-dimensional kinematics using rotating and stationary frames of reference, development of force, energy and momentum equations governing general particle and rigid body systems. Applications of equations to rigid, elastic, and fluid problems.

Recommended background: dynamics (ES 2503).

This course will be offered in 2014-15 and in alternating years thereafter.

ME 4506. MECHANICAL VIBRATIONS.

Cat. I

This course is an introduction to the fundamental concepts of mechanical vibrations, which are important for design and analysis of mechanical and structural systems subjected to time-varying loads. The objective of the course is to expose the students to mathematical modeling and analysis of such systems

Topics covered include: formulation of the equations of motion using Newton's Laws, D'Alembert's Principle and energy methods; prediction of natural frequency for single-degree-of-freedom systems; modeling stiffness characteristics, damping and other vibrational properties of mechanical systems; basic solution techniques by frequency response analysis and convolution integral methods. Examples may include analysis and design for transient passage through resonance; analysis and design of vibration measurement

devices; introductory rotordynamics. The course is mainly focused on analysis of single-degree-of-freedom systems, however a basic introduction into multidegree-of-freedom systems is also presented. Computer-based project may be suggested.

Recommended background: Ordinary Differential Equations (MA 2501), Statics (ES 2501), Dynamics (ES 2503).

ME 4512. INTRODUCTION TO THE FINITE ELEMENT METHOD.

Cat. I

This course serves as an introduction to finite element analysis (FEA) for stress analysis problems. Finite element equations are developed for several element types from stiffness and energy approaches and used to solve simple problems. Element types considered include spring, truss, beam, two-dimensional (plane stress/strain and axisymmetric solid), three-dimensional and plates. Stress concentrations, static failures, and fatigue failures are considered for each element type. Emphasis will be placed on knowing the behavior and usage of each element type, being able to select a suitable finite element model for a given problem, and being able to interpret and evaluate the solution quality. A commercial, general-purpose finite element computer program is used to solve problems that are more complex. Projects are used to introduce the use of FEA in the iterative design process.

Recommended background: Mathematics (MA 2051, MA 2071), Mechanics (ES2501 & ES 2502 or CE2000 & CE2001).

ME/BME 4606. BIOFLUIDS.

Cat. II

This course emphasizes the applications of fluid mechanics to biological problems. The course concentrates primarily on the human circulatory and respiratory systems. Topics covered include: blood flow in the heart, arteries, veins and microcirculation and air flow in the lungs and airways. Mass transfer across the walls of these systems is also presented.

Recommended background: continuum mechanics (ME 3501), fluids (ES 3004).

This course will be offered in 2014-15 and in alternating years thereafter.

ME/AE 4710. GAS TURBINES FOR PROPULSION AND POWER GENERATION.

Cat. I

This course provides a study of open-cycle and closed-cycle gas turbines. Topics covered include: thermodynamic cycles and fluid dynamics of airbreathing gas turbines (turbojets, turbofans, turboprops), ramjets, and scramjets; thermodynamic cycles and fluid dynamics of closed-cycle gas turbines. Performance of specific engine components such as inlets, combustors, nozzles, as well as axial compressors and turbines will be addressed.

Recommended background: compressible fluid dynamics (ME 3410 or equivalent).

ME/AE 4713. SPACECRAFT DYNAMICS AND CONTROL.

Cat. I

The course covers broad topics in spacecraft attitude dynamics, stability and control. The course includes a review of particle and two-body dynamics and introduction to rigid body dynamics. Orbital and attitude maneuvers are presented. Attitude control devices and momentum exchange techniques such as spinners, dual spinners, gravity gradient, and geomagnetic torques are presented. Attitude sensors/actuators are presented and the attitude control problem is introduced. Gyroscopic instruments are introduced and demonstrated in the laboratory. Open-loop stability analysis for a variety of equilibrium conditions is discussed. Control using momentum exchange and mass expulsion (thrusters) devices is discussed.

Recommended background: astronautics (ME 2713 or equivalent), dynamics (ES 2503, PH 2201 or equivalent).

ME/AE 4718. ADVANCED MATERIALS WITH AEROSPACE APPLICATIONS.

Cat. I

This course covers topics on the design, fabrication and behavior of advanced materials used in structural and propulsion components of aerospace vehicles. The design, fabrication, and properties of polymer, metal and ceramic matrix composites used in aerospace structures are presented. The fabrication and behavior of aluminum and titanium alloys used in propulsion components as well as the processing and performance of Nickel-based superalloys are also presented. The fundamentals of coatings for high temperature oxidation, hot corrosion, and thermal protection are introduced.

Recommended background: Introduction to Materials Science (ES 2001), Stress Analysis (ES 2502) or equivalent.

ME/AE 4719. ROCKET PROPULSION.*Cat. I*

This course provides a study of rocket propulsion systems for launch vehicles and spacecraft. Dynamics, performance and optimization of rocket-propelled vehicles are presented. Performance and component analysis of chemical and electric propulsion systems are covered including thermochemistry of bipropellant and monopropellant thrusters. Additional topics may include advanced propulsion concepts and propellant storage and feed systems.

Recommended background: compressible fluid dynamics (ME 3410 or equivalent).

ME/AE 4723. AIRCRAFT DYNAMICS AND CONTROL.*Cat. I*

The goal of this course is for students to develop, analyze, and utilize models of aircraft dynamics, and to study various aircraft control systems. Topics include: review of linear systems, longitudinal and lateral flight dynamics, simulation methodologies, natural modes of motion, static and dynamic aircraft stability, and aircraft control systems (such as autopilot design, flight path control, and automatic landing). Other topics may include: vertical take-off and landing (VTOL) vehicles and rotorcraft.

Recommended background: dynamics (ES2503, PH 2201 or equivalent).

ME/AE 4733. GUIDANCE, NAVIGATION AND COMMUNICATION.*Cat. I*

This course broadly covers methods and current enabling technologies in the analysis, synthesis and practice of aerospace guidance, navigation, and communication and information systems. Topics covered include: position fixing and celestial navigation with redundant measurements, recursive navigation, and Kalman filtering; inertial navigation systems, global position systems, and Doppler navigation; orbit determination; atmospheric re-entry; communication architectures, data rates, and communication link design; tropospheric and ionospheric effects on radio-wave propagation; pursuit guidance and ballistic flight.

Recommended background: Controls (ME 3703, ES 3011 or equivalent).

ME/AE 4770. AIRCRAFT DESIGN.*Cat. I*

This course introduces students to design of aircraft systems. Students complete a conceptual design of an aircraft in a term-long project. Students are exposed to the aircraft design process, and must establish design specifications, develop and analyze alternative designs, and optimize their designs to meet mission requirements. Students work together in teams to apply material learned in the areas of aerodynamics, structures and materials, propulsion, stability and control, and flight mechanics and maneuvers to the preliminary design of an aircraft. The project requirements are selected to reflect real-life aircraft mission requirements, and teams are required to design systems which incorporate appropriate engineering standards and multiple realistic constraints. The teams present their design in a final report and oral presentation.

Recommended background: fluid dynamics (ME 3410, ME 3602 or equivalent), subsonic aerodynamics (ME 3711 or equivalent), aerospace structures (ME 3712 or equivalent), airbreathing propulsion (ME 4710 or equivalent), aircraft dynamics and control (ME 4723 or equivalent).

ME/AE 4771. SPACECRAFT AND MISSION DESIGN.*Cat. I*

This course introduces students to design of spacecraft and missions. Students are introduced to the process of designing a spacecraft and major subsystems to meet a specific set of objectives or needs. In addition, students will learn about different spacecraft subsystems and what factors drive their design. Particular emphasis is given to propulsion, power, attitude control, structural and thermal control subsystems. Students work together in teams to apply material learned in the areas of orbital mechanics, space environments, attitude determination and control, space structures, and propulsion to the preliminary design of a spacecraft and mission. The project requirements are selected to reflect real-life missions, and teams are required to design systems which incorporate appropriate engineering standards and multiple realistic constraints. The teams present their design in a final report and oral presentation.

Recommended background: astronautics (ME 2713 or equivalent), rocket propulsion (ME 4719 or equivalent), spacecraft dynamics and control (ME 4713 or equivalent).

ME 4810. AUTOMOTIVE MATERIALS AND PROCESS DESIGN.*Cat. II*

This course focuses on materials used in the automotive industry. Students complete a term-long project that integrates design, materials selection and processing considerations. Activities include: problem definition, development of design specifications, development and analysis of alternative designs, conceptual designs and materials and process selection. Students will consider cost, and environmental impact of alternative material choices. Students will present their results in intermediate and final design reviews.

Recommended background: materials science (ES 2001), stress analysis (ES 2502), or equivalent.

This course will be offered in 2014-15 and in alternating years thereafter.

ME 4813. CERAMICS AND GLASSES FOR ENGINEERING APPLICATIONS.*Cat. II*

This course develops an understanding of the processing, structure, property, performance relationships in crystalline and vitreous ceramics. The topics covered include crystal structure, glassy structure, phase diagrams, microstructures, mechanical properties, optical properties, thermal properties, and materials selection for ceramic materials. In addition the methods for processing ceramics for a variety of products will be included.

Recommended Background: ES 2001 or equivalent.

This course will be offered in 2014-15 and in alternating years thereafter.

ME/BME 4814. BIOMATERIALS.*Cat. I*

A course specializing in material selection and special problems associated with biomedical engineering.

Topics covered include: fundamentals of metals, plastics, and ceramics and how they can be applied to biomedical applications. Case histories of successful and unsuccessful material selections. Current literature is the primary source of material.

Recommended background: materials (ES 2001).

ME/RBE 4815. INDUSTRIAL ROBOTICS.*Cat. I*

This course introduces students to robotics within manufacturing systems. Topics include: classification of robots, robot kinematics, motion generation and transmission, end effectors, motion accuracy, sensors, robot control and automation. This course is a combination of lecture, laboratory and project work, and utilizes industrial robots. Through the laboratory work, students will become familiar with robotic programming (using a robotic programming language VAL II) and the robotic teaching mode. The experimental component of the laboratory exercise measures the motion and positioning capabilities of robots as a function of several robotic variables and levels, and it includes the use of experimental design techniques and analysis of variance.

Recommended background: manufacturing (ME 1800), kinematics (ME 3310), control (ES 3011), and computer programming.

ME 4821. PLASTICS.*Cat. II*

This course develops the processing, structure, property, performance relationships in plastic materials. The topics covered include polymerization processes, chain structure and configuration, molecular weights and distributions, amorphous and crystalline states and glass-rubber transition. The principles of various processing techniques including injection molding, extrusion, blow molding, thermoforming and calendaring will be discussed. The physical and mechanical properties of polymers and polymer melts will be described with specific attention to rheology and viscoelasticity. Pertinent issues related to environmental degradation and recyclability will be highlighted.

Recommended Background: ES2001 or equivalent.

This course will be offered in 2013-14 and in alternating years thereafter.

ME 4832. CORROSION AND CORROSION CONTROL.*Cat. II*

An introductory course designed to acquaint the student with the different forms of corrosion and the fundamentals of oxidation and electro-chemical corrosion.

Topics covered include: corrosion principles, environmental effects, metallurgical aspects, galvanic corrosion, crevice corrosion, pitting, intergranular corrosion, erosion corrosion, stress corrosion, cracking and hydrogen embrittlement, corrosion testing, corrosion prevention, oxidation and other high-temperature metal-gas reactions.

Recommended background: materials (ES 2001).

This course will be offered in 2013-14 and in alternating years thereafter.

ME 4840. PHYSICAL METALLURGY.*Cat. I*

Fundamental relationships between the structure and properties of engineering materials are studied. Principles of diffusion and phase transformation are applied to the strengthening of commercial alloy systems. Role of crystal lattice defects on material properties and fracture are presented.

Strongly recommended as a senior-graduate level course for students interested in pursuing a graduate program in materials or materials engineering at WPI, or other schools.

Recommended background: materials (ES 2001, ME 2820).

ME 4860. FOOD ENGINEERING.*Cat. II*

An introductory course on the structure, processing, and properties of food.

Topics covered include: food structure and rheology, plant and animal tissues, texture, glass transition, gels, emulsions, micelles, food additives, food coloring, starches, baked goods, mechanical properties, elasticity, viscoelastic nature of food products, characteristics of food powders, fat eutectics, freezing and cooking of food, manufacturing processes, cereal processing, chocolate manufacture, microbial growth, fermentation, transport phenomena in food processing, kinetics, preserving and packaging of food, testing of food.

Recommended Background: ES2001 or equivalent.

This course will be offered in 2014-15 and in alternating years thereafter.

ME 4875/MTE575. INTRODUCTION TO NANOMATERIALS AND NANOTECHNOLOGY.*Cat. I*

This course introduces students to current developments in nanoscale science and technology. The current advance of materials and devices constituting of building blocks of metals, semiconductors, ceramics or polymers that are nanometer size (1-100 nm) are reviewed. The profound implications for technology and science of this research field are discussed. The differences of the properties of matter on the nanometer scale from those on the macroscopic scale due to the size confinement, predominance of interfacial phenomena and quantum mechanics are studied. The main issues and techniques relevant to science and technologies on the nanometer scale are considered. New developments in this field and future perspectives are presented. Topics covered include: fabrication of nanoscale structures, characterization at nanoscale, molecular electronics, nanoscale mechanics, new architecture, nano-optics and societal impacts.

Recommended background: ES 2001 Introduction to Materials or equivalent

IS/P. SPECIAL TOPICS.*Cat. I*

For students who wish to pursue in depth various mechanical engineering topics.

Topics covered include: theoretical or experimental studies in subjects of interest to mechanical engineers.

Registration as a junior or senior is assumed.

MILITARY SCIENCE

ML 1011. FOUNDATIONS OF OFFICERSHIP I.*Cat. I (0 units w/grade)*

Introduction to issues and competencies that are central to a commissioned officer's responsibilities. Establishes a framework for understanding officership, leadership, and Army values. Additionally, the semester addresses "life skills" including fitness and time management. Participation in weekly training leadership laboratories; off campus training sessions (field training exercises) and other special events is required.

ML 1012. FOUNDATIONS OF OFFICERSHIP II.*Cat. I (1/9 unit after completion of 1011 and 1012)*

This course continues the studies begun in ML 1011. Students make oral presentations on the elements of leadership, enhancing effective communication. Students begin to develop leadership potential by instilling self-confidence and fostering teamwork through basic survival techniques (e.g., water survival). Participation in weekly training leadership laboratories; off campus training sessions (field training exercises) and other special events is required.

ML 1021. BASIC LEADERSHIP I.*Cat. I (0 units w/grade)*

ML 1021 expands upon the fundamentals introduced in the previous term by focusing on communications, leadership, and problem solving. "Life skills" lessons in this semester include: problem solving, goal setting, interpersonal communication skills, and assertiveness skills. Participation in weekly training

leadership laboratories; off campus training sessions (field training exercises) and other special events is required.

ML 1022. BASIC LEADERSHIP II.*Cat. I (1/9 unit after completion of 1021 and 1022)*

ML 1022 continues by providing cadets with interesting lessons yielding immediately useful skills. The course also gives accurate information about life in the Army, including the organization of the Army, employment benefits, and work experiences of junior officers. Participation in weekly training leadership laboratories; off campus training sessions (field training exercises) and other special events is required.

ML 2011. INDIVIDUAL LEADERSHIP STUDIES I.*Cat. I (1/12 unit)*

Introduces students to team building techniques. Students build upon the basic leader principals and leadership development methodologies to refine their understanding of leadership. How to build teams, how to influence, how to communicate, how and when to make decision, and creative problem-solving. Participation in weekly training leadership laboratories; off campus training sessions (field training exercises) and other special events is required.

Recommended background: ML1022

ML 2012. INDIVIDUAL LEADERSHIP STUDIES II.*Cat. I (1/12 unit)*

The curriculum focuses on building character. Where years one, three and four focus on mastering definitions, concepts, ideas and principles, year two focuses on direct, physical experiences. Year two centers on giving cadets the opportunity to apply, practice and experience leadership principles. Cadets are asked to reflect upon their actions and those of others. Participation in weekly training leadership laboratories; off campus training sessions (field training exercises) and other special events is required.

Recommended background: ML 2011

ML 2021. LEADERSHIP AND TEAMWORK I.*Cat. I (1/12 unit)*

Students continue the study of leader principals and are introduced to formal policies such as equal opportunity, ethics, and values. Military communication skills are trained along with the principles of camouflage. Complex cases of risk management are studied. Students will submit a written information paper. Participation in weekly training leadership laboratories; off campus training sessions (field training exercises) and other special events is required.

Recommended background: ML2012

ML 2022. LEADERSHIP AND TEAMWORK II.*Cat. I (1/12 unit)*

This course covers small unit movement and military tactics. It combines previous study in weapons, movement and communications to teach the combination of firepower and maneuver to the student. This course also teaches the student the elements of how the military trains its personnel. A written decision paper and practical exercise in conducting training is included in this course. Participation in weekly training leadership laboratories; off campus training sessions (field training exercises) and other special events is required.

Recommended background: ML 2021

ML 2091. LEADERSHIP TRAINING COURSE.*Cat. I (1/6 unit)*

LTC puts each cadet through 24 days of pushing themselves to the mental and physical limits, while enhancing leadership, problem solving and teamwork skills. Cadets are put through extensive leadership training, which includes leadership reaction scenarios; Land Navigation exercises, first aid training. Cadets must pass the Army Fitness Test (APFT) in order to graduate.

ML 3011. LEADERSHIP AND PROBLEM SOLVING I.*Cat. I (1/6 unit)*

This course focuses on development of individual leadership abilities. This course reviews leadership styles, management strategies and training techniques for leaders of small units. Promoting and developing communication skills and teamwork are addressed. Examines leadership of small units conducting conventional combat operations and tactical employment of weapon systems. Development of oral communication skills through military briefings and issuance of operations orders. Special attention is placed on evaluations through practical exercises. Participation in weekly training leadership laboratories; off campus training sessions (field training exercises) and other special events is required. Recommended background: Students must have completed the basic course or ROTC Leadership Training course and have signed a personal contract with the US Army. Department Head approval is required.

ML 3012. LEADERSHIP AND PROBLEM SOLVING II.*Cat. I (1/6 unit)*

Student learns how to conduct crisis planning and management. Discussion of roles and functions of combat arms, combat support, and combat service support branches. Case studies of small-unit operations are studied. Introduction to Army special operations, military operations other than war, and trends in the military. Students write self-evaluations throughout this course. Students are graded on their performance during leadership practical exercises. Attendance at monthly labs and formal social functions is required. Students write self-evaluations through this course. Students are graded on their performance during leadership practical exercises. Participation in weekly training leadership laboratories; off campus training sessions (field training exercises) and other special events is required.

Recommended background: ML 3011

ML 3021. LEADERSHIP AND ETHICS I.*Cat. I (1/6 unit)*

ML 3021 is designed to continue the development as leaders by presenting instruction in the three foundational areas of leadership, interpersonal communication, and values and ethics. The leadership module contains an examination of Army leadership doctrine followed by expansion on key leadership concepts and provide feedback for cadet leadership self-development efforts. Participation in weekly training leadership laboratories; off campus training sessions (field training exercises) and other special events is required.

ML 3022. LEADERSHIP AND ETHICS II.*Cat. I (1/6 unit)*

The main thrust of the communication module is the opportunity for cadets to present an information briefing and receive feedback from both instructor and fellow students. The last module of the term contains lessons that focus on values, ethics, ethical decision-making, consideration of others, and spiritual needs. Participation in weekly training leadership laboratories; off campus training sessions (field training exercises) and other special events is required.

Recommended background: ML 3021

ML 3023. LEADERSHIP DEVELOPMENT AND ASSESSMENT COURSE .*Cat. I (1/6 unit)*

LDAC puts each cadet through 32 days of intensive individual, squad and platoon-level training to assess his/her leadership potential. Each cadet is measured against 23 leadership dimensions in such subjects as physical stamina, technical competence, delegation, decisiveness, problem analysis and the several Army values, among others. Instruction and evaluation at LDAC is progressive, building skills in individual subjects like the Army Physical Fitness Test, basic military skills and land navigation, followed by such skill-building exercises as Individual Tactical Training.

ML 4011. LEADERSHIP AND MANAGEMENT I.*Cat. I (1/6 unit)*

ML 4011 begins with a series of lessons designed to enable the cadets to make informed career decisions as they prepare their accessions documents. Lessons concentrate on Army operations and training management, communications and leadership skills and support the beginning of the final transition from cadet to lieutenant. The course focuses cadets, early in the year, on attaining knowledge and proficiency in several critical areas they will need to operate effectively as Army officers. These areas include: the Army's training management system, coordinating activities with staffs, and counseling skills. While the proficiency attained in each of these areas will initially be at the apprentice level, cadets will continue to sharpen these skills as they perform their roles as cadet officers in the ROTC battalion and as new lieutenants after commissioning. At the end of this semester cadets should possess the fundamental skills, attributes, and abilities to operate as competent leaders in the cadet battalion and confidently shoulder the responsibilities entrusted to them. Participation in weekly training leadership laboratories; off campus training sessions (field training exercises) and other special events is required.

ML 4022. LEADERSHIP AND MANAGEMENT II.*Cat. I (1/6 unit)*

This Course focuses on completing the transition from cadet to lieutenant. As an expansion of the Ethics instruction in ML 3021, the course starts with an examination of unit ethical climate and the commander's role as the moral anchor of the unit. This is followed by a module addressing military law and leadership. The next module reinforces previous instruction on the organization of the Army and introduces how the Army organizes for operations from the tactical to strategic level. This is followed by instruction on administrative and logistical management that focuses on the fundamentals of soldier and unit level

support. Next is a short module that focuses on preparing cadets for their forthcoming commissioning and military service. At the core of this semester is the Advanced Course's Capstone Exercise. This twelve-lesson exercise directly reinforces all modules from this term, and also incorporates and reinforces many learning objectives from modules throughout the entire curriculum. The Capstone Exercise requires cadets, both individually and collectively, to apply their knowledge to solve problems and confront situations commonly faced by junior officers. Upon completion of this course the cadets will be prepared to shoulder the responsibility of being a commissioned officer in the United States Army. Participation in weekly training leadership laboratories; off campus training sessions (field training exercises, Military Staff Ride and other special events) is required.

ML 4023. OFFICERSHIP.*Cat. I (1/6 unit)*

This course is a continuation of ML 4022.

ML 4024. TRANSITION TO LIEUTENANT.*Cat. I (1/6 unit)*

Cadets organize and lead all the junior cadets. This course covers the military legal system, personnel actions and personal finances. It certifies fundamental competencies in land navigation, tactics, counseling, and interpersonal communications. This course requires three hours of class work and three hours of physical fitness per week. Participation in weekly training leadership laboratories; off campus training sessions (field training exercises) and other special events is required.

Recommended background: ML4023

PHYSICAL EDUCATION

PE 1001. INTRO TO GOLF & TENNIS.*Cat. I (1/12 unit)*

Introduction to the sports through skill development and play.

PE 1002. INTRO TO VOLLEYBALL & SQUASH.*Cat. I (1/12 unit)*

Introduction to the sports through skill development and play.

PE 1003. INTRO TO BOWLING & BADMINTON.*Cat. I (1/12 unit)*

Introduction to the sports through skill development and play.

PE 1004. INTRO TO TABLE TENNIS, GOLF, & TENNIS.*Cat. I (1/12 unit)*

Introduction to the sports through skill development and play.

PE 1006. WELLNESS.*Cat. I (1/12 unit)*

Introductory course designed to acquaint students with knowledge and skills necessary to make choices that foster health and well-being.

PE 1007. BASIC WATER SAFETY.*Cat. I (1/12 unit)*

For the intermediate to advanced swimmer only. Students will learn about water recreational activities and how to remain safe while participating in them. Opportunity to learn the necessary means for safety in/near water and basic rescue techniques.

PE 1008. ROWING FOR FITNESS.*Cat. I*

This course will teach basic rowing training techniques and principles with the goal for students to develop and implement an individualized conditioning program for themselves. All classes will be conducted on-campus through the use of rowing machines located in the Sports and Recreation Center.

PE 1009. WALKING FOR FITNESS.*Cat. I*

This course will teach basic walking techniques and principles with the goal for students to develop and implement an individualized conditioning program for themselves.

PE 1011. TOUCH FOOTBALL.*Cat. I (1/12 unit)*

Introduction to basic rules and individual/team skill development with practical application through game competition.

PE 1012. BASKETBALL.*Cat. I (1/12 unit)*

Introduction to basic rules and individual/team skill development with practical application through game competition.

PE 1013. SOFTBALL.*Cat. I (1/12 unit)*

Introduction to basic rules and individual/team skill development with practical application through game competition.

PE 1014. TENNIS.*Cat. I (1/12 unit)*

Instruction will focus on basic strokes and techniques. Rules, strategy and play will be integrated as students' skills develop.

PE 1015. BADMINTON & TABLE TENNIS.*Cat. I (1/12 unit)*

Instruction will focus on basic strokes and techniques. Rules, strategy and play will be integrated as students' skills develop.

PE 1016. SQUASH & RACQUETBALL.*Cat. I (1/12 unit)*

Instruction will focus on basic strokes and techniques. Rules, strategy and play will be integrated as students' skills develop.

PE 1017. BEGINNING SWIMMING.*Cat. I (1/12 unit)*

For the non-swimmer. Students will receive instruction in basic survival skills and the primary techniques to learn to swim safely.

PE 1018. CO-ED VOLLEYBALL.*Cat. I (1/12 unit)*

Introduction to basic rules and individual/team skill development with practical application through game competition.

PE 1019. SOCCER.*Cat. I*

Introduction to basic rules and individual/team skill development with practical application through game competition.

PE 1021. BOWLING.*Cat. I (1/12 unit)*

Introductory course designed to acquaint students with the basic skills, knowledge and practical experience.

PE 1055. PHYSICAL CONDITIONING.*Cat. I (1/12 unit)*

This course will teach basic strength training principles and techniques. Students will develop and implement an individualized conditioning program.

PE 1056. LIFEGUARDING I.*Cat. I (1/12 unit)***PE 1057. LIFEGUARDING II.***Cat. I (1/12 unit)*

This class is based on the Red Cross Manual for Lifeguarding. Red Cross fee and books are required. The Lifeguard I course is the first part of a two course requirement (Lifeguarding I and II) for a student to be certified in CPR for the Professional Rescuer, First Aid, AED, Oxygen Administration and Lifeguarding.

Recommended background: PE 1007, PE 1056.

For certification, both PE 1056 and PE 1057 must be completed in the same calendar year.

PE 1059. WEIGHT TRAINING PROGRAM FOR WOMEN.*Cat. I (1/12 unit)*

This introductory course is designed to acquaint women with circuit training and free weight programs.

PE 1070. LEISURE EDUCATION: REDEFINING SOCIAL NORMS.*Cat. I (1/12 unit)*

Introductory course designed to explore various leisure education alternatives.

PE 1077. SWIMMING FOR FITNESS.*Cat. I (1/12 unit)*

For the intermediate to advanced swimmer. This class is geared toward swimming for fitness purposes. Workouts will be administered each class period with students developing the knowledge to create workouts for themselves.

PE 1078. AQUATIC CONDITIONING.*Cat. I*

This course will teach aquatic conditioning (aerobics, walking, strength and interval training) with the goal for students to develop and implement an individualized aquatic conditioning program for themselves. For the intermediate and advanced swimmer. All classes will be conducted on-campus through the use of the pool located in the Sports and Recreation Center.

PE 1100. SERIES.*Cat. I (1/12 unit)*

Credit for activity in one of three categories: 1) WPI athletic team participation, 2) club sports, 3) approved courses not offered at WPI.

PHYSICS

The second digit in physics course numbers is coded as follows.

- 1 — General physics
- 2 — Theoretical mechanics, statistical physics, kinetic theory, etc.
- 3 — Electricity and magnetism, electromagnetic theory
- 4 — Quantum mechanics
- 5 — Particular topics
- 6 — Laboratory

INTRODUCTORY PHYSICS SEQUENCE

There are four course topics in the introductory physics sequence. The four topics are Classical Mechanics (PH 1110/PH 1111), Electricity and Magnetism (PH 1120/PH 1121), 20th Century Physics (PH 1130), and Oscillations and Waves (PH 1140). Each course includes a laboratory component.

Students should take either PH 1110 or PH 1111, but not both; similarly, either PH 1120 or PH 1121, but not both. The primary difference between the PH 1110-PH 1120 option and PH 1111-PH 1121 is that the material in PH 1111- PH 1121 is treated somewhat more formally and rigorously than in PH 1110-PH 1120, thus presuming a better-than-average mathematics background. The recommended mathematics background for each course is indicated in the respective course description and should be considered carefully in each case.

Because the topics covered in the two mechanics and in the two electricity and magnetism courses are the same, it is possible to cross over from one sequence to the other. For example, PH 1120 could be taken after PH 1111, or, upon consulting with the course instructor, PH 1121 could be taken after successful completion of PH 1110. Finally, it should be noted that any combination of the first two introductory courses provides adequate preparation for both of the remaining courses in 20th Century Physics (PH 1130), and Oscillations and Waves (PH 1140).

The courses in classical mechanics and electricity and magnetism are regarded as essential preparation for many fundamental engineering courses as well as for further work in physics. PH 1130 gives a first introduction to 20th century physics and is designed to provide a context for the appreciation of present-day advances in physics and high-technology applications. PH 1140 deals in depth with oscillating systems, a topic area of fundamental importance in physics, and whose engineering applications span the range from electromagnetic oscillations to the mechanical vibrations of machinery and structures.

PH 1110. GENERAL PHYSICS—MECHANICS.*Cat. I*

Introductory course in Newtonian mechanics.

Topics include: kinematics of motion, vectors, Newton's laws, friction, work-energy, impulse-momentum, for both translational and rotational motion.

Recommended background: concurrent study of MA 1021.

Students many not receive credit for both PH 1110 and PH 1111.

PH 1111. PRINCIPLES OF PHYSICS—MECHANICS.*Cat. I*

An introductory course in Newtonian mechanics that stresses invariance principles and the associated conservation laws.

Topics include: kinematics of motion, vectors and their application to physical problems, dynamics of particles and rigid bodies, energy and momentum conservation, rotational motion.

Recommended background: concurrent study of MA 1023 (or higher).

Students with limited prior college-level calculus preparation are advised to take PH 1110.

Students many not receive credit for both PH 1111 and PH 1110.

PH 1120. GENERAL PHYSICS—ELECTRICITY AND MAGNETISM.*Cat. I*

An introduction to the theory of electricity and magnetism.

Topics include: Coulomb's law, electric and magnetic fields, capacitance, electrical current and resistance, and electromagnetic induction.

Recommended background: working knowledge of the material presented in PH 1110 or PH 1111 and concurrent study of MA 1022.

Students may not receive credit for both PH 1120 and PH 1121.

PH 1121. PRINCIPLES OF PHYSICS—ELECTRICITY AND MAGNETISM.*Cat. I*

An introduction to electricity and magnetism, at a somewhat higher mathematical level than PH 1120.

Topics include: Coulomb's Law, electric fields and potentials, capacitance, electric current and resistance, magnetism, and electromagnetic induction.

Recommended background: working knowledge of material covered in PH 1111 and concurrent study of MA 1024 (or higher). Students concurrently taking MA 1022 or MA 1023 are advised to take PH 1120.

Students may not receive credit for both PH 1121 and PH 1120.

PH 1130. MODERN PHYSICS.*Cat. I*

An introduction to the pivotal ideas and developments of twentieth-century physics.

Topics include: special relativity, photoelectric effect, X-rays, Compton scattering, blackbody radiation, DeBroglie waves, uncertainty principle, Bohr theory of the atom, atomic nuclei, radioactivity, and elementary particles.

Recommended background: familiarity with material covered in PH 1110 and PH 1120 (or PH 1111 and PH 1121) and completion of MA 1021 and MA 1022.

PH 1140. OSCILLATIONS, AND WAVES.*Cat. I*

An introduction to oscillating systems and waves.

Topics include: free, clamped forced, and coupled oscillations of physical systems, traveling waves and wave packets, reflection, and interference phenomena.

Recommended background: working knowledge of the material covered in PH 1110 and PH 1120 (or PH 1111 and PH 1121) and completion of MA 1021, MA 1022 and MA 1023.

PH 2201. INTERMEDIATE MECHANICS I.*Cat. I*

This course emphasizes a systematic approach to the mathematical formulation of mechanics problems and to the physical interpretation of the mathematical solutions.

Topics covered include: Newton's laws of motion, kinematics and dynamics of a single particle, vector analysis, motion of particles, rigid body rotation about an axis.

Recommended background: PH 1110, PH 1120, PH 1130, PH 1140, MA 1021, MA 1022, MA 1023, MA 1024 and concurrent registration in or completion of MA 2051.

PH 2202. INTERMEDIATE MECHANICS II.*Cat. I*

This course is a continuation of the treatment of mechanics started in PH 2201.

Topics covered include: rigid-body dynamics, rotating coordinate systems, Newton's law of gravitation, central-force problem, driven harmonic oscillator, an introduction to generalized coordinates, and the Lagrangian and Hamiltonian formulation of mechanics.

PH 2301. ELECTROMAGNETIC FIELDS.*Cat. I*

Introduction to the theory and application of electromagnetic fields, appropriate as a basis for further study in electromagnetism, optics, and solid-state physics.

Topics: electric field produced by charge distributions, electrostatic potential, electrostatic energy, magnetic force and field produced by currents and by magnetic dipoles, introduction to Maxwell's equations and electromagnetic waves.

Recommended background: introductory electricity and magnetism, vector algebra, integral theorems of vector calculus as covered in MA 2251.

PH 2501. PHOTONICS.*Cat. II*

An introduction to the use of optics for transmission and processing of information. The emphasis is on understanding principles underlying practical photonic devices. Topics include lasers, light emitting diodes, optical fiber communications, fiber lasers and fiber amplifiers, planar optical waveguides,

light modulators and photodetectors. Recommended background is PH 1110, PH 1120, PH 1130 and PH 1140 (or their equivalents).

This course will be offered in 2014-15 and in alternating years thereafter.

PH 2502. LASERS.*Cat. II*

An introduction to the physical principles underlying lasers and their applications. Topics will include the coherent nature of laser light, optical cavities, beam optics, atomic radiation, conditions for laser oscillation, optical amplifiers (including fiber amplifiers), pulsed lasers (Q switching and mode locking), laser excitation (optical and electrical), and selected laser applications. Recommended background is PH 1110, PH 1120, PH 1130 and PH 1140 (or their equivalents).

This course will be offered in 2013-14 and in alternating years thereafter.

PH 2510. ATOMIC FORCE MICROSCOPY.*Cat. II*

Atomic force microscopes (AFMs) are instruments that allow three-dimensional imaging of surfaces with nanometer resolution and are important enabling tools for nanoscience and technology. The student who successfully completes this course will understand the functional principles of AFMs, be able to run one, and interpret the data that are collected.

Recommended background: PH 1110 and 1120. Suggested background: PH 1130 and PH 1140.

This course will be offered in 2014-15 and in alternating years thereafter.

PH 2520. INTRODUCTION TO ASTROPHYSICS.*Cat. II*

A selective study of components of the universe (the solar system, stars, nebulae, galaxies) and of cosmology, based on astronomical observations analyzed and interpreted through the application of physical principles, and organized with the central purpose of presenting the latest understanding of the nature and evolution of the universe. Some topics to be covered include the Big Bang & Inflation; Stellar Behavior & Evolution; White Dwarfs, Neutron Stars, & Supernovae; Black Holes; Dark Matter & Dark Energy.

Recommended background is PH 1110 (or PH 1111), PH 1120 (or PH 1121), and especially PH 1130.

Suggested background: PH 1140.

This course will be offered in 2013-14 and in alternating years thereafter.

PH 2601. PHOTONICS LABORATORY.*Cat. II*

This course provides an experimental approach to concepts covered in Photonics (PH 2501), Lasers (PH 2502), and Optics (PH 3504). Through a series of individually tailored experiments, students will reinforce their knowledge in one or more of these areas, while at the same time gaining exposure to modern photonics laboratory equipment. Experiments available include properties of optical fibers, optical fiber diagnostics, optical communications systems, properties of photodetectors, mode structure and threshold behavior of lasers, coherence properties of laser light, characterization of fiber amplifiers, diffraction of light, polarization of light, interferometry.

Recommended background: PH 1110/1111, PH 1120/1121, PH 1130, PH 1140, and one or more of the courses PH 2501, PH 2502, or PH 3504. No prior laboratory background is expected.

This course will be offered in 2014-15 and in alternating years thereafter.

PH 2651. INTERMEDIATE PHYSICS LABORATORY.*Cat. I*

This course offers experience in experimentation and observation for students of the sciences and others. In a series of subject units, students learn or review the physical principles underlying the phenomena to be observed and the basis for the measurement techniques employed. Principles and uses of laboratory instruments including the cathode-ray oscilloscope, meters for frequency, time, electrical and other quantities are stressed. In addition to systematic measurement procedures and data recording, strong emphasis is placed on processing of the data, preparation and interpretation of graphical presentations, and analysis of precision and accuracy, including determination and interpretation of best value, measures of error and uncertainty, linear best fit to data, and identification of systematic and random errors. Preparation of high-quality experiment reports is also emphasized. Representative experiment subjects are: mechanical motions and vibrations; free and driven electrical oscillations; electric fields and potential; magnetic materials and fields; electron beam dynamics; optics; diffraction-grating spectroscopy; radioactive decay and nuclear energy measurements.

Recommended background: the Introductory Physics course sequence or equivalent. No prior laboratory background beyond that experience is required.

Students who have received credit for PH 2600 or PH 3600 may not receive credit for PH 2651.

PH 3206. STATISTICAL PHYSICS.*Cat. I*

An introduction to the basic principles of thermodynamics and statistical physics.

Topics covered include: basic ideas of probability theory, statistical description of systems of particles, thermodynamic laws, entropy, microcanonical and canonical ensembles, ideal and real gases, ensembles of weakly interacting spin 1/2 systems.

Recommended background: knowledge of quantum mechanics and thermodynamics at the level of ES 3001.

PH 3301. ELECTROMAGNETIC THEORY.*Cat. I*

A continuation of PH 2301, this course deals with more advanced subjects in electromagnetism, as well as study of basic subjects with a more advanced level of mathematical analysis. Fundamentals of electric and magnetic fields, dielectric and magnetic properties of matter, quasi-static time-dependent phenomena, and generation and propagation of electromagnetic waves are investigated from the point of view of the classical Maxwell's equations.

PH 3401. QUANTUM MECHANICS I.*Cat. I*

This course includes a study of the basic postulates of quantum mechanics, its mathematical language and applications to one-dimensional problems. The course is recommended for physics majors and other students whose future work will involve the application of quantum mechanics.

Topics include wave packets, the uncertainty principle, introduction to operator algebra, application of the Schroedinger equation to the simple harmonic oscillator, barrier penetration and potential wells.

Recommended background: Junior standing, MA 4451, and completion of the introductory physics sequence, including the introduction to the 20th century physics.

Suggested background: knowledge (or concurrent study) of linear algebra, Fourier series, and Fourier transforms.

PH 3402. QUANTUM MECHANICS II.*Cat. I*

This course represents a continuation of PH 3401 and includes a study of three-dimensional systems and the application of quantum mechanics in selected fields.

Topics include: the hydrogen atom, angular momentum, spin, perturbation theory and examples of the application of quantum mechanics in fields such as atomic and molecular physics, solid state physics, optics, and nuclear physics.

Recommended background: PH 3401.

PH 3501. RELATIVITY.*Cat. II*

This course is designed to help the student acquire an understanding of the formalism and concepts of relativity as well as its application to physical problems.

Topics include the Lorentz transformation, 4-vectors and tensors, covariance of the equations of physics, transformation of electromagnetic fields, particle kinematics and dynamics.

Recommended background: knowledge of mechanics and electrodynamics at the intermediate level.

This course will be offered in 2014-15 and in alternating years thereafter.

PH 3502. SOLID STATE PHYSICS.*Cat. II*

An introduction to solid state physics.

Topics include: crystallography, lattice vibrations, electron band structure, metals, semiconductors, dielectric and magnetic properties.

Recommended background: prior knowledge of quantum mechanics at an intermediate level.

Suggested background: knowledge of statistical physics is helpful.

This course will be offered in 2014-15 and in alternating years thereafter.

PH 3503. NUCLEAR PHYSICS.*Cat. II*

This course is intended to acquaint the student with the measurable properties of nuclei and the principles necessary to perform these measurements. The major part of the course will be an introduction to the theory of nuclei.

The principal topics will include binding energy, nuclear models and nuclear reactions. The deuteron will be discussed in detail and the nuclear shell model will be treated as well as the nuclear optical model.

Recommended background: some knowledge of the phenomena of modern physics at the level of an introductory physics course and knowledge of intermediate level quantum mechanics.

This course will be offered in 2013-14 and in alternating years thereafter.

PH 3504. OPTICS.*Cat. II*

This course provides an introduction to classical physical optics, in particular interference, diffraction and polarization, and to the elementary theory of lenses. The theory covered will be applied in the analysis of one or more modern optical instruments.

Recommended background: knowledge of introductory electricity and magnetism and of differential equations.

Suggested background: PH 2301.

This course will be offered in 2013-14 and in alternating years thereafter.

PH 4201. ADVANCED CLASSICAL MECHANICS.*Cat. I*

A review of the basic principles and introduction to advanced methods of mechanics, emphasizing the relationship between dynamical symmetries and conserved quantities, as well as classical mechanics as a background to quantum mechanics.

Topics include: Lagrangian mechanics and the variational principle, central force motion, theory of small oscillations, Hamiltonian mechanics, canonical transformations, Hamilton-Jacobi Theory, rigid body motion, and continuous systems.

Recommended background: PH 2201 and PH 2202.

This is a 14-week course.

Graduate Physics Courses of Interest to Undergraduates

PH 511/PH 4201. CLASSICAL MECHANICS.

Lagrangian and Hamiltonian formulations. Central force motion. Rigid body dynamics. Theory of small oscillations. Poisson brackets, Hamilton-Jacobi theory. Continuous systems.

PH 514. QUANTUM MECHANICS I.

Schroedinger wave equation. Harmonic oscillator, hydrogen atom, potential wells, approximation methods.

PH 515. QUANTUM MECHANICS II.

Perturbation theory. Angular momentum. Spin. Scattering theory. Dirac equation.

PH 522. THERMODYNAMICS AND STATISTICAL MECHANICS.

Quantum concepts applied to thermodynamics. Bose-Einstein and Fermi-Dirac statistics.

PH 533. ADVANCED ELECTROMAGNETIC THEORY.

Classical electrodynamics and radiation theory.

ROBOTICS ENGINEERING

RBE 1001. INTRODUCTION TO ROBOTICS (FORMERLY ES 2201).*Cat. I*

Multidisciplinary introduction to robotics, involving concepts from the fields of electrical engineering, mechanical engineering and computer science. Topics covered include sensor performance and integration, electric and pneumatic actuators, power transmission, materials and static force analysis, controls and programmable embedded computer systems, system integration and robotic applications. Laboratory sessions consist of hands-on exercises and team projects where students design and build mobile robots.

Undergraduate credit may not be earned for both this course and for ES 2201.

Recommended background: mechanics (PH 1110/PH 1111).

RBE 2001. UNIFIED ROBOTICS I.*Cat. I*

First of a four-course sequence introducing foundational theory and practice of robotics engineering from the fields of computer science, electrical engineering and mechanical engineering. The focus of this course is the effective conversion of electrical power to mechanical power, and power transmission for purposes of locomotion, and of payload manipulation and delivery. Concepts of energy, power and kinematics will be applied. Concepts from statics such as force, moments and friction will be applied to determine power system requirements and structural requirements. Simple dynamics relating to inertia and the equations of motion of rigid bodies will be considered. Power control and modulation methods will be introduced through software control of existing

embedded processors and power electronics. The necessary programming concepts and interaction with simulators and Integrated Development Environments will be introduced. Laboratory sessions consist of hands-on exercises and team projects where students design and build robots and related sub-systems.

Recommended background: ES 2201/RBE 1001, ES 2501 (can be taken concurrently), ECE 2029 and PH 1120 or PH 1121.

RBE 2002. UNIFIED ROBOTICS II.

Cat. I

Second of a four-course sequence introducing foundational theory and practice of robotics engineering from the fields of computer science, electrical engineering and mechanical engineering. The focus of this course is interaction with the environment through sensors, feedback and decision processes. Concepts of stress and strain as related to sensing of force, and principles of operation and interface methods for electronic transducers of strain, light, proximity and angle will be presented. Basic feedback mechanisms for mechanical systems will be implemented via electronic circuits and software mechanisms. The necessary software concepts will be introduced for modular design and implementation of decision algorithms and finite state machines. Laboratory sessions consist of hands-on exercises and team projects where students design and build robots and related sub-systems.

Recommended background: RBE 2001, CS 1101 or CS 1102

RBE 3001. UNIFIED ROBOTICS III.

Cat. I

Third of a four-course sequence introducing foundational theory and practice of robotics engineering from the fields of computer science, electrical engineering and mechanical engineering. The focus of this course is actuator design, embedded computing and complex response processes. Concepts of dynamic response as relates to vibration and motion planning will be presented. The principles of operation and interface methods various actuators will be discussed, including pneumatic, magnetic, piezoelectric, linear, stepper, etc. Complex feedback mechanisms will be implemented using software executing in an embedded system. The necessary concepts for real-time processor programming, re-entrant code and interrupt signaling will be introduced. Laboratory sessions will culminate in the construction of a multi-module robotic system that exemplifies methods introduced during this course.

Recommended background: RBE 2002, ECE 2049, CS 2102, MA 2051, and MA 2071.

RBE 3002. UNIFIED ROBOTICS IV.

Cat. I

Fourth of a four-course sequence introducing foundational theory and practice of robotics engineering from the fields of computer science, electrical engineering and mechanical engineering. The focus of this course is navigation, position estimation and communications. Concepts of dead reckoning, landmark updates, inertial sensors, and radio location will be explored. Control systems as applied to navigation will be presented. Communication, remote control and remote sensing for mobile robots and tele-robotic systems will be introduced. Wireless communications including wireless networks and typical local and wide area networking protocols will be discussed. Considerations will be discussed regarding operation in difficult environments such as underwater, aerospace, hazardous, etc. Laboratory sessions will be directed towards the solution of an open-ended problem over the course of the entire term.

Recommended background: RBE 3001, ES 3011, MA 2621, or MA 2631.

RBE/ME 4322. MODELING AND ANALYSIS OF MECHATRONIC SYSTEMS.

Cat. I

This course introduces students to the modeling and analysis of mechatronic systems. Creation of dynamic models and analysis of model response using the bond graph modeling language are emphasized. Lecture topics include energy storage and dissipation elements, transducers, transformers, formulation of equations for dynamic systems, time response of linear systems, and system control through open and closed feedback loops. Computers are used extensively for system modeling, analysis, and control. Hands-on projects will include the reverse engineering and modeling of various physical systems. Physical models may sometimes also be built and tested.

Recommended background: mathematics (MA 2051, MA 2071), fluids (ES 3004), thermodynamics (ES 3001), mechanics (ES 2501, ES 2503)

RBE/ME 4815. INDUSTRIAL ROBOTICS.

Cat. I

This course introduces students to robotics within manufacturing systems. Topics include: classification of robots, robot kinematics, motion generation and transmission, end effectors, motion accuracy, sensors, robot control and automation. This course is a combination of lecture, laboratory and project work, and utilizes industrial robots. Through the laboratory work, students will become familiar with robotic programming (using a robotic programming language VAL II) and the robotic teaching mode. The experimental component of the laboratory exercise measures the motion and positioning capabilities of robots as a function of several robotic variables and levels, and it includes the use of experimental design techniques and analysis of variance.

Recommended background: manufacturing (ME 1800), kinematics (ME 3310), control (ES 3011), and computer programming.

SOCIAL SCIENCE AND POLICY STUDIES

ECON	Economics
ENV	Environmental Studies
GOV	Political Science, Government and Law
PSY	Psychology
SD	System Dynamics
SOC	Sociology
SS	General Social Science
STS	Society/Technology Studies

ECONOMICS (ECON)

ECON 1110. INTRODUCTORY MICROECONOMICS.

Cat. I

The course focuses upon the implications of reliance upon markets for the allocation of resources in a society, at the household, firm, and community level. Outcomes of current market systems are examined in terms of the efficient use of natural and other economic resources, as well as their impact upon the environment, fairness, and social welfare. of special interest in these analyses is the role of prices in the determination of what commodities are produced, their means of production, and distribution among households. In cases where current market outcomes have features subject to widespread criticism, such as the presence of excessive pollution, risk, discrimination, and poverty, the analysis is extended to suggest economic solutions. There are no prerequisites for the course.

ECON 1120. INTRODUCTORY MACROECONOMICS.

Cat. I

This course is designed to acquaint students with the ways in which macroeconomic variables such as national income, employment and the general level of prices are determined in an economic system. It also includes a study of how the techniques of monetary policy and fiscal policy attempt to achieve stability in the general price level and growth in national income and employment. The problems of achieving these national goals (simultaneously) are also analyzed. The course stresses economic issues in public policy and international trade.

ECON 1130. INTRODUCTION TO ECONOMETRIC MODELING.

ISP Only

The purpose of this course is to provide students with an introduction to econometric modeling as it is applied in economics and to illustrate how it can be used in harmony with, or as an alternative to, system dynamics modeling. The first quarter of the course is devoted to discussing the methodological similarities and differences between econometric and system dynamics modeling, acquainting students with both the primary (survey instruments and controlled experiments) and secondary (government agencies and NGOs) sources of economic and social science data, and reviewing the basics of descriptive and inferential statistics. The remaining three quarters of the course are devoted to an examination of the assumptions that underlie the ordinary least squares model, the problems that occur when these assumptions are violated, and the methods that are available for correcting these problems. Throughout this process, the use of socioeconomic data, and the roles of economic theory and econometric software in modeling are emphasized. The course concludes with a presentation of how the econometric modeling can be used to complement system dynamics modeling.

ECON 2110. INTERMEDIATE MICROECONOMICS.*Cat. II*

The topics addressed in this course are similar to those covered in ECON 1110 (Introductory Microeconomics) but the treatment proceeds in a more rigorous and theoretical fashion to provide a firm platform for students majoring in Economics or Management, or those having a strong interest in economics. Mathematics at a level comparable to that taught in MA 1021-MA 1024 is frequently applied to lend precision to the analysis. The course rigorously develops the microeconomic foundations of the theory of the firm, the theory of the consumer, the theory of markets, and the conditions required for efficiency in economic systems.

Recommended background: ECON 1110.

This course will be offered in 2013-14 and in alternating years thereafter.

ECON 2117. ENVIRONMENTAL ECONOMICS.*Cat. II*

This course investigates the effect of human activity upon the environment as well as the effect of the environment on human well-being. It pays special attention to the impact of production and consumption of material goods upon the quantity and quality of environmental goods. The analysis focuses on the challenges presented in mixed economics where markets are combined with government intervention to manage pollution and scarcity. The course reviews efforts to measure the costs and benefits of improving environmental conditions and evaluates current and potential policies in terms of the costs of the environmental improvements they may yield. Attention is also paid to the special difficulties which arise when the impacts of pollution spill across traditional political boundaries. Recommended background: ECON 1110.

This course will be offered in 2014-15 and in alternating years thereafter.

ECON 2120. INTERMEDIATE MACROECONOMICS.*Cat. II*

This course is an advanced treatment of macroeconomic theory well suited for students majoring in Economics or Management, or others with a strong interest in economics. The topics addressed in ECON 2120 are similar to those covered in ECON 1120, however the presentation of the material will proceed in a more rigorous and theoretical fashion.

Recommended background: ECON 1110.

This course will be offered in 2014-15 and in alternating years thereafter.

ECON 2125. DEVELOPMENT ECONOMICS.*Cat. II*

This course is a general introduction to the field of development economics. The focus is on ways in which a developing country can increase its productive capacity, both agricultural and industrial, in order to achieve sustained economic growth. The course proceeds by first examining how economic growth and economic development are measured and how the various nations of the world compare according to well-known social and economic indicators. Theories of economic growth and theories of economic development are then examined, as are the various social and cultural structures that are thought to influence economic progress. The inputs to economic growth and development (land, labor, capital, entrepreneurial ability, education, technical change), and the possible distributions of income and levels of employment that result from their use, is considered next. Domestic economic problems and policies such as development planning, the choice of sectorial policies, the choice of monetary and fiscal policies, rapid population growth, and urbanization and urban economic development are then examined. The course concludes with a consideration of international problems and policies such as import substitution and export promotion, foreign debt, foreign investment, and the role of international firms. In conjunction with a traditional presentation of the above topics, the course curriculum will include the use of computer simulation models and games. These materials have been formulated with a simulation technique, system dynamics, that has its origins in control engineering and the theory of servomechanisms. As a result, students will find them complementary to their work in engineering and science. In addition, the various development theories and simulation and gaming results will be related, where possible, to specific developing nations where WPI has on-going project activities (e.g., Costa Rica and Thailand). This course is recommended for those students wishing to do an IQP or MQP in a developing nation.

Recommended background: ECON 1120.

This course will be offered in 2013-14 and in alternating years thereafter.

ECON 2135. INFORMATION ECONOMICS AND POLICY.*Cat. II*

This course provides an introduction to the economics, business strategies, and regulatory and legal aspects of telecommunication markets. The analysis of complex interactions between technology, Federal and state government policies, copyright legislation, and forces driving supply and demand is performed using Economic and Industrial Organization theories combined with computer simulation techniques. Topics include, among others: the economics of telephony services, cable TV, satellite communication, spectrum auctions, WLAN, and peer-to-peer file sharing. Special attention will be paid to the analysis of the latest regulatory and legal developments in the telecommunication industry.

Recommended background: ECON 1110 or ECON 2110.

This course will be offered in 2013-14 and in alternating years thereafter.

ECON 2155. EXPERIMENTAL ECONOMICS.*Cat. II*

Experimental economics is a set of methods for testing hypotheses about behavior. Traditional economic analysis using naturally occurring data is often confounded by the complexities of the real world. Economic experiments, on the other hand, give researchers the control required for isolating behaviors of interest. As such, economic experiments can be useful tools for testing existing theories and establishing empirical regularities assisting in the development of new theories. In this course, we cover the basic principles of experimental design. We also study a number of classic experiments, on topics ranging from the efficiency of markets to decision-making under uncertainty and behavioral game theory. Students will participate in mock experiments and will begin putting their new skills into practice by designing their own experiments, which may serve as the basis for IQPs/MQPs. If time permits, we will discuss some of the basic methods for analyzing experimental data, which presents challenges somewhat different from naturally occurring data due to small sample sizes.

Recommended Background: ECON 1110

This course will be offered in 2013-14 and in alternating years thereafter.

ENVIRONMENTAL STUDIES (ENV)

ENV 1100. INTRODUCTION TO ENVIRONMENTAL STUDIES.*Cat. I*

The study of environmental problems and their solutions requires an interdisciplinary approach. This course will examine current environmental issues from the intersection of several key disciplines including: environmental philosophy and history, environmental policy, and science. The course will develop these different approaches for analyzing environmental problems, explore the tensions between them, and present a framework for integrating them. Topics such as environmental justice, developing nations, globalization, and climate change policy will be explored.

ENV 2200. ENVIRONMENTAL STUDIES IN THE VARIOUS DISCIPLINES.*Cat. II*

Many disciplines contribute to the study of the environment. This course presents an overview of the approach taken by some of these disciplines, which may include biology, chemistry, engineering, geography, public policy, philosophy, history, and economics, and how they interact to help us understand environmental problems and solutions. Through an examination of the assumptions made and lenses used by different disciplines students will gain insight into how different actors and institutions frame environmental issues and how to overcome barriers to communication between disciplines. To ground the exploration of these disciplines contemporary environmental issues and policy programs will be explored.

Recommended background: ENV 1100.

This course will be offered in 2014-15 and in alternating years thereafter.

ENV 2400. ENVIRONMENTAL PROBLEMS AND HUMAN BEHAVIOR.*Cat. II*

This course examines how people think about and behave toward the environment. Environmental problems can ultimately be attributed to the environmental decisions and actions of human beings. These behaviors can in turn be understood as resulting from the nature and limitations of the human mind and the social context in which behavior takes place. Knowledge of the root causes of environmentally harmful behavior is essential for designing effective solutions to environmental problems. The goals of the course are (1) to

provide students with the basic social science knowledge needed to understand and evaluate the behavioral aspects of such important environmental problems as air and water pollution, global warming, ozone depletion, preserving biological diversity, and hazardous waste and (2) to help students identify and improve shortcomings in their knowledge and decisions related to the environment. Topics will include, but not be limited to: environmental problems as “tragedies of the commons”; public understanding of global warming and global climate modeling; folk biology; risk perception; intelligent criticism of environmental claims; making effective environmental choices; strategies for promoting pro-environmental behavior; and human ability to model and manage the global environmental future.

Recommended background: ENV 1100.

Suggested background: PSY 1400, PSY 1401, or PSY 1402.

Students may not receive credit for both PSY 2405 and ENV 2400.

This course will be offered in 2013-14 and in alternate years thereafter.

ENV 2600. ENVIRONMENTAL PROBLEMS IN THE DEVELOPING WORLD.

Cat. II

Environment and development are often seen as incompatible, in part because many poor people in the developing world depend directly on natural resources for their livelihoods. At the same time, poor people are often seen as responsible for causing environmental degradation because they lack the knowledge, skills and resources to manage the environment effectively. The vicious circle is completed as environmental degradation exacerbates poverty. However, optimists argue that poor people can and do contribute positively to environmental outcomes, that states and organizations can facilitate their efforts and that environmental interventions can coincide with development. This course will examine these different perspectives on environmental problems in the developing world through the insights and critiques of social science. Subjects covered include sustainable development, population, environmental risks, gender, urbanization, environmental decision making, and non-governmental organizations (NGOs). The goals of this course are to think critically about the various links between environment and development and the role of governmental and non-governmental organizations in promoting sustainable development in the developing world.

Recommended Background: ENV 1100

This course will be offered in 2013-14 and in alternating years thereafter.

ENV 4400. SENIOR SEMINAR IN ENVIRONMENTAL STUDIES.

Cat. I

This course is intended for Environmental Studies majors. The course is designed to integrate each student's educational experience (e.g., core environmental courses, environmental electives, and environmental projects) in a capstone seminar in Environmental Studies. Through seminar discussions and writing assignments students will critically reflect on what they learned in their previous courses and project experiences. In teams, students will prepare a final capstone paper and presentation that critically engages their educational experience in environmental studies and anticipates how their courses and experiences will translate into their future personal and professional environmental experiences.

Recommended background: ENV 1100, ENV 2200 or ENV 2400, completion or concurrent enrollment in IQP and MQP.

POLITICAL SCIENCE, GOVERNMENT AND LAW (GOV)

GOV 1301. U.S. GOVERNMENT.

Cat. I

This course is an introduction to the fundamental principles, institutions, and processes of the constitutional democracy of the United States. It examines the formal structure of the Federal system of government, including Congress, the presidency, the judiciary, and the various departments, agencies, and commissions which comprise the executive branch. Emphasis is placed on the relationships among Federal, state and local governments in the formulation and administration of domestic policies, and on the interactions among interest groups, elected officials and the public at large with administrators in the policy process. The various topics covered in the survey are linked by consideration of fiscal and budgetary issues, executive management, legislative oversight, administrative discretion, policy analysis and evaluation and democratic accountability.

GOV 1303. AMERICAN PUBLIC POLICY.

Cat. I

American Public Policy focuses on the outcomes or products of political institutions and political controversy. The course first addresses the dynamics of policy formations and stalemate, the identification of policy goals, success and failure in implementation, and techniques of policy analysis. Students are then encouraged to apply these concepts in the study of a specific policy area of their choosing, such as foreign, social, urban, energy or environmental policy. This course is an important first step for students wishing to complete IQPs in public policy research. Students are encouraged to complete GOV 1303 prior to enrolling in upper level policy courses such as GOV 2303, GOV 2304 or GOV 2311. There is no specific preparation for this course, but a basic understanding of American political institutions is assumed.

GOV 1310. LAW, COURTS, AND POLITICS.

Cat. II

This course is an introduction to law and the role courts play in society. The course examines the structure of judicial systems, the nature of civil and criminal law, police practice in the enforcement of criminal law, and the responsibilities of judges, attorneys and prosecutors. Additional topics for discussion include the interpretation of precedent and statute in a common law system and how judicial discretion enables interest groups to use courts for social change. The student is expected to complete the course with an understanding of how courts exercise and thereby control the power of the state. As such, courts function as political actors in a complex system of governance. It is recommended that students complete this course before enrolling in GOV 2310, Constitutional Law.

This course will be offered in 2013-14 and in alternating years thereafter.

GOV 1320. TOPICS IN INTERNATIONAL POLITICS.

Cat. II

GOV 1320 is a survey course designed to introduce students to the basic concepts of international relations: power and influence, nations and states, sovereignty and law. These concepts will be explored through the study of issues such as diplomacy and its uses, theories of collective security and conflict, and international order and development. The study of international organizations such as the UN, the European Union or the Organization of American States will also supplement the students' understanding of the basic concepts. The course may also include comparative political analysis of states or regions. It is designed to provide the basic background materials for students who wish to complete IQPs on topics that involve international relations or comparative political systems.

This course will be offered in 2014-15 and in alternating years thereafter.

GOV 2302. SCIENCE-TECHNOLOGY POLICY.

Cat. II

This course is an examination of the relationship between science-technology and government. It reviews the history of public policy for science and technology, theories and opinions about the proper role of government and several current issues on the national political agenda. Examples of these issues include genetic engineering, the environment and engineering education. It also examines the formation of science policy, the politics of science and technology, the science bureaucracy, enduring controversies such as public participation in scientific debates, the most effective means for supporting research, and the regulation of technology. Throughout the course we will pay particular attention to the fundamental theme: the tension between government demands for accountability and the scientific community's commitment to autonomy and self-regulation.

Recommended background: GOV 1301 or GOV 1303.

This course will be offered in 2014-15 and in alternating years thereafter.

GOV 2310. CONSTITUTIONAL LAW: FOUNDATIONS OF GOVERNMENT.

Cat. II

Constitutional Law is the study of Supreme Court decisions interpreting the U. S. Constitution. The Foundations course focuses on the powers of the Congress, the Presidency and the Judicial Branch, especially the Supreme Court's understanding of its own power. These cases reveal, in particular, the evolution of Federal power with the development of a national economy and the shifting balance of power among the three branches of government. Issues of state power in a federal system are also addressed. Lastly, these materials are examined in the context of the great debates regarding how judges interpret the Constitution. How are the words and intent of the Founders applicable to the legal and political conflicts of the twenty-first century?

This course will be offered in 2014-15 and in alternating years thereafter.

GOV 2311. ENVIRONMENTAL POLICY AND LAW.*Cat. I*

This course deals with environmental law as it relates to people, pollution and land use in our society. A case method approach will be used to illustrate how the courts and legislators have dealt with these social-legal problems. The course is designed to have the student consider: 1) the legal framework within which environmental law operates; 2) the governmental institutions involved in the formulation, interpretation and application of environmental law; 3) the nature of the legal procedures and substantive principles currently being invoked to resolve environmental problems; 4) the types of hazards to the environment presently subject to legal constraints; 5) the impact that the mandates of environmental law have had, and will have, on personal liberties and property rights; 6) the role individuals and groups can play within the context of our legal system to protect and improve man's terrestrial habitat and the earth's atmosphere; and 7) some methods and sources for legal research that they may use on their own.

Recommended background: GOV 1303 or GOV 1310.

GOV 2312. INTERNATIONAL ENVIRONMENTAL POLICY.*Cat. II*

Environmental issues present some of the major international problems and opportunities facing the world today. Worst-case scenarios envision irrevocable degradation of the earth's natural systems, but virtually every analysis sees the need for major change worldwide to cope with problems such as global warming, deforestation, ozone layer depletion, loss of biodiversity, and population growth, not to mention exponential increases in "conventional" pollutants in newly industrialized countries. The global environment issues represent a "second-generation" of environmental policy in which the focus of concern has moved from national regulations to international law and institutions. In addition, the environment has emerged as a major aspect of international trade, conditioning corporate investment and accounting for some \$200 billion in sales of pollution control equipment in 1991. Exploration of the genesis and implications of these phenomena is the essence of the course. Topically, the material begins with the nature of global environmental problems, drawing on literature from large-scale global modeling as well as particular analyses of the problems mentioned above. Approximately half the course focuses on international laws and institutions, including multilateral treaties (e.g., the Montreal Protocol limiting CFC use, ocean dumping, biodiversity), international institutions (UNEP, the Rio Convention, the OECD) and private initiatives (international standards organizations, ICOLP (Industry Committee for Ozone Layer Protection), etc.) In addition, US policy toward global environmental issues will be compared with that in Japan, Europe and developing countries, from which it differs significantly. Students will design and undertake term projects that address particular issues in detail in an interdisciplinary manner.

Recommended background: GOV 1303.

This course will be offered in 2013-14 and in alternating years thereafter.

GOV 2313. INTELLECTUAL PROPERTY LAW.*Cat. II*

Intellectual property includes ideas, and the works of inventors, authors, composers and other creative people. Patents, copyrights and trademarks establish legal rights in intellectual property. Alternatively, control over the use of an idea might be maintained by treating it as a trade secret. In these ways, the ideas of inventors and creators are protected and others are prohibited from appropriating the ideas and creative works of others. This course addresses the concept of intellectual property and the public policies that support the law of patent, copyright and trademark. Subjects include the process of obtaining patents, trademarks and copyrights; requirements of originality and, for patents, utility; infringement issues; and the problems posed by international trade and efforts to address them through the World Intellectual Property Organization.

Recommended background: GOV 1310 or GOV 2310.

This course will be offered in 2013-14 and in alternating years thereafter.

GOV/ID 2314. CYBERLAW AND POLICY.*Cat. II*

Rapidly developing technologies for computing, information management and communications have been quickly adopted in schools, businesses and homes. The growth of the Internet and of e-commerce, in particular, have given rise to an entirely new set of legal issues as the courts, Congress and international bodies struggle to keep pace with changing technology. This course addresses the government's role in the development of these technologies and the legal issues that result including questions regarding privacy rights, speech and defamation,

and the application of patent and copyright law. Policy questions such as surveillance of e-mail, regulation of content, mandates on the use of filters, and the responsibilities and liability of internet service providers are also discussed. Additional policies studied include attempts to control Internet content and enforce international judgments (resulting from e-commerce or cyber-crime) by foreign states and/or international organizations. Students are expected to integrate knowledge of technology with law, politics, economics and international affairs.

This course will be offered in 2014-15 and in alternating years thereafter.

GOV 2319. GLOBAL ENVIRONMENTAL POLITICS.*Cat. II*

It is apparent that environmental problems have outgrown national policy frameworks. Thus, institutions have emerged at the international and transnational levels to coordinate collective problem solving. But governance involves more than just the practicality of problem solving; it also involves uncertainty, controversy, power and politics. This course will examine the ways in which global environmental governance has been conceived: from establishing international institutions and agreements, to less tangible ways of interacting. We will examine themes such as scales of governance (from the United Nations to communities), policy networks, the role of NGOs, think tanks and special interests and the role of knowledge in global environmental debates. Students will then use this conceptual and theoretical basis to analyze major global environmental issues including: deforestation; biodiversity; endangered species; and climate change. The goals of this course are to gain an understanding of the main positions in global environmental debates; critically analyze these positions; and gain insight into the politics of global environmental policy and governance.

Recommended Background: GOV 1303 or GOV 1320

This course will be offered in 2013-14 and in alternating years thereafter.

GOV 2320. CONSTITUTIONAL LAW: CIVIL RIGHTS AND LIBERTIES.*Cat. II*

Civil Rights and Liberties examines decisions of the Supreme Court which interpret the Bill of Rights and the Equal Protection Clause of the 14th Amendment. These court decisions elaborate the content and meaning of our rights to speak, publish, practice religion, and be free from state interference in those activities. Privacy rights broadly, the right to be free from unreasonable search and seizure, and due process rights for criminal suspects are also addressed. Finally, rights to be free from discrimination based on race, religion, ethnicity, gender and sexual orientation are examined in the context of equal protection law.

Students completing this course will receive credit toward the Minor in Law and Technology among the courses satisfying the requirement in "legal fundamentals."

This course will be offered in 2013-14 and in alternating years thereafter.

PSYCHOLOGY (PSY)

PSY 1400. INTRODUCTION TO PSYCHOLOGICAL SCIENCE.*Cat. I*

Psychological science is the experimental study of human thought and behavior. Its goal is to contribute to human welfare by developing an understanding of why people do what they do. Experimental psychologists study the entire range of human experience, from infancy until death, from the most abnormal behavior to the most mundane, from the behavior of neurons to the actions of nations. This course offers a broad introduction to important theories, empirical findings, and applications of research in psychological science. Topics will include: use of the scientific method in psychology, evolutionary psychology, behavioral genetics, the anatomy and function of the brain and nervous system, learning, sensation and perception, memory, consciousness, language, intelligence and thinking, life-span development, social cognition and behavior, motivation and emotion, and the nature and treatment of psychological disorders.

PSY 1401. COGNITIVE PSYCHOLOGY.*Cat. I*

This course is concerned with understanding and explaining the mental processes and strategies underlying human behavior. The ways in which sensory input is transformed, reduced, elaborated, stored, and recovered will be examined in order to develop a picture of the human mind as an active processor of information. Topics will include perception, memory, problem-solving, judgment and decision making, human-computer interaction, and artificial

intelligence. Special attention will be paid to defining the limitations of the human cognitive system. Students will undertake a project which employs one of the experimental techniques of cognitive psychology to collect and analyze data on a topic of their own choosing.

Suggested background: PSY 1400.

PSY 1402. SOCIAL PSYCHOLOGY.

Cat. I

Social psychology is concerned with how people think about, feel for, and act toward other people. Social psychologists study how people interact by focusing on the individual (not society as a whole) as the unit of analysis, by emphasizing the effect on the individual of the situation or circumstances in which behavior occurs, and by acquiring knowledge through empirical scientific investigation. This course will examine the cause of human behavior in a variety of domains of social life. Topics will include, but not be limited to, person perception, attitude formation and change, interpersonal attraction, stereotyping and prejudice, and small group behavior. Special attention will be given to applied topics: How can the research methods of social psychology be used to help solve social problems? Students will work together in small groups to explore in depth topics in social psychology of their own choosing.

Suggested background: PSY 1400.

PSY 1504. STRATEGIES FOR IMPROVING COGNITIVE SKILLS.

Cat. I

Life experience provides us with little insight into the basic workings of our own minds. As a result, we tend to approach many of the important problems and decisions of our professional and personal lives with only a dim awareness of the limitations and capabilities of the human cognitive system and how its performance can be improved. The purpose of this course is (1) to provide students with the basic psychological knowledge needed to understand and evaluate such important cognitive skills as memory, problem solving, decision making, and reasoning and (2) to provide students the practical skills and experience necessary to improve and assess their cognitive performance. Topics will include but not be limited to memory improvement, study skills, effective problem solving techniques, creativity, numeracy, making effective choices, risky decision making, dynamic decision making, intelligent criticism of assumptions and arguments, and evaluating claims about the mind.

Suggested background: PSY 1400.

PSY 2401. THE PSYCHOLOGY OF EDUCATION.

Cat. II

This course is concerned with the learning of persons in educational settings from pre-school through college. Material in the course will be organized into five units covering a wide range of topics: Unit 1: Understanding Student Characteristics - Cognitive, Personality, Social, and Moral Development; Unit 2: Understanding the Learning Process - Behavioral, Humanistic, and Cognitive Theories of Learning; Unit 3: Understanding Motivation to Learn; Unit 4: Understanding Student Diversity - Cultural, Economic, and Gender Effects upon Learning; Unit 5: Evaluating Student Learning - Standardized Tests, Intelligence, Grades, and other Assessment Issues. Students planning IQPs in educational settings will find this course particularly useful. Instructional methods will include: lecture, discussion, demonstration, and project work. Course will also focus on current issues in technological education and international higher education.

Recommended background: PSY 1400 or PSY 1401.

This course will be offered in 2013-14, and in alternating years thereafter.

PSY 2406. CROSS-CULTURAL PSYCHOLOGY: HUMAN BEHAVIOR IN GLOBAL PERSPECTIVE.

Cat. II

This course is an introduction to the study of the ways in which social and cultural forces shape human behavior. Cross-Cultural psychology takes a global perspective of human behavior that acknowledges both the uniqueness and interdependence of peoples of the world. Traditional topics of psychology (learning, cognition, personality development) as well as topics central to social psychology, such as intergroup relations and the impact of changing cultural settings, will be explored. Cultural influences on technology development and transfer, as they relate to and impact upon individual behavior, will also be investigated. Students preparing to work at international project centers, International Scholars, and students interested in the global aspects of science and technology will find the material presented in this course especially useful.

Recommended background: PSY 1400 or PSY 1402.

This course will be offered in 2014-15 and in alternating years thereafter.

PSY 2407. PSYCHOLOGY OF GENDER.

Cat. II

This course will provide an overview of the psychological study of gender and will utilize psychological research and theory to examine the influence of gender on the lives of men and women. This course will examine questions such as: What does it mean to be male or female in our society and other societies? How do our constructs of gender develop over our life span? How does our social world (e.g., culture, religion, media) play a role in our construction of gender? and What are the psychological and behavioral differences and similarities between men and women?

Recommended background: PSY 1400 or PSY 1402.

This course will be offered in 2013-14 and in alternating years thereafter.

SYSTEM DYNAMICS (SD)

SD 1510. INTRODUCTION TO SYSTEM DYNAMICS MODELING.

Cat. I

The goal of this course is to provide students with an introduction to the field of system dynamics computer simulation modeling. The course begins with the history of system dynamics and the study of why policy makers can benefit from its use. Next, students systematically examine the various types of dynamic behavior that socioeconomic systems exhibit and learn to identify and model the underlying nonlinear stock-flow-feedback loop structures that cause them. The course concludes with an examination of a set of well-known system dynamics models that have been created to address a variety of socioeconomic problems. Emphasis is placed on how the system dynamics modeling process is used to test proposed policy changes and how the implementation of model-based results can improve the behavior of socioeconomic systems.

SD 1520. SYSTEM DYNAMICS MODELING.

Cat. I

The purpose of this course is to prepare students to produce original system dynamics computer simulation models of economic and social systems. Models of this type can be used to examine the possible impacts of policy changes and technological innovations on socioeconomic systems. The curriculum in this course is divided into three distinct parts. First, a detailed examination of the steps of the system dynamics modeling process: problem identification (including data collection), feedback structure conceptualization, model formulation, model testing and analysis, model documentation and presentation, and policy implementation. Second, a survey of the "nuts and bolts" of continuous simulation modeling: information and material delays, time constants, the use of noise and numerical integration techniques, control theory heuristics, and software details (both simulation and model presentation and documentation software). Third, a step-by-step, in-class production of a model, involving the construction, testing, and assembly of subsectors. Students will be required to complete modeling assignments working in groups and take in-class quizzes on modeling issues.

Recommended background: SD1510, or permission of instructor.

SD 2530. ADVANCED TOPICS IN SYSTEM DYNAMICS MODELING.

ISP Only

This course will focus on advanced issues and topics in system dynamics computer simulation modeling. A variety of options for dealing with complexity through the development of models of large-scale systems and the partitioning complex problems will be discussed. Topics will include an extended discussion of model analysis, the use of summary statistics and sensitivity measures, the model validation process, and policy design. The application of system Dynamics to theory building and social policy are also reviewed. Complex nonlinear dynamics and the chaotic behavior of systems will be discussed. Students will be assigned group exercises centering on model analysis and policy design.

Recommended background: SD 1520.

SD 3550. SYSTEM DYNAMICS SEMINAR.

ISP Only

This special topics course is designed primarily for system dynamics majors and students presently engaged in planning system dynamics projects. The course will be conducted as a research seminar, with many sessions being reserved for student presentations. Classical system dynamics models will be replicated and discussed. Students will read, evaluate, and report on research papers representing the latest developments in the field of system dynamics. They will also complete a term project that addresses a specific problem using the system dynamics method.

Recommended background: SD 1520 and SD 2530.

SOCIOLOGY (SOC)

SOC 1202. INTRODUCTION TO SOCIOLOGY AND CULTURAL DIVERSITY.

Cat. I

The Introduction to Sociology and Cultural Diversity is a Macro-Sociology course on modernization that incorporates a systematic comparison of one of the most and one of the least modernized regions of the World; Europe and the Middle East. However, the focus is on concepts used to describe how the social structure, culture and nature of community were affected by this massive social transition, and how to do qualitative comparative research at the level of whole societies. The field of sociology was created in the 19th century to try to understand the social changes and trends (ranging from social differentiation and demographic transition to the emergence of bureaucracy and secularization) that were sweeping Europe as the area industrialized. Trying to understand what new kind of society was being born amidst the ruins of the old order was the task of Sociology, the new science of society.

The course is designed to give students planning to go to Europe to do project work a chance to learn about the country they will be visiting, while giving everyone a chance to learn something about the Middle East..

GENERAL SOCIAL SCIENCE (SS)

SS/ID 2050. SOCIAL SCIENCE RESEARCH FOR THE IQP.

Cat. I

This course is open to students accepted to off-campus IQP centers and programs. The course introduces students to research design, methods for social science research, and analysis. It also provides practice in specific research and field skills using the project topics students have selected in conjunction with sponsoring agencies. Students learn to develop social science hypotheses based upon literature reviews in their topic areas and apply concepts drawn from social psychology, anthropology, sociology, economics and other areas as appropriate. Students make presentations, write an organized project proposal, and develop a communication model for reporting their project findings.

SS 2400. METHODS, MODELING, AND ANALYSIS IN SOCIAL SCIENCE.

Cat. II

What is the process by which a hypothesis about human behavior gets supported or rejected? This course represents a review of the methodological tools of social and behavioral science. Topics to be covered include experimental design and ethical issues specific to behavioral research with human subjects, the use of statistical and simulation modeling in the interpretation of behavioral phenomena, and methods for statistical inference in compiling evidence for or against a hypothesis.

Recommended background: PSY 1400 and either PSY 1401 or PSY 1402.

This course will be offered in 2013-14 and in alternate years thereafter.

SOCIETY/TECHNOLOGY STUDIES (STS)

STS 1207. INTRODUCTION TO THE PSYCHO-SOCIOLOGY OF SCIENCE.

Cat. II

This course will describe how traditional issues addressed in the Sociology of Science dealing with science as an institution, social controversies involving science, priority disputes within science and process of scientific discovery are illuminated by studies using measures borrowed from psychology. Examples will involve measures of cognitive style, personality and openness to innovation. The scientific pipeline that runs through the science programs in the educational system and the experience of women as students and as practicing scientists will be addressed as a science and society equity issue. Problems balancing the roles of the scientist as expert and concerned citizen in a democratic but technological society will also be addressed. This course works equally well as a second course after PSY 1402, Social Psychology, or a first course in Social Science.

This course will be offered in 2014-15 and in alternating years thereafter.

STS 2208. THE SOCIETY - TECHNOLOGY DEBATE.

Cat. II

A course which considers what one means when they say that we live in a technological society, focusing on the characteristics of technology that humanistic critics find problematic or objectionable. In the course of the analysis, the nature of technology, its connection to scientific advance, as well as its relationship to the state, and the social role of scientists and technologists will be considered. Special attention is given to the behavior of experts in scientific and technological controversies, and to the debate about the "technological mentality" said to pervade western societies. Utopian, Dystopian and Marxist interpretations of where technological development is taking us will be examined in an effort to understand the major themes in the larger debate about the social impact of technology. Computer science majors can take this course in place of CS 3043 if they write a term paper on a computer-related topic.

Recommended background: SOC 1202.

This course will be offered in 2014-15 and in alternating years thereafter.

Graduate System Dynamics Courses of Interest to Undergraduates

SD 550. SYSTEM DYNAMICS FOUNDATION: MANAGING COMPLEXITY.

Why do some businesses grow while others stagnate or decline? What causes oscillation and amplification - the so called "bullwhip" — in supply chains? Why do large scale projects so commonly over overrun their budgets and schedules? This course explores the counter-intuitive dynamics of complex organizations and how managers can make the difference between success and failure. Students learn how even small changes in organizational structure can produce dramatic changes in organizational behavior. Real cases and computer simulation modeling combine for an in-depth examination of the feedback concept in complex systems. Topics include: Supply chain dynamics, project dynamics, commodity cycles, new product diffusion, and business growth and decline. The emphasis throughout is on the unifying concepts of system dynamics. Pre-requisites: None

SD 551. MODELING AND EXPERIMENTAL ANALYSIS OF COMPLEX PROBLEMS.

This course deals with the hands on detail related to analysis of complex problems and design of policy for change through building models and experimenting with them. Topics covered include: slicing complex problems and constructing reference modes; going from a dynamic hypothesis to a formal model and organization of complex models; specification of parameters and graphical functions; experimentations for model understanding, confidence building, policy design and policy implementation. Modeling examples will draw largely from public policy agendas. Pre-requisites: SD 550

SD 552. SYSTEM DYNAMICS FOR INSIGHT.

The objective of this course is to help students appreciate and master system dynamics' unique way of using of computer simulation models. The course provides tools and approaches for building and learning from models. The course covers the use of molecules of system dynamics structure to increase model building speed and reliability. In addition, the course covers recently developed eigenvalue-based techniques for analyzing models as well as more traditional approaches. Pre-requisites: SD 550 and SD 551

SD 553. MODEL ANALYSIS AND EVALUATION TECHNIQUES.

This course focuses on analysis of models rather than conceptualization and model development. It provides techniques for exercising models, improving their quality and gaining added insights into what models have to say about a problem. Five major topics are covered: Use of subscripts, achieving and testing for robustness, use of numerical data, sensitivity analysis, and optimization/calibration of models. The Subscripts discussion provides techniques for dealing with detail complexity by changing model equations but not adding additional feedback structure. Robust models are achieved by using good individual equation formulations and making sure that they work together well though automated behavioral experiments. Data, especially time series data, are fundamental to finding and fixing shortcomings in model formulations. Sensitivity simulations expose the full range of behavior that a model can exhibit. Finally, the biggest section, dealing with optimization and calibration of models develops techniques for both testing models against data and developing policies to achieve specified goals. Though a number of statistical issues are

touched upon during the course, only a basic knowledge of statistics and statistical hypothesis testing is required. Pre-requisites: SD 550 and SD 551, or permission of the instructor

SD 554. REAL WORLD SYSTEM DYNAMICS.

In this course students tackle real-world issues working with real managers on their most pressing concerns. Many students choose to work on issues in their own organizations. Other students have select from a number of proposals put forward by managers from a variety of companies seeking a system dynamics approach to important issues. Students experience the joys (and frustrations) of helping people figure out how to better manage their organizations via system dynamics. Accordingly the course covers two important areas: Consulting (i.e. helping managers) and the system dynamics standard method - a sequence of steps leading from a fuzzy "issue area" through increasing clarity and ultimately to solution recommendations. The course provides clear project pacing and lots of support from the instructors and fellow students. It is recommended that students take this course toward the end of their system dynamics coursework as it provides a natural transition from course work to system dynamics practice. Pre-requisites: SD 550 and SD 551

SD 556. STRATEGIC MODELING AND BUSINESS DYNAMICS.

The performance of firms and industries over time rarely unfolds in the way management teams expect or intend. The purpose of strategic modeling and business dynamics is to investigate dynamic complexity by better understanding how the parts of an enterprise operate, fit together and interact. By modeling and simulating the relationships among the parts we can anticipate potential problems, avoid strategic pitfalls and take steps to improve performance. We study a variety of business applications covering topics such as cyclicalities in manufacturing, market growth and capital investment. The models are deliberately small and concise so their structure and formulations can be presented in full and used to illustrate principles of model conceptualization, equation formulation and simulation analysis. We also review some larger models that arose from real-world applications including airlines, the oil industry, the chemicals industry and fast moving consumer goods. Students work with selected business policy problems based on generic structures discussed in the lessons.

Prerequisite: SD550 System Dynamics Foundation: Managing Complexity

SD 557. LATENT STRUCTURES, UNINTENDED CONSEQUENCES, AND PUBLIC POLICY.

This course addresses policy resilience and unintended consequences arising out of actions that are not cognizant of the latent structure causing the problem. An attempt is made to identify the generic systems describing such latent structures. The latent structures discussed include a selection from capacity constraining and capacity enabling systems, resource allocation, and economic cycles of various periodicities. Problems discussed in lessons include pests, gang violence, terrorism, political instability, professional competence in organizations, urban decay, and economic growth and recessions. Students work with selected public policy problems relevant to the generic latent structures discussed in the course.

Pre-requisites: SD550 System Dynamics Foundation: Managing Complexity, SD551 Modeling and Experimental Analysis of Complex Problems

SD 558. INTRODUCTION TO AGENT-BASED MODELING.

The purpose of this course is to provide students with an introduction to the field of agent-based computer simulation modeling in the social sciences. The course begins with an outline of the history of the field, as well as of the similarities and differences between agent-based computer simulation modeling and system dynamics computer simulation modeling. An important goal of the course is to provide students with guidelines for deciding when it is preferable to apply agent-based modeling, and when it is preferable to apply system dynamics modeling, to a particular problem. Through a series of example models and homework exercises students are introduced to the software that is used in the course. Generally speaking, as the course progresses students will be introduced to increasingly complicated agent-based models and exercises so that their modeling skills will grow. The goal is to increase students' modeling skills so that they will eventually be able to create their own agent-based models from scratch. The remainder of the course is devoted to examining models of socioeconomic phenomena that reside within two broad categories of agent-based models: cellular automata models and multi-agent models. Along the way the cross-category, cross-disciplinary, principles of agent-based modeling (microlevel agents following simple rules leading to macro-level complexity, adaptation, evolving structure, emergence, non-ergodicity) are emphasized.

SD 560. STRATEGY DYNAMICS.

This course provides a rigorous set of frameworks for designing a practical path to improve performance, both in business and non-commercial organisations. The method builds on existing strategy concepts, but moves substantially beyond them, by using the system dynamics method to understand and direct performance through time. Topics covered include: Strategy, performance and resources; Resources and accumulation; The 'Strategic Architecture'; Resource Development; Rivalry and the Dynamics of Competition; Strategy, Policy and Information Feedback; Resource Attributes; Intangible Resources; Strategy, Capabilities and Organization; Industry Dynamics and Scenarios. Case studies and models are assigned to students for analysis.

SD 561. ENVIRONMENTAL DYNAMICS.

Environmental Dynamics introduces the system dynamics students to the application in environmental systems. The course materials include the book *Modeling the Environment*, a supporting website, lectures and the corresponding power point files. Students learn system dynamics with examples implemented with the Stella software. The course includes a variety of small models and case applications to water shed management, salmon restoration, and incentives for electric vehicles to reduce urban air pollution. The students conclude the course with a class project to improve one of the models from the book *Modeling the Environment*. The improvements may be implemented with either the Stella or the Vensim software. Pre-requisites: SD 550

SD 562. PROJECT DYNAMICS.

This course will introduce students to the fundamental dynamics that drive project performance, including the rework cycle, feedback effects, and inter-phase "knock-on" effects. Topics covered include dynamic project problems and their causes: the rework cycle and feedback effects, knock-on effects between project phases; Modeling the dynamics: feedback effects, schedule pressure and staffing, schedule changes, inter-phase dependencies and precedence; Strategic Project management: Project Planning, Project Preparation, Risk management, Project adaptation and execution. Cross project learning; Multi-project issues. A simple project model will be created, and used in assignments to illustrate the principles of "strategic project management." Case examples of different applications will be discussed. Pre-requisites: SD 550

SD 565. MACROECONOMIC DYNAMICS.

There are three parts to this course. The first acquaints a student with dynamic macroeconomic data and the stylized facts seen in most macroeconomic systems. Characteristics of the data related to economic growth, economic cycles, and the interactions between economic growth and economic cycles that are seen as particularly important when viewed through the lens of system dynamics, will be emphasized. The second acquaints a student with the basics of macroeconomic growth and business cycle theory. This is accomplished by presenting well-known models of economic growth and instability, from both the orthodox and heterodox perspectives, via system dynamics. The third part attempts to enhance a student's ability to build and critique dynamic macroeconomic models by addressing such topics as the translation of difference and differential equation models into their equivalent system dynamics representation, fitting system dynamics models to macroeconomic data, and evaluating (formally and informally) a model's validity for the purpose of theory selection. Pre-requisites: SD 550

SS 590. SPECIAL TOPICS IN SYSTEM DYNAMICS.

(credit as specified)

Individual or group studies on any topic relating to social science and policy studies selected by the student and approved by the faculty member who supervises the work.

GRADES

DISTRIBUTION OF GRADES

Academic grades of undergraduate students may be released to parent(s) of a student claimed as a dependent for tax purposes. WPI presumes that all undergraduate students are dependents of their parent(s) unless they file a Declaration of Independent Status petition form with the Registrar's Office. These forms are available in the Registrar's Office. After the Registrar's Office receives a Declaration of Independent Status petition form from an undergraduate student, the Office will not release the student's academic grades to the parent(s) of such student until such time as the student rescinds their Declaration, in writing filed with the Registrar's Office, or his/her parent(s) provide acceptable proof of tax-dependent status to the Registrar's Office.

GRADING SYSTEM

Projects: The following term grades are possible: A, B, C, SP (Satisfactory Progress), NAC (Not Acceptable) and NR (No record).

Courses: The following grades are possible: A, B, C, NR, and I (Incomplete). An instructor may also assign an "I" in an Independent Study course. AT (attended) is used to denote participation in seminars or college-sponsored programs.

Students such as Consortium (CO), nondegree-seeking students, and Graduate students will receive traditional A, B, C, D, F, Withdrawal and Pass/Fail grades.

GRADES FOR COMPLETION OF DEGREE REQUIREMENTS

The overall evaluation of degree requirements (for the MQP, the IQP and the Humanities and Arts Requirement) will be graded in the student's respective grade system. The transcript will contain an abstract describing the content of the completed project.

NO RECORD (NR)

The NR (No Record) grade is assigned by a faculty member for course or project work for which credit has not been earned. This grade applies to PLAN students (admitted, degree-seeking) only. The NR grade does not appear on the students' transcripts or grade reports, nor is it used in the calculation of satisfactory academic progress.

INCOMPLETE (I)

An I grade, when assigned, will be changed to NR after one term unless extended in writing by the instructor to the Registrar's Office. The I grade is not assigned for Qualifying Projects.

SATISFACTORY PROGRESS (SP)

In project work (IQP, MQP only) extending beyond one term for which a grade is not yet assigned, an interim grade of SP (Satisfactory Progress) may be used on grade sheets. In such cases, the SP evaluation will count as units earned toward meeting the 15-unit rule, the distribution requirements, and the minimum standards for satisfactory academic progress. SP grades remain on the transcript until changed to the final grade as submitted on the Completion of Degree Requirement Form or through the grade change form procedure.

OTHER GRADES

A ? or Q signifies a grade that has not been submitted.

PROJECT GRADING

The Faculty of WPI have endorsed the following grading guidelines for project activity:

1. Each term a student is registered for a project, the student receives a grade reflecting judgment of accomplishments for that term.
2. Upon completion of the project, students will receive an overall project grade. It is important to note that this grade reflects not only the final products of the project (e.g., results, reports, etc.), but also the process by which they were attained. No amount of last-minute effort should turn a mediocre project effort into an A.
3. The available grades and their interpretations are as follows:
 - **A:** a grade denoting a consistently excellent effort, and attaining the stated project goals.
 - **B:** a grade denoting a consistently good effort, and attaining the stated project goals.
 - **C:** a grade denoting an acceptable effort, and partially attaining the stated project goals.
 - **SP:** a grade denoting an effort sufficient for the granting of the credit for which the student is registered. This grade provides students with no feedback, and its use is discouraged except for circumstances in which the faculty member is unable to judge the quality of the work (yet can still determine that the granting of credit is appropriate).
 - **NAC:** a grade denoting an effort unacceptable for the credit for which the student is registered. Note that this grade is entered into the student's transcript.
 - **NR:** a grade denoting an effort insufficient for the credit for which the student is registered. This grade is appropriate when the project has not proceeded due to circumstances beyond the control of the student, or for project extensions which do not represent the full amount of credit for which the student is registered.
4. The results of a project should be such that an outside reviewer would reasonably deem the project as being worthy of the credit and grade given, based on evidence such as the project report.
5. In light of the above grading criteria, it is strongly suggested that a formal project proposal or contract be developed early in the project activity, so that all participants in the activity have a clear understanding of the project goals, and advisor and student expectations.

CUMULATIVE POINT AVERAGE

WPI does not maintain a Cumulative Grade Point Average for undergraduate students. A student who needs a cumulative point average for external use may apply to the Registrar and receive a numerical equivalent. This information is usually provided only for students applying to graduate or professional schools when the application process requires a translation. Cumulative point averages will not be printed on student's transcripts nor shall class rankings be developed from them.

When requested by the student, the numerical equivalent of the cumulative point average will be based on a point assignment of A = 4.0, B = 3.0, C = 2.0 while DIST and AC grades will be 4.0 and 2.75 respectively.

DEAN'S LIST

In 2008, the faculty voted to reintroduce a Dean's List in order to celebrate the exceptional work of our students in every class every year. As WPI has a "non-traditional" grading system and does not compute a traditional Grade Point Average, the Dean's List is calculated twice a year (A/B Term) and (C/D Term) and determined by meeting one of the following criterion:

To be named to the Dean's List, a student must achieve one of the following thresholds:

- 4/3 or more A and 1/3 or more B, or
- 3/2 or more A and 1/6 or more B, or
- 4/3 A and 1/3 SP, or
- 3/2 A and 1/6 SP, or
- 5/3 or more A.

GRADE APPEAL AND GRADE CHANGE POLICY

The purpose of the Grade Appeal Policy is to provide the student with a safeguard against receiving an unfair final grade, while respecting the academic responsibility of the instructor. Thus, this procedure recognizes that,

- Every student has a right to receive a grade assigned upon a fair and unprejudiced evaluation based on a method that is neither arbitrary nor capricious; and,
- Instructors have the right to assign a grade based on any method that is professionally acceptable, submitted in writing to all students, and applied equally.

Instructors have the responsibility to provide careful evaluation and timely assignment of appropriate grades. Course and project grading methods should be explained to students at the beginning of the term. WPI presumes that the judgment of the instructor of record is authoritative, and the final grades assigned are correct.

A grade appeal shall be confined to charges of unfair action toward an individual student and may not involve a challenge of an instructor's grading standard. A student has a right to expect thoughtful and clearly defined approaches to course and project grading, but it must be recognized that varied standards and individual approaches to grading are valid. The grade appeal considers whether a grade was determined in a fair and appropriate manner; it does not attempt to grade or re-grade individual assignments or projects. It is incumbent on the student to substantiate the claim that his or her final grade represents unfair treatment, compared to the standard applied to other students. Only the final grade in a course or project may be appealed. In the absence of compelling reasons, such as clerical error, prejudice, or capriciousness, the grade assigned by the instructor of record is to be considered final.

In a grade appeal, only arbitrariness, prejudice, and/or error will be considered as legitimate grounds for an appeal.

Arbitrariness: The grade awarded represents such a substantial departure from accepted academic norms as to demonstrate that the instructor did not actually exercise professional judgment.

Prejudice: The grade awarded was motivated by ill will, and is not indicative of the student's academic performance.

Error: The instructor made a mistake in fact.

This grade appeal procedure applies only when a student initiates a grade appeal and not when the instructor decides to change a grade on his or her own initiative. This procedure does not cover instances where students have been assigned grades based on academic dishonesty or academic misconduct, which are included in WPI's Academic Honesty Policy. Also excluded from this procedure are grade appeals alleging discrimination, harassment or retaliation in violation of WPI's Sexual Harassment Policy, which shall be referred to the appropriate office at WPI as required by law and by WPI policy.

The Grade Appeal Procedure strives to resolve a disagreement between student and instructor concerning the assignment of a grade in an expeditious and collegial manner. The intent is to provide a mechanism for the informal discussion of differences of opinion, and for the formal adjudication by faculty only when necessary. In all instances, students who believe that an appropriate grade has not been assigned must first seek to resolve the matter informally with the instructor of record. If the matter cannot be resolved informally, the student must present his or her case to the Faculty Review Committee before the end of the second week of the term after the disputed grade is received (D term grades may be appealed the following A term). Any exceptions to this deadline for submission of appeal can only be made by the Office of the Provost.

STUDENT GRADE APPEAL PROCEDURE

Students must complete Steps 1-3 of the Appeal Procedure within the first two weeks of the term after the disputed grade is received.

1. A student who wishes to question a grade must discuss the matter first with the instructor of record at the start of the next academic term after receiving the grade. (D term grades can be discussed at the start of the following A term.) In most cases, the discussion between the student and the instructor should suffice and the matter will not need to be carried further. The student should be aware that the only valid basis for grade appeal beyond Step One is to establish that an instructor assigned a grade that was arbitrary, prejudiced, or in error.
2. If the student's concerns remain unresolved after the discussion with the instructor, the student may submit a written request to meet with the appropriate Department Head, after speaking with the instructor. For a grade in a course, independent study or Major Qualifying Project (MQP), the appropriate person is the instructor's Department Head. For a grade in an Interactive Qualifying Project (IQP), the appropriate person is the Dean of the Interdisciplinary and Global Studies Division (IGSD). If the instructor of record is a Department Head or the Dean of the IGSD, then the student should request to meet with the Dean of Undergraduate Studies, who will serve as the appropriate Department Head in this step. The appropriate Department Head will meet with the student, and, if he or she believes that the complaint may have merit, with the instructor. After consultation with the Department Head, the instructor may choose to let the grade remain, to change a course grade, or

to petition the Committee on Academic Operations to change a grade for a Degree Requirement (MQP, IQP, HUA). The Department Head will communicate the result of these discussions to the student.

3. If the matter remains unresolved after Step Two, the student should submit a written request before the end of the second week of the term after the disputed grade is received to the Provost's Office to request an *ad hoc* Faculty Committee for Appeal of a Grade. The Dean of Undergraduate Studies will meet with the student, and will ask the Faculty Review Committee to appoint the *ad hoc* Committee for Appeal of a Grade. The FRC, in consultation with the Dean of Undergraduate Studies, will select the members of the *ad hoc* committee. The Chair of the FRC will convene the *ad hoc* committee and serve as its non-voting chair. The *ad hoc* committee for appeal of a grade in a course, independent study or MQP will be composed of three faculty members chosen in the instructor's department or in closely allied fields. The *ad hoc* committee for appeal of a grade in an IQP will be composed of the instructor of record's Department Head and two faculty members who are experienced advisors of IQPs chosen from any department. Appointees to the *ad hoc* committee must not have any apparent conflicts of interest with the instructor of record (which might include but are not limited to frequent co-advising or research collaboration). The committee would examine available written information on the dispute, would be available for meetings with the student and with the instructor, and would meet with others as it sees fit.
4. Through its inquiries and deliberations, the *ad hoc* committee is charged to determine whether the grade was assigned in a fair and appropriate manner, or whether clear and convincing evidence of unfair treatment such as arbitrariness, prejudice, and/or error might justify changing the grade. The *ad hoc* committee will make its decisions based on a majority vote. If the committee concludes that the grade was assigned in a fair and appropriate manner, the *ad hoc* committee will report its conclusion in writing to the student and instructor and the matter will be considered closed. If the *ad hoc* faculty committee determines that compelling reasons exist for changing the grade, it would request that the instructor make the change, providing the instructor with a written explanation of its reasons. Should the instructor decline, he or she must provide a written explanation for refusing.
5. The *ad hoc* faculty committee, after considering the instructor's explanation and upon again concluding that it would be unjust to allow the original grade to stand, will then determine what grade is to be assigned. The new grade may be higher than, the same as, or lower than the original grade. Having made this determination, the three members of the committee will sign the grade change form and transmit it to the Registrar. The instructor and student will be advised of the new grade. Under no circumstances may persons other than the original faculty member or the review committee change a grade. Should the *ad hoc* faculty committee feel that the instructor's written explanation justifies the original grade, the *ad hoc* committee will report this in writing to the student and instructor and the matter will be closed.

FACULTY GRADE CHANGE PROCEDURE

The Student Grade Appeal Procedure affirms the principle that grades should be considered final. The principle that grades for courses or projects should be considered final does not excuse an instructor from the responsibility to explain his or her grading standards to students and to assign grades in a fair and appropriate manner. The appeal procedure also provides an instructor with the opportunity to change a grade for a course or project on his or her own initiative. The appeal procedure recognizes that errors can be made and that an instructor who decides that it would be unfair to allow a final grade to stand due to error, prejudice or arbitrariness may request a change of grade for a course or project without the formation of an *ad hoc* committee. An instructor may request a grade change in one of two ways. First, for courses, an instructor may submit a course grade change in writing to the Registrar at any time prior to a student's graduation. Second, for Degree Requirements (MQP, IQP), an instructor must submit a petition to the Committee on Academic Operations (CAO) to change the grade.

TRANSFER CREDIT

TRANSFER CREDIT BEFORE MATRICULATION TO WPI

After a student has been accepted and final transcripts received, the Office of Admissions coordinates the formal evaluation of credit accepted towards a WPI degree. Courses taken at regionally accredited post-secondary institutions that are comparable to courses offered at WPI will be reviewed for course content and level by the WPI department offering the comparable course. Only those courses in which the transfer student received a grade of C or better will be evaluated for possible transfer credit. Please note vocational, correspondence, pre-college or review courses are not transferable. Also, non-credit CEU courses, adult enrichment or refresher courses, and CLEP examinations are not recognized for transfer credit.

TRANSFERING CREDIT AFTER MATRICULATION TO WPI

If you are currently a WPI student who wishes to take courses at a regionally accredited post-secondary institution, you must obtain a WPI Transfer Credit Authorization form from the Registrar's Office. This form and the course description must be taken to the WPI department head or transfer faculty approved by the department head for approval **before** the course is taken. On the form, the department head specifies a minimum grade for transfer. This minimum grade depends on the institution at which the course is taken and how critical the course is to the department. Please note, most departments do **not** accept on-line courses for transfer credit. Confirm this with the relevant department before registering and completing any on-line courses. Courses that have not been pre-approved may not receive transfer credit. The completed form must be filed in the Registrar's Office before taking the course. After successful completion of the course, an official transcript should be sent to WPI. Students can check the web for posting of credit. Please note vocational, correspondence, pre-college or review courses are not transferable. Also, noncredit CEU courses, adult enrichment or refresher courses, and CLEP examinations are not recognized for transfer credit.

TRANSFERRING CONSORTIUM COURSES

Courses taken through the consortium do not need to be transferred into WPI. Courses will automatically be part of the WPI transcript. However, if you are taking the course through the consortium to fulfill a WPI distribution requirement, you should check with the Registrar's Office to see if the course has been pre-approved to satisfy the requirement. If not, you will need approval from the relevant department head before taking the course.

To apply for approval of a consortium course to satisfy a specific WPI distribution requirement, a student must obtain a WPI Transfer Credit Authorization form from the Registrar's Office. This form and the course description must be taken to the WPI department head for approval before the course is taken. The WPI department head decides whether the proposed course meets the department distribution requirement. If it does, the department head specifies on the form a minimum grade for satisfying the distribution requirement. This minimum grade depends on the institution at which the course is taken and how critical the course is within the department. Courses that have not been pre-approved may receive WPI elective credit. The complete form must be filed in the Registrar's Office before taking the course.

GRADUATION WITH HONORS

For all degree candidate students graduating from WPI after May 1, 2011, graduation honors will be determined as follows:

Graduation With High Distinction

An *A* or *DIST* grade on any *four* of the following:

- MQP
- IQP
- Inquiry Seminar/Practicum
- Eight units of work registered at WPI (exclusive of PE and of the MQP, IQP and the Inquiry Seminar/Practicum component of the Humanities and Arts Requirement).

Graduation With Distinction

A grade of *A* or *DIST* on the following criteria:

- MQP
- IQP
- Inquiry Seminar/Practicum
- Four units of work registered at WPI (exclusive of PE and of the MQP, IQP and the Inquiry Seminar/Practicum component of the Humanities and Arts Requirement).

or

a grade of *A* or *DIST* on the following criteria:

- Two of the three projects: MQP, IQP and the Inquiry Seminar/Practicum
 - Six units of work registered at WPI (exclusive of PE and of the MQP, IQP and the Inquiry Seminar/Practicum component of the Humanities and Arts Requirement).
-

For all degree candidate students graduating from WPI from May 1, 1986, to June 1, 2010, graduation honors will be determined as follows:

Graduation with High Distinction

An *A* or *DIST* grade on any four of the following:

- MQP
- IQP
- Inquiry Seminar/Practicum
- Six units of work registered at WPI (exclusive of PE and of the MQP, IQP, or the Inquiry Seminar/Practicum component of the Humanities and Arts Requirement).

Graduation with Distinction

An *A* or *DIST* grade on any three of the above.

HONORS FOR DOUBLE MAJORS

If a student completes two majors, the student is awarded a degree with "Distinction" or "High Distinction" if the student meets the criteria above in either or both majors; if both awards are received, the degree is awarded with "High Distinction."

COMMENCEMENT

COMMENCEMENT POLICY

The policy for allowing certain undergraduate students who have not completed all degree requirements to participate in Commencement exercises is:

1. Undergraduate students who have not met all degree requirements will be eligible to participate in Commencement exercises only if *all of the following* are true:
 - a. At the end of D term, the student is within 1/3 unit of one activity in all requirements for graduation.
 - b. The student has completed at least 2 of the 3 WPI Project Requirements (Humanities and Arts Requirement, IQP, and MQP).
2. Undergraduate students who meet these conditions will be permitted to participate in Commencement exercises but will not receive their diploma. The names of such students will **not** be included in the Commencement program. The actual degree will be conferred only after all degree requirements have been completed.
3. All WPI undergraduate students will be notified of these policies and procedures each B term.
4. Undergraduate students seeking an exception to this policy have the right to petition the Committee on Academic Operations for a waiver due to extenuating circumstances. Petitions must be received no later than noon (12 p.m.) the Wednesday before Commencement Day.

A/C TERM DEGREE COMPLETION

Students completing 100% of WPI graduation requirements by the end of A-term or C-term will be eligible for a 50% tuition adjustment for the semester of completion. Eligible students must complete the form available in the Registrar's Office and submit by the end of B-term (for C-term completion) or D-term (for A-term completion). Students/responsible parties will be billed for the full semester and then tuition charges will be reduced by 50% once the graduation requirements have

been signed off and the student's withdrawal has been officially processed. Qualified students receiving financial aid from WPI will retain 50% of any WPI scholarship, and their loan eligibility will be reviewed on an individual basis. Students living in WPI housing will still be financially responsible for paying the full semester's worth of room and board.

DESIGNATION OF MAJOR AREA OF STUDY

Designation of a student's major area of study on the transcript is determined by his or her completion of published academic activity distribution requirements, as well as by the Major Qualifying Project. The authority and responsibility of certification of the disciplinary or interdisciplinary area will lie with the appropriate departmental or IGSD Program Review Committee (PRC) in consultation with the student and his or her academic advisor.

For examples of major areas of study, please see page 8.

DOUBLE MAJOR

DISTRIBUTION REQUIREMENTS

The distribution requirements of each major must be met, but requirements common to both majors may have to be met only once. A minimum of three units of qualifying project work is thus required for fulfillment of the project portion of the double major requirements: one unit in each of the two major areas of study, and one unit of an IQP. See page 18 for details and options.

For students wishing to pursue double majors not involving social science, the program audit for each intended major must be completed and certified by the review committee of each department involved. Academic activities appropriate to both majors may be counted in both majors.

For the policy in the special situation of double majors involving the social sciences, see page 107.

If a student wishes to complete two Interdisciplinary (individually designed) Majors Programs, the double major must be proposed in a single Educational Program Proposal, which must be approved by the student's Program Advisory Committee for each major. The Committees shall ensure that the majors are substantially nonoverlapping.

If a student's double major includes an Interdisciplinary (individually designed) Major Program, the double majors must be described in the Educational Program Proposal for the Interdisciplinary Major.

DESIGNATION OF CLASS YEAR

Class year will normally be designated as year of matriculation plus four with the additional requirement that the accumulation of 30/3 units is necessary for fourth-year status, 19/3 units for third-year status, and 8/3 units for second-year status. The class year of transfer students will be determined on an individual basis. Class year designations will be reviewed at the end of Term E each year and changed if the credit accumulation does not meet the above specifications. After Term E, students may petition to be redesignated in their original class if they meet the minimum unit requirements.

ACADEMIC HONESTY POLICY

Academic honesty is a fundamental principle of learning and a necessary foundation for all academic institutions, particularly those dedicated to independent project-based education, such as WPI. Violations of the principle deny the violators an opportunity to obtain confident command of the material they are credited with knowing, cheat their classmates out of deserved rewards and recognition, debase the institution, and demean the degree that it awards. It is, therefore, a matter of great and mutual concern to all members of the WPI community that a concerted effort be made to maintain high standards of integrity, both to protect the value of the educational process in which we are engaged and to maintain the credibility of the institution.

DEFINITION

Individual integrity is vital to the academic environment because education involves the search for and acquisition of knowledge and understanding, which are, in themselves, intangible. Evaluation of each student's level of knowledge and understanding is a vital part of the teaching process, and requires tangible measures such as reports, examinations, and homework. Any act that interferes with the process of evaluation by misrepresentation of the relation between the work being evaluated (or the resulting evaluation) and the student's actual state of knowledge is an act of academic dishonesty. The following acts are examples of academic dishonesty at WPI:

Fabrication

Examples:

- Altering grades or other official records
- Changing exam solutions after the fact
- Inventing or changing laboratory data
- Falsifying research
- Inventing sources
- Sabotage of another student's work or academic record

Plagiarism

Examples:

- Misrepresenting the work of another as one's own
- Inaccurately or inadequately citing sources including those from the Internet

Cheating

Examples:

- Use of purchased term papers
- Copying on exams, homework, or take-home exams
- Use of unauthorized materials or sources of information such as "cheat sheet," pre-programmed calculator
- Assistance of another person in cases where prohibited

Facilitation

Examples:

- Sharing test questions or answers from an exam with another student
- Letting another student copy a solution to a homework problem, exam, or lab
- Taking an exam for another student
- Assistance in any act of academic dishonesty of another student

RESPONSIBILITIES OF FACULTY MEMBERS AND STUDENTS

Faculty members should outline their policies concerning evaluation procedures and their expectations pertaining to academic integrity at the beginning of each course. Faculty must ensure that student performance is judged solely on the basis of academic work in courses and projects. Because of the differences in disciplines and the type of work involved, faculty interpretation regarding what constitutes academic dishonesty may vary across campus. Since project-based education places a strong emphasis on group work, faculty and students should be particularly attentive to the distinction between group work and individual performance expectations. Faculty and students are responsible for knowing and understanding WPI's policy and procedure for dealing with academic dishonesty. Faculty are encouraged to implement measures designed to minimize or prevent academic dishonesty.

PROCEDURES

The WPI faculty and administration have developed a set of procedures designed to ensure uniform (and fair) treatment of undergraduate or graduate students suspected of academic dishonesty. Students or others who suspect a faculty member of professional dishonesty should consult the academic department head or the provost.

- Faculty shall report to the department chair any suspected act of academic dishonesty.
- The chair shall review cases referred to him/her to determine if there is reason for believing that academic dishonesty may be involved.
- Faculty shall allow the student to continue in the course without prejudice, pending resolution of the case.
- The chair or instructor shall check with the dean or associate dean of students to determine if the student has any record of prior offenses involving academic dishonesty.
- The chair or instructor shall consult with the student involved. If the act of academic dishonesty is admitted and is the first violation of that nature, the chair or instructor may resolve the complaint within the department, provided the penalty is accepted by the student in writing. The maximum penalty that can be applied at the department level is dismissal from a course or a project without credit. In all cases, a signed, written report on the matter, including the action taken, shall be sent to the Dean of Students Office and to the student's Academic Advisor.
- For the second and subsequent violations, the case shall be submitted to the Campus Hearing Board for resolution.
- The Campus Hearing Board shall hear the allegations, following standard procedures for disciplinary hearings established by WPI. The board may impose normal disciplinary sanctions and may recommend loss of any credit or grade for the course or project. If a student is found not responsible on a complaint of academic dishonesty, he/she may not be failed or penalized by the instructor on the grounds of dishonesty. The instructor shall assign a grade based on his or her assessment of the student's mastery of the material being evaluated.

- Disciplinary records for any act of academic dishonesty shall be retained in the Dean of Students Office for two years from the date of graduation or withdrawal from WPI, except when the sanction includes suspension or expulsion. In cases resulting in suspension or expulsion from WPI, disciplinary records shall be kept in perpetuity. Records for cases that are pending completion of the hearing and/or the sanction shall be kept in perpetuity. Judicial records are kept separate from a student's academic records. A student's judicial record may be shared internally as appropriate to determine if a past record exists. Records shall be available to prospective employers and other authorized individuals, in accordance with federal regulations that require written permission from the student involved.

GUIDELINES FOR THE DETERMINATION OF SATISFACTORY ACADEMIC PROGRESS, ACADEMIC WARNING, ACADEMIC PROBATION AND ACADEMIC SUSPENSION

SATISFACTORY ACADEMIC PROGRESS

In order to assist the student, parents, and the academic advisor in determining whether a student is making academic progress, WPI has adopted the following guidelines.

To maintain Satisfactory Academic Progress, a student must:

1. Complete at least 4/3 units of academic work for the fall semester (A and B terms); and
2. Complete at least 4/3 units of academic work for the spring semester (C and D terms) AND at least 8/3 units of academic work in the past 4 terms (typically A-D terms).

Note: Air Force Aerospace Studies (AS), Military Science (ML), and Physical Education (PE) courses are not included in any evaluation of Academic Progress.

Academic Progress is evaluated at the end of each semester and any student who does not maintain Satisfactory Academic Progress will move down one level of academic standing (to warning, from warning to probation, or from probation to suspension). First-year students who earn no academic credit (see note above) during their first two terms at WPI will be placed on Academic Suspension. Thereafter, any student who earns no academic credit in a semester will move down two levels in academic standing.

ACADEMIC WARNING

Each student's academic record will be reviewed at the conclusion of terms B and D according to the guidelines above. If a student's performance falls short of either guideline 1 or 2, the student, parent and academic advisor will be notified that the student is not making satisfactory progress. This notification will place the student on Academic Warning for two terms. At this time, the student is urged, with the help of the advisor, to identify the nature of the academic difficulty and to formulate a course of action for overcoming the difficulty. Students on Academic Warning are not eligible to apply to the Global Perspective Program.

ACADEMIC PROBATION

During the next review of academic progress, should the student fail, once again, to maintain satisfactory academic progress, the student, parent and academic advisor will be notified. This notification will place the student on Academic Probation for two terms. Academic Probation will prevent the student from receiving financial aid, will result in loss of eligibility for team sports, will prevent the student from obtaining undergraduate employment in the Co-op Program and will prevent participation in the Global Perspective Program.

ACADEMIC SUSPENSION

Should a student on Academic Probation fail to make satisfactory academic progress during the next review period, the student will be *suspended* from WPI. The notification will prevent the student from enrolling as a full-time student *or* a part-time student for at least the next two terms. Subsequent readmission is subject to approval (with possible conditions) of a petition through the Registrar to the Committee on Academic Operations (CAO). As a general rule, a student readmitted after suspension will be placed on an Academic Probation status.

New students (first year or transfer) who fail to obtain academic credit for the first two terms shall be placed on Academic Suspension and not allowed to enroll for the following two terms. To apply for readmission, a student must submit a petition to the Committee on Academic Operations (CAO).

IMPROVEMENT IN STATUS

Students on Academic Warning or Academic Probation have the opportunity to improve their status by progressing through the levels in reverse order. If a student on Academic Probation satisfactorily meets the guidelines at the end of the next review period, he or she will be moved to the list of students on Academic Warning. A student on Academic Warning would be moved back to Satisfactory Academic Progress status.

SUMMER REVIEW PERIOD

An exception to the guidelines stated above can occur when a student registers for Term E. At the conclusion of Term E, a review will be conducted at the student's request which will include E-term and the previous four terms. If the student has completed 10/3 units acceptable work, the student's academic progress status will improve. Thus, a student on Warning status after the Term D review will start terms A and B on Satisfactory Academic Progress. A student placed on Academic Probation after the Term D review will be on Warning status for terms A and B.

SUMMER BRIDGE PROGRAM

Students who finish the academic year on Academic Warning or Academic Probation status, but who have passed at least 2 units of academic work during the previous four terms, are eligible to participate in the Summer Bridge Program. Students who participate in the program enroll in Term E for two courses and also take a four-week study skills program. Successful completion of the courses and the study skills program will result in the academic status rising one level (Academic Probation to Academic Warning, or Academic Warning to Satisfactory Academic Progress). The Office of Academic Advising coordinates the Summer Bridge Program.

PART-TIME STUDENTS

Students pursuing the bachelor's degree as part-time students will be subject to the same review schedule and standards as full-time students. All part-time students will be reviewed after the Fall and Spring semesters and must satisfactorily complete at least one-third of the academic activities for which he/she has registered. For more information on part-time status, please see page 191.

PETITIONS

Students may petition through the Registrar's Office to the Committee on Academic Operations (CAO) for reconsideration of the status of the following:

- Academic Probation
- Academic Suspension
- Readmission after Suspension

Students who petition for reconsideration of status must accomplish the following:

1. Obtain a petition form from the Registrar's Office webpage.
2. Complete the form and obtain advisor's approval and signature.
3. Submit the form to the Registrar's Office within three weeks of the issuance of grades for B, D, or E term reviews except for readmission after suspension.

DEADLINES FOR READMISSION AFTER SUSPENSION

July 20 for Term A

November 15 for Term C

ADMINISTRATIVE OBLIGATIONS AND HOLDS

The college reserves the right to hold grades, transcripts, registration and/or diploma for any student who has an outstanding administrative obligation with the college.

DIRECTORY INFORMATION AND RELEASE OF INFORMATION

The items listed below are designated as Directory Information and may be released at the discretion of the institution. Under the provisions of the Family Educational Rights and Privacy Act of 1974, as amended, students have the right to withhold the disclosure of any or all of the categories of Directory Information. Written notification to withhold directory information must be received by the Registrar's Office during the first week of the fall semester. Forms are available in the Registrar's Office. A request to withhold directory information in no way restricts internal use of the material by the college.

Directory information will include the student's campus mailbox, full name, year, major, advisor, e-mail address, home address, local address, local phone, photograph, date and place of birth, dates of attendance, degrees and awards received, and most recent or previous educational agency or institution.

Unless a student notifies the Registrar's Office in writing to the contrary, the college considers all undergraduate students to be dependents of their parents. In compliance with the Family Educational Rights and Privacy Act, the college reserves the right to disclose information about the status of dependent students to their parents without the students' written consent. Petition forms for Declaration of Independent Status are available in the Registrar's Office upon request (see information under Distribution of Grades, page 181).

POLICY ON RELEASING INFORMATION ON DECEASED STUDENTS

The education records of deceased students may be released or disclosed, at the time of death, upon written request, to a spouse, a parent, the executor of the estate, the eldest surviving child, the eldest surviving sibling, and surviving descendent, or pursuant to a court order or subpoena. Only the Registrar may release the academic records of deceased students. The person requesting the records must provide as much of the following information as possible within the written request:

Student's name (and maiden name, if applicable).

Student's Social Security number.

Student's date of birth.

The dates that the deceased student attended WPI.

Death Certificate (Photo copy is acceptable).

The petitioner must also provide the following personal information within his/her written request:

Name.

Address.

Phone Number.

Evidence that he/she is qualified to receive the records, based on the above criteria or, in the absence of evidence, a statement certifying the same.

Signature.

Date of request.

A calendar is published by the Registrar's Office prior to the add/drop period which specifies the time periods and fees for late changes. Students are responsible for the dates and should contact the Registrar's Office if they need information to avoid late fees. Requests for exceptions to published deadlines must be submitted in writing to the Registrar's Office and will be granted based on documented extenuating circumstances, i.e., medical, military obligations.

REGISTRATION

During the spring, students will receive information regarding course offerings for the following academic year. After consulting with academic advisors, students will make course selections via the online registration system. Students with holds will be prevented from registering until the obligation is met.

Project/Independent study registration for terms A-E will be accepted up to the 5th day of the term, not including weekends, without penalty. A \$100 late change fee will be charged per project/Independent study after the 5th day.

CHECK-IN

At the beginning of terms A and C, students will receive check-in information. Check-in is an on-line confirmation that students will be attending classes or working on a project for that particular semester. In addition, by checking-in, students acknowledge that they will be financially responsible for paying all charges associated with that particular semester. All students must check-in whether or not course changes are to be made.

COURSE CHANGES

Course changes can be made online until 4 p.m. on the fifth day of classes for each term.

Undergraduate

Course change (Add/Drop) without penalty for terms A-E may occur through the 5th business day of the term. On days 6-10 of the term, not including weekends, add and drop is permitted with instructor approval. A \$100 late fee will be charged on days 6-10. No add/drops are allowed after day 10.

Graduate

Graduate course change (Add/Drop) without penalty may occur prior to the third meeting of the course. A \$100 late fee will be charged for course changes made after the 3rd course meeting and before the 4th. Course changes after the 4th course meeting will result in a grade of W (Withdrawal) and will be issued until the 10th week of the term. No tuition or fees will be refunded during the withdrawal period.

APPLICATION FOR DEGREE

Each student must file an application for degree with the Registrar's Office in accordance with the following schedule:

To graduate in:

May	Beginning of preceding Term B
October	Beginning of preceding Term D
February	Beginning of preceding Term A

WAIT LISTS

When a seat in a class becomes available to a student on the wait list, he or she will be notified via e-mail. The e-mail contains instructions on how to claim the available seat.

If a student does not receive an e-mail, it means no seat is available for him/her in the wait-listed class.

OVERLOADS OF COURSES

The standard course load for WPI students is one unit per term (exclusive of courses for ROTC and Physical Education, which do not count towards overloads). Students may register in advance for a maximum of one unit in any term.

Registration for courses which will result in an overload may take place, on a space-available basis, as of the first day of the term in which that course is offered.

A student may not include any portion of qualifying work as part of an overload without the approval of both the academic and project advisors. Written approval will be requested before registration can be completed in such cases.

Overload charges will be computed each semester based on the course and project load based on the student's registration after the add/drop period in the second term of the semester.

To compute overload charges, see Expenses, page 214.

WITHDRAWAL FROM COURSES

Students who wish to withdraw from a course or project will be assigned a grade of NR (No Record) by the instructor. The student should contact the instructor and indicate that he/she will not be continuing in the class.

TRANSCRIPT FEES

Transcripts are furnished upon written request to the Registrar's Office. Each student is allowed one free transcript. Each additional transcript is subject to a fee established by the college administration. Official transcripts cannot be faxed.

The college reserves the right to withhold the release of transcript information for students with administrative obligations.

DEGREE AUDITS

WPI has developed a computerized degree evaluation which lists students' courses as they apply to the respective department distribution requirements. The degree evaluation is available online.

Any course substitutions or exceptions to the degree evaluation must be forwarded to the Registrar IN WRITING from the Department Program Review Committee.

WITHDRAWAL FROM WPI

Students wishing to withdraw from the WPI should initiate that procedure by consulting the Registrar's Office. Withdrawals are appropriate for medical issues, personal or financial hardships. Any reduction in tuition charges is directly dependent on the date the student officially withdraws and formally files his/her paperwork with the Registrar's Office.

See page 214 for information concerning tuition charges.

PROJECT AND INDEPENDENT STUDY REGISTRATION

PLANNING

During the academic planning period, which starts in February, students who intend to conduct project work during the following year should set aside time to plan their projects, meet with faculty, and form project teams. The faculty will list IQP project opportunities on the Projects Program web page in February. (Some Project Centers and special programs may have an application process before that.) Each academic department typically will list MQPs on the department's web site and will hold a projects information meeting for students in their major. Students are also encouraged to meet with faculty individually.

The most important and difficult part of a project is the planning which precedes the execution. The planning phase of your project will involve developing a background, talking to people in the field, finding out what has already been done in the area, and determining what your goals are and what you need to do to accomplish them. If any special equipment, financing, or resources will be needed for execution of the project, it is especially important to make this known early to ensure that it will be available to you. In addition, most faculty members require a project proposal before registration of the project.

PROJECT REGISTRATION

Students who intend to do project work must complete a project registration form by no later than the beginning of the first term of that project work. The Project Registration Form is available on-line at the Registrar's Office web site, under Forms for Students. Once completed on-line, it must be printed for the signature of the student and the project advisor, and brought to the Registrar's Office. Any student who will travel to an off-campus location, such as a Residential Projects Program site, is required to file a project registration form with the Registrar's Office before traveling to that site.

Project/Independent Study registration for terms A-E will be accepted up to the 4th day of the term (not including weekends) without penalty. A \$100 late registration fee will be charged per project/independent study after the 4th day.

A project involving an off-campus sponsor (MQP mostly, but some IQP) carries the further obligation of compliance with the rules and regulations of the sponsor. Often, these are specified in a formal contract between the sponsor and WPI, and are legally binding. At the time of registration, any affected student will be required to review the legal documents in the Registrar's office, and sign an agreement and release form.

A student may not receive monetary compensation from an off-campus sponsor and receive academic credit for the same work.

For an MQP, the project advisor or an associate advisor must be a member of the faculty in the discipline which corresponds to the major area of study of the student.

CHANGE OF REGISTRATION INFORMATION

For all changes in projects, use the Project Registration Form. Students may change the title, the type or the discipline of the project with the approval of the project advisor but without having to secure the approval of the academic advisor. The student must obtain the project advisor's written approval and the academic advisor's approval before changing the number of units in the current or future terms.

All project changes are to be made only during the course-change period of each term and any late fees associated will apply.

CHANGING PROJECT ADVISOR

To change the project advisor for a degree-required project, students must obtain the authorizing signatures of both the existing and new project advisors and of the academic advisor and submit the form during a course change period.

PROJECT CONFERENCES

Students should report to their project advisor's office at the beginning of the term to make arrangements for subsequent meetings.

OVERLOAD WITH PROJECT

If a part of the work in a given term involves qualifying project work, students may not register for an overload without the written approval of both the academic and project advisors on a project overload petition form. This form is available at the Registrar's Office.

PROJECT COMPLETION

During the final term of registration for the project and sufficiently prior to the deadline for submittal of Completion of Degree Requirement Forms, students must submit their completed project report to the project advisors. Students are also required to submit a copy of the document to the participating off-campus organization sufficiently prior to the end of the term so that proprietary and confidential information in the report can be identified and removed. Most off-campus organizations require 30 days for this review, and the grade and final report cannot be submitted to the Registrar by the project advisor until this review has been done.

A final project report may NOT be submitted as hard copy, or on disk or CD. Directions for submitting the project report electronically are available in the Gordon Library or on-line. (See Electronic Project Submission on page 14.)

A completed electronic Completion-of-Degree-Requirement (eCDR) form, must be printed for signature by each student and signed individually by the advisor as the final step in the submission process. The eCDR form must be submitted in person by the project advisor or a member of the academic department of the advisor to the Office of the Registrar by no later than the second day of the next academic term.

A student who has filed an application to receive their degree in May must submit a completed eCDR to the Office of the Registrar by the last Thursday in D-term.

REGISTRATION POLICY FOR DEGREE REQUIREMENTS

The completion of a degree requirement (MQP, IQP or Humanities and Arts Requirement) will not be recorded in the Registrar's Office after the second day of classes of a term unless the student is registered for a minimum of 1/6 unit *of the same activity* in that term. The deadline for receipt of the Completion Form (and reports for projects) is no later than the second day of classes for the next term. Any exceptions to this policy must be handled by written petition from the project advisor.

NOTE: Candidates for degrees must meet graduation deadlines if they differ from the above. Deadlines for degree candidates will be strictly enforced!

Only Completion of Degree Requirement (CDR) forms which are complete, correct and consistent with the student's registration records will be accepted by the Registrar's Office. The CDR must be accompanied by the written report or other appropriate documentation. (See PROJECTS section, page 13.)

PART-TIME DEGREE STUDENTS

Students may apply for Part-Time Student status on a **semester** basis at the Registrar's Office. Part-time students pay tuition on the basis of registered credit at the start of each semester.

Campus housing will not be allowed. Part-time students may not engage in varsity/club sports, may not participate in any extracurricular activities, and are only eligible to apply for limited federal and state financial aid (institutional financial aid is not available) including any form of on-campus student employment. The following registration procedures apply:

- Students who wish to enroll as part-time students must apply by July 20 for the Fall semester and by November 15 for the Spring semester. Such status will allow a maximum of one unit per each semester of the academic year.
- Changing between full-time/part-time status is not allowed at mid-semester.
- Part-time students wishing to return as full-time students must be readmitted according to the procedures specified under Readmission in the Admissions section of this catalog, page 213.

For the Guidelines for Determination of Satisfactory Progress for Part-time Students, see page 186.

NON-DEGREE STUDENTS

Students wishing to take courses on a full-time or part-time basis as a non-degree student may do so by contacting the Registrar's Office. Non-degree are permitted to earn a maximum of 18 credits (6/3rds) in a non-degree status. Non-degree students will be tracked through the Registrar's Office. Non-degree students pay tuition on the basis of registered credit at the start of each semester. Campus housing will not be allowed. Non-degree students may not engage in varsity/club sports, may not participate in any extracurricular activities, may be required to register for courses on a space-available basis, and *are not eligible for financial aid or any form of on-campus student employment.*

THE GATEWAY PARK

Located near the intersection of I-190 and I-290 in Worcester, the Gateway Park is transforming a 12-acre former industrial site into a mixed-use destination for life sciences and biotech companies and the people who work for them. The project will include five life sciences buildings totaling 500,000 square feet of flexible, adaptable lab space designed to meet the needs of research organizations; 241,000 square feet of market rate, loft condominiums; and several planned retail establishments. The first building, the WPI Life Sciences and Bioengineering Center, was completed in spring 2007; additional buildings are in the planning stages.

In fall 2007, the Gateway Park won two major national awards for excellence in designing the re-use of former industrial sites. Undergraduate projects in the life sciences are conducted here as well as in Goddard Hall.

For more information on the Gateway Park, see the website at <http://www.gatewayparkworcester.com/index2.html>.

SPECIAL PROGRAMS FOR FIRST YEAR STUDENTS

INSIGHT PROGRAM

In WPI's *Insight Program*, groups of 25 to 30 first-year students are advised by a faculty mentor who makes a real commitment to working with first-year students. These faculty members represent all the departments and programs at WPI, and in many cases are the senior faculty members and the most experienced advisors. Each faculty advisor works with two advanced undergraduates, the Community Advisor and the Residence Advisor, to schedule a number of activities, for example, on time-management, study skills, test-taking strategies, and community service. The Insight Program purposefully blends the academic and social aspects of life at WPI.

GREAT PROBLEMS SEMINARS

This is a two-course sequence designed to serve as an introduction to project work and university-level research with a focus on themes of current global importance. The Great Problem Seminars (GPS) are all about important problems. Everything students do is tied to current events, societal problems and human needs. The skills students develop are exactly what they need to be successful both in project work at WPI and in their future careers.

Examples: In *Power the World*, students and faculty focus on the issues surrounding energy and its conversion and use. Student projects have included energy audits of campus buildings, design of energy capturing devices, analysis of policy changes needed to promote wind power.

In *Grand Challenges*, students and faculty examine several of the issues identified by the National Academy of Engineers as the most important of our time: transportation, housing, water, energy, healthcare, food. Student projects have included design of systems to clean up dirty harbors, business plans for a sustainable soap production business, and a cell phone recycling program.

New themes will be offered each year.

Enrollment is limited.

The Undergraduate Programs Web Site (www.wpi.edu/Academics/Undergraduate/)

The Academic Advising Office (www.wpi.edu/+OAA)

The First Year Web Site (www.wpi.edu/+FYE)

GRADUATE COURSES

WPI students may enroll in graduate courses as part of their regular undergraduate studies without being admitted to the graduate program. Graduate courses applied toward the undergraduate degree are awarded undergraduate units with a conversion rate of 1 graduate credit = 1/6 undergraduate unit.

COMBINED BACHELOR/ MASTER'S PROGRAM

INTRODUCTION

WPI undergraduates can begin work on a graduate degree by enrolling in a combined Bachelor's/Master's program. This accelerated course of study allows students to obtain an MS degree after only five years of full-time work (i.e., typically one year after completion of the BS). Students often obtain the BS and MS in the same field or department, but with careful planning some students complete the combined BS/MS program in two different fields; the combination of a BS in Civil Engineering and an MS in Fire Protection Engineering is a common example. (Throughout this section, "MS" will be used to refer to all Master's-level degrees; most students who complete the combined program obtain the MS).

PLANNING YOUR PROGRAM

Because BS/MS students use some approved courses to satisfy the requirements of both degrees simultaneously, it is crucial for them to plan their curriculum early in their undergraduate career.

The specific course and MQP requirements for a BS/MS program are determined individually, so students should consult with their own advisor as well as the graduate coordinator in the department in which they plan to pursue their MS degree early in their Junior year. This consultation, or series of consultations, should produce a slate of approved undergraduate courses that will be used for graduate credit. Sometimes the instructors of these courses will ask BS/MS students to complete additional work, or will otherwise hold them to higher standards of achievement.

A student's advisor and graduate coordinator will also determine what role the MQP will play in the BS/MS program. Sometimes the MQP provides a foundation for a thesis. In cases where the BS and MS are not awarded in the same field, the MQP usually relates to the graduate program's discipline.

Once the specific course and MQP requirements have been established, students complete a Course Selection Form which is submitted to the relevant department(s) for approval. This written agreement constitutes the set of conditions that must be met for a student to complete the BS/MS program. They are a plan for completing the requirements for both degrees and they

will not supersede or otherwise obviate departmental and university-wide requirements for either degree. The completed, signed form must be submitted to the Registrar before the student may matriculate in the combined program.

HOW TO APPLY

Students almost always apply for admission to the BS/MS program in their Junior year, typically after they have established their curriculum and other program requirements and completed the Course Selection Form with their faculty advisors. Applications are submitted to the Office of Graduate Admissions and are processed with all other graduate applications. Once a decision has been reached, the Office of Graduate Admissions will notify the student, usually within six weeks of receiving the application.

PROGRAM REQUIREMENTS

Only registered WPI undergraduates may apply for admission to the combined BS/MS programs. Students are considered undergraduates, no matter what courses they have completed, until they have met all of the requirements for the Bachelor's degree. In order to receive the BS and the MS, all of the requirements for both degrees must be completed.

In most departments a student may take up to four years to complete the Master's portion of the BS/MS program. There are exceptions, however, so students are advised to discuss their timetable with the appropriate advisor or graduate coordinator. Students who stop registering for classes for an extended length of time may be asked to petition the Committee for Graduate Studies and Research to continue their program.

CREDIT EQUIVALENCE AND DISTRIBUTION

No more than 40% of the credit hours required for the Master's degree, and which otherwise meet the requirements for each degree, may be used to satisfy the requirements for both degrees. In some departments, students may not double-count more than 30% of their graduate credits. Consult the graduate catalog for the requirements of your program.

Double-counted courses are recorded on the transcript using the credit hours/units and grades appropriate at the graduate or undergraduate levels. For students in the combined BS/MS program, approved undergraduate courses are assigned graduate credit with a conversion rate of 1/3 WPI undergraduate unit = 2 graduate credit hours, while graduate courses applied toward the undergraduate degree are awarded undergraduate units with a conversion rate of 1 graduate credit hour = 1/6 undergraduate unit.

INFORMATION TECHNOLOGY RESOURCES

WPI Information Technology manages a wide range of information technology resources for the WPI community to support teaching, learning, research and student life. The WPI computer account provides Undergraduate students access to technology resources including personal network file storage and acts as their WPI virtual identity while the student is actively registered.

SOFTWARE

Numerous software packages including academic courseware are available to students:

- in Public computer labs
- via terminal services using Remote Desktop Connection from Windows, Macs or Linux personal machines
- via the Virtual Lab using a web browser
- via network download for some applications

WPI partners with Microsoft to provide students access to current Microsoft operating system and business productivity software for use on their personal computers. Students have similar access to anti-virus protection software.

COMPUTER LABS

Hundreds of computers are available across campus for student use with many located in open access labs within academic buildings and the Gordon Library. Each of these labs offers a consistent user interface, software profile, and network access to centralized personal file storage. The Gordon Library houses a Multimedia Lab for high-end digital editing as well as the centrally located Information Commons print center that is available to meet students' scanning and printing needs.

COLLABORATION & LEARNING RESOURCES

- Tech Suites: Technology-enhanced meeting spaces designed for student project group use
- Learning Management Software: Blackboard Course web sites, branded as myWPI
- Tools: Exchange (email/calendar/contact management), Office Communications Server (OCS), and SharePoint
- Equipment Loans: includes laptops, digital cameras, camcorders, audio recorders, hard drives, projectors, etc.
- Electronic classrooms and electronically enabled conference rooms
- Web-conferencing tools to allow remote participants to conduct meetings in real-time in a web-based environment from any location with a computer and a high speed Internet connection

TECHNOLOGY SUPPORT & INSTRUCTION**Technology Helpdesk**

Gordon Library, Main Floor; 508.831.5888; helpdesk@wpi.edu; www.wpi.edu/+Helpdesk

- In-person technology support provided at the Helpdesk
- Requests for help via the web or email with self-help content available online

Academic Technology Center

Fuller Labs, Room 117; 508.831.5220; atc@wpi.edu; www.wpi.edu/+ATC

- In-person technology support on audio-visual equipment loaned out for multi-media projects and campus events sponsored by WPI student organizations
- Large format poster printing
- Video bulletin board system for announcements pertaining to campus events

Instruction & Research Support

- Instructor-led software applications training offered in our computer-training classrooms
- Instructor-led training for some specialized academic software applications
- Individualized help with project-related research is available at the Gordon Library

INFRASTRUCTURE SERVICES

Network Operations manages the complex WPI network, including:

- High speed fiber optic network connects campus buildings including residence halls
- Point to point wireless connects participating Greek houses to the WPI Network
- Wireless networking is available in all academic buildings, residence halls, and participating Greek houses
- High speed Internet connectivity including connection to Internet2
- Virtual Private Network (VPN) access provides secure remote access to WPI on-campus information technology resources

ENTERPRISE SOLUTIONS SERVICES

The Enterprise Solutions Services Team manages the enterprise wide technology solutions that enable administrative departments to run the critical business functions of the University. These systems provide students and faculty access to important student registration, advising, and financial information. It also enables students to update their biographical information, manage course registration, and check grades online.

MUSIC AND THEATRE FACILITIES**COMPUTER MUSIC LABORATORIES***Daniels Hall*

These laboratories support creative and research activity in a variety of music- and sound-related applications including real-time virtual orchestra design and production techniques. The lab contains hardware and software for multi-track digital recording and editing, signal processing, algorithmic composition, sound synthesis, MIDI sequencing, music notation, and music programming.

GREAT HALL OF ALDEN*Alden Memorial: First Floor*

The Great Hall is used for major productions in Theatre and Music. It is the venue for the Masque Theatre performances. The Hall is sometimes used, in addition, for festive and gala campus functions.

THE LITTLE THEATRE*Sanford-Riley, Lower Level*

Made possible with a major gift from the George I. Alden Trust, this intimate, 99-seat black-box style theatre is the university's first dedicated theatre facility. With its flexible layout and moveable seating, permanent lighting grid and sound system, control booth, greenroom/dressing room, and handicapped accessibility, the Little Theatre, a new home for the university's diverse theatre programs, is well suited for a wide range of dramatic presentations. For more information, see <http://users.wpi.edu/~ltheatre>.

GREEN ROOM*Alden Memorial: First Floor*

Alden Hall houses many of the theatre activities at WPI, both academic and extra-curricular. The Green Room serves as the laboratory for Department of Humanities and Arts, Division of Drama Theatre Performance projects and Sufficiencies, MQPs and IQPs. The sub-basement contains the scene shop and props-storage area and also holds a major work room for Lens and Lights. Students interested in theatre performance and Lens and Lights activities have many resources in Alden Hall.

SPAULDING RECITAL HALL AND OTHER ROOMS FOR REHEARSAL AND PERFORMANCE*Alden Memorial: Lower Level*

Alden Center for the Performing Arts houses the Spaulding Recital Hall, Perreault Chamber Rehearsal Room, the Janet Earle Choral Rehearsal Room, three practice rooms, and the Knight Lecture Room. Available for practice are Steinway grand pianos and the Three Manual Aeolian-Skinner pipe organ in the main Concert Hall. There are three concert grand pianos for recitals, ensemble work and concerts. WPI has some instruments that can be made available to students upon request.

OTHER MUSIC FACILITIES

Music facilities also include The Janet Earle Room, The Perreault Chamber Rehearsal Room, the music classroom, practice rooms, computer music labs and storage facilities.

DRAMA/THEATRE RESOURCE LIBRARY

The Department of Humanities and Arts Drama/Theatre Resource Library, housed in Salisbury Labs Room 20 and available as posted, contains publications, magazines, published scripts, and other information to assist students working on projects (MQP, IQP, practica, ISP) in Drama/Theatre. Scripts for current productions can usually be found nearby the Resource Library on the table in the center of the main Humanities and Arts area. Most resource items and display scripts must be used in the immediate area, and this service is not per se a lending library.

GEORGE C. GORDON LIBRARY

The George C. Gordon Library is open over one hundred hours each week during the academic year. The library provides resources and innovative services in support of the teaching, learning and scholarship process at WPI.

The library's collections support the curriculum and research needs of the WPI community. Currently the library holds thousands of print and electronic journals, a vast collection of electronic books, print books, and research databases which support all areas of the WPI curriculum. The library collection also contains undergraduate project reports, graduate theses and dissertations. Music CDs, DVDs, video games and other media, and bestsellers are available for educational and recreational purposes. The WPI Archives and Special Collections include the Robert Fellman Dickens Collection and historic video games along with manuscripts and primary source materials on the history of the university.

The library catalog, electronic journal and book collections, specialized research databases, course-specific information, and many other resources are available from the library's web site (<http://www.wpi.edu/+library>). The web site is the focal point for digital library resources and services. Access to WPI users who are off-campus is available through a simple login.

The staff of Gordon Library offer many services to support student learning. The Research and Instruction staff help students with research problems and questions, offer library instruction and orientation sessions, and provide research consultations to individuals and project groups. Students can request materials not held in Gordon Library through the interlibrary loan service, (ILLiad). WPI students also have access to the collections of other academic libraries within Central Massachusetts with the library's membership in the Academic and Research Collaborative (ARC). Students can obtain an ARC cross-borrowing card which allows direct borrowing at many regional academic libraries.

The Gordon Library, Academic Technology Center, and the Technology Help Desk provide one stop shopping for student research, information, and technology support in the Information Commons on the library's main floor. The adjacent Class of 1970 Library Café serves food and beverages.

The library's four floors contain a wide variety of individual and group study spaces. Tech Suites, which are collaborative work areas equipped with up-to-date technology, can be reserved for student use. Additional group study spaces are located throughout the building. There are also computer

workstations configured for group and individual use, many with large monitors for collaborative project work. The Multi-media Lab on the first floor offers specialized multimedia software. The Anderson Instruction Labs are used by staff for training during the day and can be scheduled by student groups for evenings and weekends. The library features both wireless and wired computer network access, with over 125 computers. Special exhibits are offered regularly in the library's galleries. For more information please visit the library web site at <http://www.wpi.edu/+library>.

STUDENT SERVICES**STUDENT DEVELOPMENT AND COUNSELING CENTER**

The WPI Student Development and Counseling Center (SDCC) provides a wide range of services that are FREE of charge to all students enrolled in classes at WPI. The primary purpose of the SDCC is to provide counseling, educational programming and training, referral, and crisis intervention services to the entire WPI student community focusing on 1) assisting students in their full and complete development as they go through the process of becoming adults so that they may achieve greater levels of personal, academic, and professional success, and 2) assisting students in becoming aware of, and effective in, their roles, relationships, and responsibilities as members of an ever burgeoning global society. The professional staff are trained to help students deal with a variety of issues including:

Situational Problems- poor academic performance; managing stress; time management; relationships with significant others; divorce or other family problems; feelings of loneliness, anger, anxiety, confusion, depression; loss; discrimination; harassment; alcohol or other substance problems; sleep disturbances; medical/physical conditions; learning disabilities.

Crisis-Related Problems- physical and/or sexual assault; impulse control problems; suicidal thoughts or behaviors; traumatizing experiences such as date rape, academic setbacks, or the loss of a loved one.

Developmental Issues- developing self-esteem; establishing personal and/or gender identity; helping to define sexual orientation; managing stress from earlier traumatic events; exploring personal and professional goals.

The SDCC staff can also provide referral services for psychiatric evaluation, psychological and learning disability assessment, or other treatment.

The services of the SDCC are confidential. The mental health professionals and support staff are highly trained and sensitive to students' privacy and personal concerns.

The SDCC is located at West Street House, 157 West Street, near the corner of Institute Road. Appointments may be made during the academic year (A through E terms) in person or by calling (508) 831-5540. Office hours are 8:30 a.m. to 5:00 p.m. Monday-Friday (8:00 a.m. to 4:00 p.m. June to mid-August).

ACADEMIC RESOURCES CENTER

WPI's Academic Resources Center (ARC) provides academic support services that are designed to enrich and enhance the learning experience of all WPI undergraduate students. Its student-based collaborative learning environment offers individualized assistance in a variety of subjects, as well as a comprehensive peer tutoring program.

Students may obtain individual counseling in such areas as learning styles, effective study strategies, problem solving and critical thinking skills, and time management. Appointments may be set up with staff members to develop individualized Academic Success Plans which help students set their academic goals, discover their learning strengths and weaknesses, and design the appropriate learning and study strategies that work best for them.

Students may call (508) 831-5381 for an appointment.

Periodically, students may find that they need some individual assistance with a particular subject or topic. The ARC peer tutors, who are certified by the College of Reading and Learning Association, help students one-on-one in a variety of academic subjects. Tutors are available on a walk-in basis Monday through Thursday. See www.wpi.edu/Admin/ARC/tutorschedule.pdf for an up to date tutor schedule.

The Academic Resources Center is located in Daniels Hall.

MASH (MATH AND SCIENCE HELP) PROGRAM

MASH is an academic support program for first-year students in mathematics and science courses. Offered to all students enrolled in a supported course, MASH provides assistance in regularly-scheduled study sessions beginning the first week of the term.

MASH review sessions are offered for a limited number of courses which students and faculty have identified as difficult. These courses may have heavy homework assignments or they may require understanding of new and difficult concepts. Whatever the reason, some courses are more challenging than others. MASH helps students meet that challenge.

Each study group is guided by a MASH leader, an undergraduate student who has taken the course before and who, therefore, understands the course material and what the instructor expects. MASH leaders attend all class lectures, take notes, complete assigned readings and other assignments, and conduct three or four 50-minute MASH sessions each week. By attending class and demonstrating effective student behavior, MASH leaders can assist students with the language of the discipline, the integration of lecture and readings, and the development of good study habits.

Through the MASH program, students become actively involved with the content material in a supportive environment. Studies show students who attend MASH sessions regularly earn higher grades than students electing not to participate. But even more important, MASH participants master new concepts, learn to put ideas into perspective, and develop a better way to study. MASH is offered by the Academic Resources Center.

OFFICE OF DISABILITY SERVICES

The mission of the Office of Disability Services is to ensure that all students with disabilities can freely and actively participate in all facets of University life; to provide and coordinate support services that enable students with disabilities to maximize their educational potential and to increase the level of awareness among members of the University so that students with disabilities are able to perform at a level limited only by their abilities, not their disabilities. Our services are confidential and available to any student enrolled in a WPI course. By law, it is the student's responsibility to identify himself/herself to the Office of Disability Services (ODS) and to provide documentation of their disability by a licensed professional. (For specific information see our Documentation Guidelines on our webpage.) All students who have been admitted to WPI have the opportunity to self-identify and disclose their disability by filling out our Voluntary Disclosure Form, which can be found on our webpage. Students should send this form, along with the supporting documentation, to the ODS to begin the process of formally approving accommodations. Students with disabilities who are diagnosed after their admission to WPI or who have need for temporary accommodations due to an injury or other transitory issue must also provide appropriate documentation to the ODS if they wish to receive accommodations.

For further information please visit the Disability Services web page at: <http://www.wpi.edu/+disabilities>.

The Office of Disability Services is located at 157 West Street in the Student Development and Counseling Center. We are open Monday - Friday 8:30 a.m. - 5:00 p.m. Students may drop-in or call (508) 831-4908 for an appointment.

THE WRITING CENTER

The WRITING CENTER, located at Daniels Hall 111 in the heart of campus, employs 20 trained, peer writing tutors who take the course, Peer Tutoring in Writing. Through one-on-one tutoring appointments and small group workshops, tutors help undergraduate and graduate students with any type of communication project: course papers and project reports, resumes, dissertations, oral presentations and slides, website and document design, and more. Tutors talk through project goals, help writers brainstorm and organize ideas, provide a critical reader's feedback, and provide mini-reviews of grammar and punctuation rules. To make an appointment or to find out about special group workshops, visit our site at www.wpi.edu/+writing. Faculty interested in designated tutoring for courses should contact Writing Center Director, Lorraine Higgins, at x5503 or at ldh@wpi.edu

WRITING COURSES AND ADVISORS

For information on WPI's writing programs, see Humanities and Arts faculty as follows:

Students for whom English is the native language can consult Lorraine Higgins (Salisbury Labs 20) about these programs.

The WPI advisor for undergraduate students whose native language is not English is Prof. J. Forgeng (SL 08).

WORLD WIDE WEB

The WPI World Wide Web server is the campus information system. It contains a great deal of useful information about people and programs at the university, and is updated frequently. In addition, by using the Web, students gain access to a vast universe of information on any subject imaginable. This is why the Web is such a useful research tool for both faculty and students.

WPI's Web address, or URL, is: www.wpi.edu. Questions about WPI's Web site should be directed to the Web Development Office, webmaster@wpi.edu.

ENTREPRENEURSHIP

The Collaborative for Entrepreneurship and Innovation (CEI) at WPI is part of the School of Business. The CEI is the advising home of the Innovation and Entrepreneurship Club, WPI's Chapter of the Collegiate Entrepreneurs' Organization (CEO). The CEI supports the Business School's Tech Advisors Network (TAN) which nurtures new and prospective ventures launched by WPI students, faculty and alumni. The role of the CEO is to foster the development of entrepreneurship mindsets by all WPI students.

Everything we do in the CEI is driven by our mission and goals, which you will find below. That is because we are providing our students with an integrated experience that will help them become the very best entrepreneurs in the world.

OUR MISSION

The Collaborative for Entrepreneurship and Innovation inspires and nurtures people to discover, create, and commercialize new technological products and services, and to create new organizations based on those products and services, thereby advancing economic development and improving society.

OUR GOALS

We will:

- Attract students and faculty members to WPI who are interested in using inventions and technology to foster new businesses;
- Foster informed risk-taking among our undergraduate and graduate students and others wishing to pursue the dream of entrepreneurship;
- Build bridges between WPI students, staff, faculty, and alumni, and the wider entrepreneurial business community;
- Encourage corporations to develop an environment that celebrates entrepreneurship as a combined act of discovery, creativity, and innovation; and
- Achieve a leadership role among the preeminent entrepreneurship programs in the U.S.

Currently the CEI offers a number of opportunities to WPI students. These include:

- Minors in Entrepreneurship and Social Entrepreneurship through the School of Business and other departments.
- Courses in Entrepreneurship for those who do not wish to take a minor.
- MQP and IQP opportunities in Entrepreneurship.
- An external advising team of entrepreneurs and investors who are available to mentor aspiring entrepreneurs among our students.
- A student organization, the Innovations and Entrepreneurship Club.
- Numerous competitions focused on inventions, innovations, business plans, and other entrepreneurship-related activities.

For more information on the Collaborative for Entrepreneurship and Innovation, please contact Gina Betti, Associate Director, CEI, at 508-831-5761; gbetti@wpi.edu.

STUDENT EXCHANGES

As technology and commerce become increasingly international in outlook, students in engineering, science and management must learn about countries and cultures other than their own. To respond to this need, WPI offers its students an extensive range of opportunities to broaden their academic and cultural perspectives through participation in the Global Perspective Program. WPI also offers traditional exchange programs.

The principal academic emphasis in all exchanges is upon course work. In such programs, students must work closely with their advisor, the academic advisor of the exchange program, and the program coordinator at the site to design an individual program of study. Students have the responsibility of obtaining prior tentative approval from their department that courses taken abroad will count towards departmental distribution requirements. For final transfer credit evaluation, students must provide upon return the necessary detailed information on the content of courses taken abroad and the satisfactory completion of all work. In some exchanges, opportunities exist to complete project work (IQP, MQP, and Humanities and Arts requirement). The exchanges offer exceptional possibilities for projects comparing American and overseas applications of technology and the impact of technology on society. For WPI students on these exchanges, time is usually available for additional travel, before or after the formal academic period.

For more information on these programs, consult with Leanne Johnson in the Interdisciplinary and Global Studies Division or the academic advisor listed for each program.

LANGUAGE REQUIREMENTS

The usual language of instruction at most of the exchange institutions is the official language of the host country. While these institutions may offer a few courses taught in English, most lectures will be given in a foreign language. Thus, exchange students who intend to complete substantial course work must acquire the necessary language background. In some cases intensive language instruction can be arranged on site. In other cases, students acquire the language background through courses taught at WPI or other colleges, or by self-study. A few exceptions exist at some technical universities where the official language of instruction may be English.

UNIVERSITY OF APPLIED SCIENCES; KONSTANZ, GERMANY; EXCHANGE

Students who already know German or are planning to begin studying it have the opportunity to study in Germany for a semester at the Hochschule für Technik, Wirtschaft und Gestaltung (HTWG: university of applied sciences; <http://www.htwg-konstanz.de/>) in Konstanz, Germany. The city of Konstanz, located at the western end of Lake Constance (in German, der Bodensee) and right on the border with Switzerland, is one of Germany's most beautiful cities, with a well-preserved medieval and renaissance city center. The snow-covered Alps are visible across the lake and the HTWG campus is on the bank of the Rhine where it flows out of the lake and heads north. The city is pedestrian friendly, has great food, and there are unlimited opportunities for biking, boating, swimming, skiing, and hiking in the immediate vicinity. Weekend travel to Austria, Italy, and France is easy and Switzerland is literally right across the street. Students who begin their study of German in Terms A, B, C can complete the Humanities and Arts requirement by attending the HTWG in Terms D and E. WPI will not charge these students extra tuition for Term E. Students whose German is already at an intermediate or advanced level may take either advanced language courses or technical courses at the HTWG. Admission to this exchange program is competitive.

WORCESTER CONSORTIUM COURSE CROSS-REGISTRATION

The Colleges of Worcester Consortium, Inc. consists of the following institutions: Anna Maria College, Assumption College, Becker College, Clark University, College of the Holy Cross, Cummings School of Veterinary Medicine at Tufts University, Massachusetts College of Pharmacy and Health Sciences, Nichols College, Quinsigamond Community College, University of Massachusetts Medical School, WPI and Worcester State College. Full-time WPI students who cross-register for courses at other Worcester Consortium colleges pay no extra fees. Students are limited to one course per semester. The no-charge plan does not include evening colleges or summer school. The Consortium provides shuttle buses which make frequent trips every day to all participating institutions. For cross registration information and shuttle schedules, visit www.cowc.org.

Students interested in registering for Worcester Consortium courses should discuss their program with their advisors, and then obtain regulations and registration forms from the Registrar's Office.

COOPERATIVE EDUCATION PROGRAM

THE CO-OP PROGRAM

A Division of the Career Development Center

The WPI Cooperative Education Program provides an opportunity for students to alternate time in the classroom with extended periods of paid, full-time, career-related work experience in industry or private and government agencies. The program, which is optional at WPI, entails work assignments from six to eight months in duration which begin in either January or May.

Most students elect to participate in one co-op placement, though students may choose to work for more than one assignment. Students who participate in the co-op program can graduate on time especially when they have advanced placement course work. It is recommended that students pre-plan during their first or second year at school. Preparation of a total college plan with the student's academic advisor is required to ensure a compatible scheduling of work periods and academic courses.

In order to qualify for the co-op program, students must meet the following requirements:

1. they must have completed two years of study but may not participate once they have started their senior year,
2. they must be in good academic standing (students cannot be on academic warning or probation),
3. they are only permitted to register for project credit during the co-op assignment with the approval of their academic and project advisors, co-op supervisor and co-op program coordinator, and
4. they must be full-time students.
5. their co-op assignment must be related to their major area of study

Exceptions to any of these requirements are made by submitting a written petition to the Director of the Career Development Center who consults with the WPI Registrar for a final decision.

ADVANTAGES TO STUDENTS AND EMPLOYERS

Co-op offers several advantages to students:

1. Participating in co-op helps students make career-related decisions.
2. Students can test classroom learning in the real world.
3. Co-op earnings enable students to pay a significant portion of their college expenses.
4. Students improve their after-graduation job prospects by gaining valuable work experience. In fact, more and more companies are using their co-op program to identify candidates for full-time permanent positions when the students graduate and/or seek candidates with co-op experience from other companies.
5. Students develop networking contacts in their area of expertise.

Employers also benefit in a number of ways:

1. Co-op students can handle assignments that may be difficult for untrained personnel, but that do not require the talents of full-time professionals.
2. The program gives employers the chance to judge the actual on-the-job performance of potential permanent employees.
3. Retention rates for permanent employees recruited through a co-op program are higher than for those hired through other routes.

THE PLACEMENT PROCESS

Students should attend the co-op orientation or meet with the Director should attend the co-op orientation or meet with the Co-op Coordinator at the Career Development Center. Those who are interested in participating in the co-op program must register with the Career Development Center (CDC) several months before the start date of the work assignment.

Employers seeking to fill a co-op position provide the CDC with a brief job description on Job Finder, our web-based system. Students decide which jobs they are interested in applying for and forward their resume to the appropriate companies. Some employers interview candidates on campus; others review resumes and then invite selected students for on-site interviews. The final hiring decision is left to the employer. The student is free to interview with more than one employer and to identify opportunities outside of WPI's postings, ultimately choosing among the employment offers received.

A co-op position is not guaranteed, but every effort is made to locate appropriate work assignments for qualified students. More than 300 employers have provided co-op opportunities to over 2000 students since the program began in 1976. The search for additional employers is an on-going activity.

OTHER CONSIDERATIONS

The employment experiences gained through the Cooperative Education Program do not substitute for, nor qualify as Major Qualifying Project (MQP) or Interactive Qualifying Project (IQP) requirements. These experiences, however, often generate ideas for qualifying projects with the cooperating companies.

For some students, the co-op orientation and registration period overlaps with an off campus activity, usually involvement with an IQP at one of our project centers. Students should not think that this prevents them from applying for co-op positions since our office has developed systems for dealing with their absence. Students who will be off campus during the orientation and registration period should contact the Career Development Center before their departure to complete the registration process in advance.

INFORMATION AND REGISTRATION

Students interested in exploring the possibility of participating in the program should contact:

Career Development Center
Project Center, Lower Level
(508) 831-5260

SUMMER SESSION (TERM E)

With course offerings directed at meeting student needs, a variety of sessions, and both traditional and blended classes, E-term provides flexibility for students looking to work over the summer and still take advantage of these academic opportunities. E-term is a great time to

- Get back into good academic standing
- Lighten the load for the next year
- Speed up your time to degree completion
- Stay on track in the BS/MS program

E-term offers an exceptional opportunity to participate in certain types of project activity on a convenient basis since classrooms and laboratories will be less crowded and outside field work will enjoy better weather conditions. E-term also offers an excellent opportunity to complete a qualifying project through a full-time effort during a single term.

Since class sizes are generally smaller in E-term, students will enjoy more individually-oriented course work – a real benefit for classes that students find challenging or courses that are designed to prepare students for more advanced classes in their major.

Students planning to participate in Term E should register at the regular spring registration period. For more information, including payment and financial aid information, visit the E-term webpage at: <http://www.wpi.edu/academics/Summer/>

Students from other campuses are also invited to take advantage of E-term offerings at WPI. Admission to the summer session does not imply admission to regular academic year programs. Students desiring to continue their work at WPI following the summer session should seek admission following standard WPI admissions procedures issued through the Admissions Office.

Awards and prizes are determined by the academic department or by selected committees.

COLLEGE AWARDS

SALISBURY PRIZE AWARDS

These historic awards are made to highly meritorious seniors. These awards were established by Stephen Salisbury, a WPI founder and former president of the Board of Trustees.

TWO TOWERS PRIZE

This prize is awarded to the student who, through general academic competence, campus leadership, regular course work and special work in research and projects, best exemplifies a combined proficiency in the theoretical and practical union implicit in the Two Towers concept, which is at the heart of WPI's Two Towers tradition.

SIGMA XI AWARDS IN ENGINEERING AND SCIENCE

These awards in engineering and science are given to the students and their advisors for the Major Qualifying Projects which are judged to be the best in originality, contribution to the field, professional competence, and for the most useful applications.

PRESIDENT'S IQP AWARDS

These awards are given to student teams whose conception, performance, and presentation of their Interactive Qualifying Projects have been judged outstanding in focusing on the relationships among science, technology, and the needs of society.

PROVOST'S MQP AWARDS

These awards offer recognition to those students who have completed outstanding Major Qualifying Projects as a demonstration of their competency in a chosen academic discipline. Each academic department conducts its own competition to select the winners.

UNITED TECHNOLOGIES CORPORATION MINORITY AWARD

This award is presented to an outstanding minority undergraduate student.

OUTSTANDING WOMEN STUDENT AWARDS

Marietta E. Anderson Award, an award which is presented to the most outstanding woman student in one of the three lower classes who not only has a superior academic record, but also has been a work-study student, participated in recognized extracurricular activities, and has been a volunteer for college-sponsored activities.

Funds from an anonymous donor provide the following awards to women students preparing for careers in engineering or science. Awards are based on academic excellence, contributions to the WPI community, and professional goals. The awards are named each year for women who have played significant roles at WPI.

Bonnie-Blanche Schoonover Award, honoring WPI's former librarian.

Ellen Knott Award, honoring a long-time secretary in the Mechanical Engineering Department.

Gertrude R. Rugg Award, honoring WPI's late Registrar Emerita.

WILMER L. AND MARGARET M. KRANICH PRIZE

Students who are seniors or completing their junior year will be nominated by faculty for the annual award. The award will go to a student majoring in engineering, science or management who best exemplifies excellence in the humanities and in the full integration of humanities into his/her undergraduate experience. Double-majors who fulfill one major in Humanities and Arts are not eligible.

SPECIAL AWARDS

ALPHA PHI OMEGA SERVICE AWARD

AMERICAN INSTITUTE OF CHEMISTS FOUNDATION *Chemistry and Biochemistry*

An award by the New England chapter of the American Institute of Chemists to honor outstanding seniors majoring in chemistry and biochemistry.

AMERICAN SOCIETY FOR METALS: CHESTER M. INMAN '14 OUTSTANDING STUDENT AWARD

Mechanical Engineering

The Worcester Chapter of the American Society for Metals presents \$200 to a student for excellence in a Major Qualifying Project dealing with processing or materials science.

HAROLD S. BLACK AWARD

Electrical and Computer Engineering

This award was established in 2001 to honor the memory of inventor Harold S. Black '21. The award is given by the faculty of the Electrical and Computer Engineering (ECE) Department to one or more ECE seniors who have demonstrated outstanding creativity and enthusiasm in engineering problem solving, practical implementation of problem solutions, and exemplary character in their contributions to the welfare of the WPI community.

CENTRAL NEW ENGLAND AICHE AWARD FOR SIGNIFICANT CONTRIBUTION

Chemical Engineering

This award is given to an individual in recognition of significant contributions to the American Institute of Chemical Engineers.

COMMUNITY SERVICE AWARD PRESENTED IN THE MEMORY OF EDWIN B. COGHLIN '23

Alumni Office

This award recognizes individuals who have demonstrated an extraordinary personal commitment above and beyond their normal involvement on campus in both academic and extracurricular activities.

COMPUTER SCIENCE OUTSTANDING JUNIOR AWARD

Computer Science

This award is presented to a computer science junior who has an excellent academic record and who shows promise for continuing success.

COMPUTER SCIENCE OUTSTANDING SENIOR AWARD

Computer Science

This award is presented to one or more computer science seniors who have an outstanding record and who have contributed to the enrichment and professional development of fellow students.

JAMES F. DANIELLI AWARD***Biology and Biotechnology***

This award, given by the Department of Biology & Biotechnology, honors the memory of Dr. James F. Danielli, a former department head and world-famous scholar.

FRANK D. DEFALCO AWARD***Civil and Environmental Engineering***

Award to WPI undergraduate Civil Engineering students who has completed two and one half years towards a B.S., interested in career constructed facilities and a member of ASCE student chapter.

ETA KAPPA NU OUTSTANDING STUDENT AWARD***Electrical and Computer Engineering***

The electrical and computer engineering honor society presents this award to the outstanding senior and junior in recognition of their academic achievement and their service to the WPI community.

GENERAL CHEMISTRY ACHIEVEMENT AWARD***Chemistry and Biochemistry***

This award is given to the student who has completed the freshman chemistry course with superior academic performance. Department award.

ALLAN GLAZER AWARD***Mechanical Engineering***

Established in 1992 by the family and friends of Allan Glazer '47, this award is given to a junior majoring in mechanical engineering who has demonstrated outstanding academic achievement, special ingenuity in problem solving, and enthusiasm for engineering challenges.

GOAT'S HEAD AWARD***Student Government Association***

Awarded annually to the outstanding new Senator of the year.

THE ROBERT H. GODDARD AWARD***Physics***

Established by the classes of 1908 and 1909 as a memorial to Dr. Goddard, this prize is awarded for outstanding achievement, scholarship, consistent effort and dedication of purpose in both theoretical and experimental areas of physics.

HEALD BROTHERS SCHOLARSHIP***Mechanical Engineering***

This scholarship identifies and supports outstanding young men and women who represent, in modern form, the spirit of "Yankee Ingenuity" that characterizes the evolution of the great manufacturing enterprises from the beginnings of the American Industrial Revolution.

ANDREW HOLT MEMORIAL AWARD***Civil and Environmental Engineering***

This award is presented to a civil engineering senior who has consistently earned academic honors and who shows excellent promise for success.

STEVEN J. KAHN AWARD***Humanities and Arts***

This award is presented to the outstanding senior in the WPI Glee Club in recognition of his contribution, commitment, and unwavering loyalty to the organization.

THE WILLARD ELLIOT LAWTON-SAMUEL**JAMES PLIMPTON AWARD*****Physics***

Established in honor of Professors Lawton and Plimpton, this award is presented to a student who has shown improvement in scholarship, not only in grades but also in depth of understanding.

LINCOLN ARC WELDING FOUNDATION AWARD***Civil and Environmental Engineering***

This award recognizes outstanding achievement in solving design, engineering, fabrication, and research problems.

MEDWIN HONORS STRING QUARTET SCHOLARSHIP***Humanities and Arts***

Scholarship money is given to the members of the Medwin Honors string Quartet (4 string players, 2 violins, 1 viola, 1 cellist), who are selected by audition each year.

THE ALFRED R. AND JANET H. POTVIN AWARD***Biomedical Engineering***

Separate awards are given to the outstanding undergraduate and graduate student in Biomedical Engineering in recognition of their academic performance and their service to WPI and/or the outside community.

**CARL F. MEYER IMPROVEMENT AWARD
IN CIVIL ENGINEERING*****Civil and Environmental Engineering***

Established by Professor Emeritus Meyer, this award is presented to the civil engineering senior who has demonstrated the most improvement in academic and professional attitude since entering the department.

RICHARD V. OLSON AWARD***Mathematical Sciences***

Established to honor the memory of mathematics Professor Richard V. Olson, this annual award to a WPI sophomore recognizes outstanding performance in basic mathematics courses.

EDWARD C. PERRY AWARD***Mechanical Engineering***

This award is given annually to an engineering student or students for an outstanding major qualifying project in the area of mechanical design. The award is made possible through a bequest from Miriam Perry Goll and honors the memory of her father, Edward C. Perry '04, a design engineer with General Electric Company throughout his professional career.

PI TAU SIGMA AWARD FOR EXCELLENCE***Mechanical Engineering***

The mechanical engineering honor society, Pi Tau Sigma, presents this award to the outstanding junior mechanical engineering student.

ROBOTICS ENGINEERING OUTSTANDING JUNIOR AWARD

Robotics Engineering

This award is presented to a robotics engineering junior who has an excellent academic record and who shows promise for continuing success.

ROBOTICS ENGINEERING OUTSTANDING SENIOR AWARD

Robotics Engineering

This award is presented to one or more robotics engineering seniors who have an outstanding record and who have contributed to the enrichment and professional development of fellow students.

SENIOR MATHEMATICAL SCIENCES MAJOR AWARD

Mathematical Sciences

This award is presented to the senior mathematical sciences major who has shown outstanding performance and who has made valuable contributions to the WPI mathematical community.

SOCIETY OF MANUFACTURING ENGINEERING SCHOLARS AWARD

Mechanical Engineering

An SME Student Chapter member, recommended by the faculty and confirmed by the officers of SME chapter 25, who has demonstrated excellent scholarship, leadership, service, potential to contribute to the profession of Manufacturing Engineering.

The award includes scholarship assistance (\$900) for full-time study if the winner enrolls in WPI's graduate MFE program.

SOCIETY OF MANUFACTURING ENGINEERING UNDERGRADUATE SCHOLARSHIP AWARD

Mechanical Engineering

Awarded to a 1st, 2nd, or 3rd year SME Student Chapter member, recommended by the faculty and confirmed by the officers of SME chapter 25, who has demonstrated excellent scholarship and commitment.

SOCIETY OF MANUFACTURING ENGINEERS OUTSTANDING STUDENT AWARD

Mechanical Engineering

Awarded to the top three SME Student Chapter members each year, regardless of year, who have not already received the award.

SOCIETY OF MANUFACTURING ENGINEERS

MQP AWARD

Mechanical Engineering

An SME Student Chapter member, selected by a panel of practicing manufacturing engineers to have the best MQP in the area of Manufacturing Engineering.

STUDENT-ALUMNI INTERACTION AWARD

Alumni Office

This award is presented by the WPI Alumni Association in recognition of individuals who, through their involvement on campus, have facilitated the continuing development of interaction between students and alumni. Recipients are full-time undergraduate students who have demonstrated extraordinary personal commitment to WPI and the Alumni Association above and beyond the normal involvement on campus.

The award is designed to recognize students who have stepped forward to become leaders in the alumni and student communities and, in doing so, have benefited both WPI students and alumni in a unique and purposeful way.

CHARLES O. THOMPSON SCHOLARS

Academic Advising

Named in honor of the first president of WPI, this honor recognizes outstanding performance by first-year students.

To be eligible for membership, students must receive all A's and B's, with a minimum of six A's, in their academic subjects during the first three terms at WPI. Selections are made in Term D.

A cash award is presented to the outstanding first year student. Charles O. Thompson Scholars are eligible to apply for this award by submitting an essay to the Office of Academic Advising during D Term.

ACS UNDERGRADUATE AWARD IN ANALYTICAL CHEMISTRY

Chemistry and Biochemistry

Award which is intended to encourage student interest in analytical chemistry and to recognize a student who displays an aptitude for a career in the field. This award is for third-year students.

WALL STREET JOURNAL AWARD

School of Business

The Wall Street Journal presents this award to a senior with an outstanding record of achievement.

ENGINEERING SOCIETIES

All engineers are professionals in accordance with the definition of engineering, one of which states that “engineering is the profession in which a knowledge of the mathematical and natural sciences gained by study, experience and practice is applied with judgment to develop ways to utilize, economically, the materials and forces of nature for the benefit of mankind.” Professional engineers also observe a code of ethics, exercise judgment and discretion while providing their services, and are involved in a confidential relationship with their clients. Professional engineers enjoy legal status, use professional titles, and associate together through professional societies.

An excellent way to begin learning about the status of the professional engineer is to join the student branch of a professional society relevant to your interests. At WPI, students are encouraged to join the student branches of such societies as the American Society for Metals (ASM), American Society of Mechanical Engineers (ASME), the Institute of Electrical and Electronic Engineers (IEEE), the American Society of Civil Engineers (ASCE), the American Institute of Chemical Engineers (AIChE), the American Institute of Aeronautics and Astronautics (AIAA), the Association of Computing Machinery (ACM), the American Nuclear Society (ANS), the Institute of Industrial Engineers (IIE), the Society of Automotive Engineers (SAE), the Society of Manufacturing Engineers (SME), the Society of Fire Protection Engineers (SFPE), the Society of Women Engineers (SWE), the American Chemical Society (ACS), and the Society of Hispanic Professional Engineers (SHPE). For information on these organizations, see the appropriate department head.

ENGINEERING REGISTRATION AND LICENSING

In order to become a “Professional Engineer” (P.E.) and enjoy the legal status which affords certain rights, privileges and responsibilities, engineers must qualify through the formal procedures of registration and licensing. Procedures vary from state to state, but in most cases, the applicant must pass a Fundamentals of Engineering Examination.

FUNDAMENTALS OF ENGINEERING EXAMINATION

To become legally registered as a professional engineer (P.E.), candidates must submit data regarding formal education and technical ability to the appropriate state Board of Registration for Professional Engineers. Two major examinations, The Fundamentals of Engineering Examination (also called Engineering-in-Training, E.I.T.) and the Professional Practice Examination (P.P.E.), must be successfully completed as a measure of technical ability. The Fundamentals Examination

must be taken first; the Professional Practice Examination must then be taken after a designated period of substantial professional experience, usually a minimum of four years. File applications for E.I.T. by January 1. The E.I.T. Examination will be given in mid-April and late-October. File applications for Professional Practice Examinations (P.P.E.) six months in advance.

There are several possible qualification paths to registration as a P.E. The quickest and most common route is to obtain a degree from an ABET (Accreditation Board for Engineering and Technology-formerly ECPD) accredited curriculum, and to acquire the specified amount of suitable professional level experience in addition to passing the two examinations mentioned above. There are seven ABET accredited curricula at WPI-biomedical engineering, civil engineering, chemical engineering, electrical and computer engineering, manufacturing engineering, industrial engineering, and mechanical engineering. Persons with an unaccredited degree can still become registered in most, but not all, states by submitting evidence of a longer “apprenticeship” period (variable by states) before taking the two examinations. Students should strive, if at all possible, to pursue a program which is accredited by ABET and should work closely with their advisors and appropriate major departments to assure that the total program qualifies for accreditation, since this will greatly facilitate the achievement of registration in the future.

ALL SENIOR ENGINEERING MAJORS IN BME, CE, CHE, ECE, AND ME ARE URGED TO TAKE THE FUNDAMENTALS OF ENGINEERING EXAMINATION WHICH IS GIVEN ON CAMPUS EACH FALL AND SPRING. There will never be a better time!

Refresher courses for students, alumni and practicing engineers are available. Successful completion of this examination is normally the first step in eventually obtaining the right to use the initials “P.E.”

WPI’s Office of Continuing Education sponsors an eleven session EIT Refresher course from mid-January through mid-April on the WPI Campus. The course, which is taught by WPI faculty, includes reviews of the major topics covered on the exam. For further information, call 508-831-5517.

DESCRIPTION OF FUNDAMENTALS OF ENGINEERING EXAMINATION (F.E.E.)

Typical Date Given: Last Saturday in October (also in April).

Typical Application Deadline: First week in September (also in January).

Duration: Eight hours.

Type: Multiple choice, open book.

CAREER DEVELOPMENT AND GRADUATE SCHOOL

Career Development Center	206
Graduate Study at WPI	207

SECTION 6

CAREER DEVELOPMENT CENTER

The Career Development Center (CDC) at WPI is here to assist students in the development of life-long skills related to careers and the job search process. CDC serves not only undergraduate students but graduate students and alumni as well. Information and guidance is provided in the areas of full-time employment, graduate school, part-time employment, cooperative education and summer positions.

The Career Development Center (CDC) provides a variety of services to students including the following:

1. **INDIVIDUAL CAREER COUNSELING** – Students can arrange to meet a Career Counselor by appointment or during walk-in hours. Help is provided in many areas including assistance with major selection, making career choices, resumes and cover letters, devising a job search plan, interviewing and applying to graduate school.
2. **CAREER RESOURCE CENTER** – CDC maintains literature and information about various companies that recruit on campus so that students will be well prepared for their interviews and have a reasonably good idea whether they would be interested in a particular company. CDC also provides vocational resources for students researching and exploring various careers. In addition, it includes WPI major binders to learn more about what you can do with a WPI major. For those students considering graduate school, the center provides information on the graduate school search process, graduate education at WPI and elsewhere. The center also houses general information on standard examinations required by many graduate schools such as the Graduate Record Exam (GRE), Graduate Management Admission Test (GMAT), Medical College Admission Test (MCAT), and Law School Admission Test (LSAT).
3. **CAREER FAIRS** – Each year the CDC organizes three career/job fairs for students to obtain information of full-time, part-time, summer and co-op opportunities.
4. **CAREER WORKSHOPS & SEMINARS** – Throughout the year a variety of workshops are offered to students. Topics have included: Resume/Cover Letters, Job Search Strategies, Summer Job Search, Job Offer Decision Making, and Applying to Graduate School.
5. **COMPANY PRESENTATIONS** – Information sessions are provided by recruiters so that students have an opportunity to evaluate and learn more about the companies interviewing on campus.
6. **JOB LISTINGS** – The CDC posts full-time, part-time, summer and co-op opportunities. Students and alumni can access job listings through the CDC's web-based system.
7. **ON-CAMPUS INTERVIEWS** – Annually the CDC brings companies to campus to interview students. Over 200 private, government, civic and professional companies and organizations have participated in this program. Employers interview for summer, co-op or full-time employment. To give you an idea, here are a few organizations which have employed WPI graduates in recent year:
 - Abbot Laboratories & Bioresearch Center
 - Avery Dennison
 - BAE Systems
 - EMC Corporation
 - ExxonMobil
 - Fidelity Investments
 - General Dynamics
 - General Electric
 - IBM
 - Microsoft
 - MIT Lincoln Laboratory
 - Raytheon
 - The MITRE Corporation
 - Umass Medical School
8. **RESUME REFERRAL** – Students can house their resume in the CDC's web-based system. Employers can access students' resumes in two ways, a web resume book or referrals by the CDC for specific positions.
9. **GRADUATE STUDIES** – The Career Development Center (CDC) and the graduate coordinators in each department can provide information on graduate education at WPI or elsewhere.
10. **ALUMNI ASSISTANCE** – After students graduate from WPI, the CDC provides assistance to alums seeking new employment or facing a change in career goals.

LOCATION: The Career Development Center is located in the Lower Level of the Project Center. The phone number is 508-831-5260. The website is www.wpi.edu/+CDC

INTRODUCTION

WPI offers more than fifty graduate degree programs that enable students to deepen and enrich their understanding of a field, and to develop their professional expertise.

GRADUATE PROGRAMS BY DEPARTMENT**Biology and Biotechnology**

- Master of Science in Biology/Biotechnology*
- Ph.D. in Biotechnology

Biomedical Engineering

- Master of Science in Biomedical Engineering
- Master of Engineering in Biomedical Engineering
- Master of Engineering in Clinical Engineering
- Ph.D. in Biomedical Engineering
- Joint Ph.D. in Biomedical Engineering and Medical Physics with UMass Medical School
- Graduate Certificate

Business, School of

- Master of Business Administration (M.B.A.)
- Master of Science in Information Technology
- Master of Science in Marketing and Technological Innovation
- Master of Science in Operations Design and Leadership
- Graduate Certificate

Chemical Engineering

- Master of Science in Chemical Engineering
- Ph.D. in Chemical Engineering

Chemistry and Biochemistry

- Master of Science in Chemistry
- Master of Science in Biochemistry
- Ph.D. in Chemistry
- Ph.D. in Biochemistry

Civil and Environmental Engineering

- Master of Science in Civil Engineering
- Master of Science in Environmental Engineering
- Interdisciplinary Master of Science in Construction Project Management
- Master of Engineering in Civil Engineering
- Ph.D. in Civil Engineering
- Graduate Certificate
- Advanced Certificate

Computer Science

- Master of Science in Computer Science
- Master of Science in Computer Science Specializing in Computer and Communications Networks (CCN)
- Ph.D. in Computer Science
- Graduate Certificate
- Advanced Certificate

Electrical and Computer Engineering

- Master of Science in Electrical and Computer Engineering
- Ph.D. in Electrical and Computer Engineering
- Graduate Certificate
- Advanced Certificate

Fire Protection Engineering

- Master of Science in Fire Protection Engineering
- Ph.D. in Fire Protection Engineering
- Graduate Certificate
- Advanced Certificate

Interdisciplinary Studies

- Master of Science in Interdisciplinary Studies
 - Impact Engineering
 - Manufacturing Engineering Management
 - Power Systems Management
 - Systems Engineering
 - Systems Modeling
- Ph.D., Interdisciplinary Studies

Manufacturing Engineering

- Master of Science in Manufacturing Engineering
- Ph.D. in Manufacturing Engineering
- Graduate Certificate

Materials Process Engineering

- Master of Science in Materials Process Engineering

Materials Science and Engineering

- Master of Science in Materials Science and Engineering
- Ph.D. in Materials Science and Engineering
- Graduate Certificate

Mathematical Sciences

- Master of Mathematics for Educators (M.M.E.)
- Master of Science in Applied Mathematics
- Master of Science in Applied Statistics
- Professional Master of Science in Financial Mathematics
- Professional Master of Science in Industrial Mathematics
- Ph.D. in Mathematical Sciences
- Graduate Certificate

Mechanical Engineering

- Master of Science in Mechanical Engineering
- Ph.D. in Mechanical Engineering
- Advanced Graduate Certificate

Physics

- Master of Science in Physics
- Ph.D. in Physics

Robotics Engineering

- Master of Science in Robotics Engineering
- Ph.D. in Robotics Engineering
- Graduate Certificate

Social Science and Policy Studies*

- Master of Science in System Dynamics
- Interdisciplinary Ph.D. in Social Science
- Graduate Certificate in System Dynamics

Systems Engineering

- Master of Science in Systems Engineering

* Fall semester admission only.

At WPI, the Master of Engineering degree is rooted in practice; its aim is to cultivate advanced professional and technical competence. It does not require a thesis and is most appropriate for students who plan pursue careers in industry.

The Master of Science has a stronger theoretical component than the Master of Engineering degree. Its aim is to prepare students for careers in research and development or academia. The M.S. is the more natural precursor to the Ph.D., although students with an M.Eng. can also successfully obtain this credential. WPI offers both thesis-based and non-thesis Master of Science degrees.

The Ph.D. indicates that a student has undertaken original research and has demonstrated mastery of his or her field through the completion of a substantial project. Ph.D. students

present their research findings in a dissertation that is subject to review by the faculty and, in some cases, by professional peers outside of WPI.

WPI's M.B.A. program takes advantage of the Institute's technical and scientific strengths. It places a strong emphasis on the management of scientific and technological concerns. Some of the key areas of study are technology transfer, information security, operations management, and entrepreneurship.

Finally, the Professional Master of Science and the Master of Mathematics for Educators degrees are akin to the Master of Engineering degree in that they are practice-oriented in both conception and scope.

Further information and the specific requirements for these advanced degrees may be found in the Graduate Catalog (<http://www.wpi.edu/+gradcat>).

ADMISSION

Prospective graduate students are encouraged to discuss their academic plans with the graduate coordinator of their desired program.

Students may take graduate courses without being formally admitted to a degree program; that is, as a non-matriculating student. But each department limits the number of courses a non-matriculating student may count towards a degree. In the School of Business, for example, students may not take more than two courses before applying for admission. In some other programs, a student may complete as many as four courses without being admitted. No department permits a student to complete more than four courses before a formal admission decision has been made. If you plan to enroll in classes as a non-matriculating student, be sure to contact your department to learn what restrictions have been placed on course work completed before admission to a degree program.

Students should contact the Office of Graduate Admissions (grad@wpi.edu) if they have questions about their application or the application process. In general, each department requires its applicants to submit a completed application, original transcripts of all previous academic work, and three letters of recommendation. The Graduate Record Examination (GRE) is required in some programs and strongly recommended in others. The Graduate Management Admission Test (GMAT) is required of all applicants to programs in the School of Business. Be sure to check the website for your program to learn its application requirements.

Once a student's application is complete, the Office of Graduate Admissions sends it to the department for review. When the faculty have reached a decision, the Office of Graduate Admissions will notify the student with a formal letter. Decisions are usually rendered four to six weeks after the application has been completed.

Applications for graduate study are accepted year-round. WPI alumni and current WPI undergraduate students are exempt from the \$70 application fee.

REGISTRATION AND TUITION PAYMENT

Registration for graduate courses begins several months before the beginning of each semester. Students are encouraged to register for their courses as early as possible.

Tuition for courses taken by graduate students is \$1,159 per credit hour for the 2010-2011 academic year. Undergraduate

courses listed as "one-third unit" are equivalent to two graduate credit hours.

Tuition and fees, including health insurance, must be paid before the start of classes.

COMBINED BS/MS PROGRAMS

For information on combined BS/MS programs, see page 193.

FINANCIAL AID

INTRODUCTION

Prospective graduate students who wish to be considered for WPI assistantships and fellowships are strongly advised to submit their applications by January 15th for Fall admission and October 15th for Spring admission. Assistantships and fellowships typically include full or partial remission of tuition and a monthly stipend. Only full-time graduate students are considered for assistantships and fellowships and preference is given to students who are actively conducting research. Students indicate that they want to be considered for funding on their graduate application forms. There is no separate application for assistantship or fellowship support at WPI.

ASSISTANTSHIPS

There are two types of assistantships at WPI. Teaching assistants support the faculty in the grading of papers, the supervision of laboratory sections, and other teaching duties. Research assistants, on the other hand, are usually given some facet of a larger sponsored-research project that typically becomes a part of the student's thesis or dissertation. Fellowship assignments are made by the faculty in each department and are approved by the Office of the Provost.

WPI FELLOWSHIPS

Several fellowships are available for students in particular departments and through endowed funds.

Competition for the prestigious Godard Research Fellowship takes place during the admissions process. Candidates are nominated by the departments and the final selection takes place in the Office of the Provost. The competition is only open to U.S. citizens, and preference is given to students pursuing the Ph.D. degree.

The Backlin Fund provides assistance for students nearing the end of their degree programs. Candidates are nominated by their department chairs and selection is made by the Associate Provost for Academic Affairs.

A complete list of WPI funding sources can be found at <http://grad.wpi.edu/Prospective/fellowships.html>.

NSF GRADUATE RESEARCH FELLOWSHIPS

The National Science Foundation awards multi-year fellowships to promising science and engineering students in the early stages of their graduate careers. These highly-competitive, prestigious awards provide three years of support and are available to both Master's and Ph.D. students, as long as the degree is research-based. You can learn more at the NSF website: <http://www.nsf.gov/funding/>.

GEM FELLOWSHIPS

WPI is a member of the GEM consortium. Students who belong to underrepresented minority groups and want to pursue the Master's or Ph.D. degree in a field of science or engineering may apply for funding from the consortium to continue their

studies at a GEM member school. More information can be found at the GEM website: <http://www.gemfellowship.org/>.

LOANS

Graduate students may also receive additional financial assistance in the form of federal and private student loan funds. In order to apply for these loans, students are required to submit the Free Application for Federal Student Aid (FAFSA) form. This form can be completed online at www.fafsa.gov. For more information you can contact the Office of Financial Aid website at <http://www.wpi.edu/+finaid>.

SCHOLARSHIPS AND GRANTS FOR GRADUATE STUDY ABROAD

RHODES SCHOLARSHIPS

Rhodes scholarships cover tuition, fees, and a stipend for two years of study in selected fields of science and engineering at Oxford University. They are awarded through state and regional competitions. Students interested in applying for a Rhodes Scholarship should begin to assemble their dossier during the Junior year. Applicants should have completed enough of the Bachelor's degree to assure its completion before their projected matriculation at Oxford. For more information, contact Prof. Peter Hansen in the Department of Humanities and Arts.

FULBRIGHT GRANTS

A wide variety of grants for graduate study abroad, usually for research toward the doctorate, is available through the federally-funded Fulbright Grants Program. For more information, contact Prof. Peter Hansen in the Department of Humanities and Arts.

PART-TIME GRADUATE PROGRAMS: ONLINE AND CAMPUS-BASED STUDY

Part-time graduate programs provide flexible educational opportunities for working students. Online, evening, and on-site corporate programs are taught by WPI faculty to serve the educational needs of technical and management professionals around the world.

Master of Science degrees for part-time students are offered in applied math, applied statistics, chemistry and biochemistry, computer and communications networks, computer science, financial math, industrial math, information technology, management, marketing and technological innovation, manufacturing management, operations design and leadership, physics, and system dynamics. The part-time MS is also offered in biomedical/clinical engineering, electrical and computer engineering, fire protection, manufacturing, materials science, mechanical engineering, and robotics engineering. The Master of Engineering degree can be completed part-time in biomedical, civil and environmental engineering. The Master of Business Administration (M.B.A.) is also offered on a part-time basis.

Graduate-level certificate programs are also available in some departments. For more details, see the Graduate Catalog.

Although the number of courses in each discipline may be limited in any given year, courses are scheduled so that part-time students are generally able to complete the requirements for the master's level degree in three to four years. Online and evening courses are offered year-round.

Students may enroll in individual graduate courses without being admitted to a graduate degree program. Those who wish to obtain a degree must apply for formal admission prior to completing two courses for graduate certificate programs and four courses for master's degree programs. Exceptions to this rule exist, so interested students should verify the actual number of courses they may take prior to matriculation within the specific program department.

A more detailed description of the part-time programs and of specific course offerings is available in the Graduate Catalog. Questions about each program should be related to the department heads or the graduate coordinators.

FIVE YEAR PROGRAMS

WPI offers unique five-year programs in Fire Protection Engineering, Industrial Mathematics, and Financial Mathematics. Each program begins with admission to the freshman year at WPI and ends with both a Bachelor's and Master's degree following five years of study.

High school students indicate their interest in one of these programs when they apply for admission to the undergraduate program at WPI. Applicants who are accepted into one of these programs will receive a letter of admission to both the undergraduate and graduate programs. Students in these programs are strongly urged to major in a field closely related to the graduate degree program. For example, most students choosing the Fire Protection Engineering program will have an undergraduate major in Mechanical or Civil Engineering. An academic advisor will assist students in course selection. Admission to the fifth year of study (i.e., the graduate program) is contingent on successful completion of the undergraduate degree and good academic standing.

For more information about these programs, contact the graduate coordinators or administrators in the Departments of Mathematics or Fire Protection Engineering.

GRADUATE COURSE LISTINGS

Graduate courses of interest to undergraduates are listed by title in the "Course Description" section of this catalog. A complete list is included in the graduate catalog. Most courses meet once per week in a fourteen-week format. The credits applied in either case are as shown to the right of the course title. Undergraduate students taking graduate courses may use the conversion factor: 1 graduate credit = 1/6 undergraduate unit. Students register for research or projects by using an individual program number rather than a course designation.

FOR MORE INFORMATION ON GRADUATE STUDY AT WPI

Consult the graduate catalog for more information about WPI's graduate programs. The departmental graduate coordinators are available to answer any program-specific questions you may have.

For more information about applying to WPI's graduate programs, please contact:

WPI Office of Graduate Admissions

www.grad.wpi.edu

ADMISSION, EXPENSES, FINANCIAL AID AND HOUSING

Admission to WPI	211
Expenses	214
Financial Aid	216
Housing	221

SECTION 7

INTRODUCTION

At WPI, our goal is to attract and select students who will be successful in our academic program, will take full advantage of all the university has to offer, and will enhance the WPI community. The WPI admissions staff treats every application individually, and strives to make sure our evaluation process is balanced and thorough. Selection for admission is based upon such factors as the secondary school record; recommendations by counselors and teachers; standardized test scores; out-of-class activities; work experience; and leadership endeavors. All candidates are invited to submit any supplementary material which they believe will aid the admissions committee in evaluating their application.

VISITING THE CAMPUS

Through research and reading, you can learn a lot about a college. But the best way to determine if WPI is a good match for you is by visiting the campus. We have many visit options for you and your family, designed specifically to give you a firsthand look at WPI residence halls, classes, facilities, faculty, and students.

Daily Visit Options

The best way to experience WPI firsthand is to visit campus. We strongly encourage students and their families to come to our beautiful campus to participate in the many options we offer for prospective students to observe campus life, talk with staff and students, get to know our community better, and have all of your important questions answered.

Visits to WPI last just over two hours and include an information session—conducted by an Admissions staff member and Admissions student intern—and a campus tour led by a WPI student.

Our morning visit begins at 9:30 a.m. and afternoon visit begins at 1 p.m. (On certain high volume visit days a third time option is added.)

Personal Interviews

WPI offers personal interviews on campus for rising seniors beginning March 15 through December 15 (Early Action Round I candidates must complete their interview by November 1). While interviews are not required, they can be helpful both for the admissions office and the applicant. A summary of the interview will become part of a candidate's admission file and may influence the admission decision we make.

Lunch

If you are on campus at noontime during the week, join other visitors and a current student for lunch in one of the dining halls (prospective students eat for free).

Saturday Visits

Join us on Saturdays in the fall (no appointment needed) in mid-September to mid-December (with the exception of the Saturday after Thanksgiving) and in the spring from the end of March to the end of April, for a campus tour and information session.

Admissions Office Hours

8:30–5:00, Monday–Friday (8:00–4:00, mid-May through the end of August)

Holiday Schedule

The university will be closed on Labor Day, the Thanksgiving holiday (Wed-Fri), Christmas Eve through New Year's Day, Martin Luther King Day, and Memorial Day.

Whatever option you choose, you can learn more about a campus visit by calling the Office of Admissions at (508) 831-5286. Our receptionist and visit coordinator will be happy to assist you. We encourage you to also check periodically check the WPI Undergraduate Admissions Office at admissions.wpi.edu as options may change.

ADMISSIONS REQUIREMENTS

The basic academic requirements for freshman applicants include four years of English, four years of math (including pre-calculus), and two years of lab science.

Other application requirements for the evaluation process include a high school transcript (including senior year grades), recommendations from a science or math teacher and a guidance counselor, a personal essay, and SAT or ACT scores or alternative materials through the WPI Flex Path option*. For international students whose first language is not English, the TOEFL or IELTS exam is also required.

**In lieu of standardized test scores, students may choose the WPI Flex Path option. See below.*

APPLYING TO WPI

WPI is a member of the Common Application, and the Common Application is the exclusive method by which to apply to WPI. We accept the electronic or paper version of the Common Application. Please note the WPI supplement form is required for all submissions. Although the vast majority of entering freshmen matriculate in September, WPI will consider freshmen in January on a case-by-case basis. Candidates for the September term should file their application by no later than February 1. Freshman candidates for admission to the January term should file their applications by November 15.

STANDARDIZED TESTS/WPI FLEX PATH OPTION

First year candidates who wish for their test scores to be considered for admission must register to take the SAT or ACT prior to the application deadline chosen. Candidates who wish to have their test scores considered can arrange to have their scores submitted directly to WPI by either the College Board or ACT. The WPI code number is 3969 for the College Board tests and 1942 for the ACT test.

WPI is test optional. Applicants are welcome to submit the WPI Flex Path in lieu of test scores (or in addition to). Those who choose the WPI Flex Path option should submit alternative materials that they believe will better reflect their potential for success at WPI and are encouraged to submit examples of academic work or extracurricular projects that reflect a high level of organization, motivation, creativity and problem-solving ability.

FINANCIAL AID

Students applying for financial aid should check the appropriate box on the application for admission. Financial aid candidates should submit the College Scholarship Service (CSS) PROFILE Application and the Free Application for Federal Student Aid (FAFSA), which are available online at www.collegeboard.com and www.fafsa.gov. For regular admission applicants, these forms should reach the WPI Office of Financial Aid by February 1. It is recommended that students applying for Early Action should submit the completed PROFILE to the College Scholarship Service by early November. Financial Aid is available for U.S. citizens and/or permanent residents of the U.S. A limited amount of need-based financial aid is available

for International Students which is administered through the WPI Admissions Office. In order to apply for need based assistance, international students need to complete the Foreign Student Financial Aid Application which may be obtained at the WPI Office of Admissions or online at wpi.edu/Admin/FA/International/.

APPLICATION FEE

A \$60 application fee is required for all applicants. WPI endorses the fee waiver policy of the College Entrance Examination Board.

NOTIFICATION

All candidates for admission will receive an acknowledgment of the receipt of their application. Should applicants fail to receive this acknowledgment within four weeks, they are encouraged to check with their high school guidance office or the Office of Admissions at WPI. Admissions decisions will be mailed to all applicants no later than April 1.

DECISION TO MATRICULATE

Accepted candidates must inform the college by May 1, the common reply date, of their decision to matriculate by returning a \$500 non-refundable tuition deposit along with the Enrollment Form.

EARLY ACTION

Students may apply to WPI early and receive early notification of their admissions decision under the Early Action plan. The plan is as follows:

1. Candidates should check an Early Action box on the application.
2. The completed application for admission must be submitted by November 10 for Round 1, or by January 1 for Round 2.
3. The admissions committee will review all early action applications and notify all candidates of their decisions by December 10 for Round 1 or by February 10 for Round 2. Early action is a non-binding admissions plan. Accepted students have until May 1 to submit a \$500 non-refundable tuition deposit and enrollment form.
4. Admitted early action candidates who are applying for financial aid will receive notification regarding eligibility for aid soon after their financial aid forms are submitted and complete.

ADVANCED PLACEMENT

WPI awards credit to students who score a score a “4” or “5” on the Advanced Placement Examinations. The Office of Academic Advising will notify such students of their earned credit by mail to the home address during early August. You can visit the Academic Advising web site (wpi.edu/Admin/OAA) for a complete list of AP credits for exams taken or call (508) 831-5381.

Humanities

The Humanities and Arts Department will accept a maximum of 1/3 unit of AP credit towards the Humanities and Arts requirement. Students who score a 4 or 5 on the AP test in German or Spanish automatically receive 1/3 unit of credit in the language, provided they do not begin German or Spanish study at WPI with Elementary German I (GN 1511) or Elementary Spanish II (SP 1523). Students who score a 4 or 5

on the AP test in studio art may be eligible for HUA credit, subject to a portfolio review by art faculty. Students who score a 4 or 5 on the AP test in other subject areas of the humanities and arts will receive credit in the relevant discipline. AP credit beyond one course (1/3 unit) in the Humanities and Arts may be counted toward other requirements such as free elective credit or particular majors and minors at WPI.

Computer Science

Students who pass the Computer Science A exam with a “4” or “5” will be awarded 1/3 unit for CS 1000.

Natural Sciences

Students who pass the advanced placement test in Biology or Physics B with a “4 or 5” will be awarded 1/3 unit of advanced placement credit. This credit will show on the transcript as “L”. For students who score “4 or 5” in Physics C (Mechanics) will be awarded 1/3 credit in Physics 1110/ 1111. Students who score “4 or 5” in Physics C (Electricity and Magnetism) will be awarded 1/3 advanced placement credit for Physics 1120/1121. For those students who pass Physics B will be awarded 1/3 credit in Physics 1000. Students who score 4/5 on the Chemistry Advanced Placement Examination or 6/7 on the Chemistry International Baccalaureate Exam are automatically awarded 1/3 unit of credit for CH 1010. In addition, any student can earn credit for the general chemistry courses, CH 1010-1040, by achieving scores of 70 or better on course-specific examinations offered by the Department of Chemistry and Biochemistry. Exams must be taken in the order in which the courses are offered, and a student may not take any exam past the first failed exam. For example, a student who passes the CH 1010 exam but fails the CH 1020 exam is not eligible to take the CH 1030 exam. This student will receive credit for CH 1010 only. Students who receive AP or IB credit for CH 1010 are eligible to take the CH 1020 exam without having first passed the CH 1010 exam. Note this policy applies only to WPI students.

Mathematics

Students who pass the AB mathematics examination with a “4” or “5” will be awarded 2/3 unit of advanced placement credit for MA 1021 and MA 1022. Students with a “4” or “5” on the advanced placement BC exam will be awarded 1 unit advanced placement credit for MA 1021, MA 1022 and MA 1023.

In the four-course 1021-1024 mathematics sequence, students who arrive at WPI with a one-year high school calculus course, prepared to start with the second (or third) course in the WPI sequence, and who successfully pass that course and the one that follows it in sequence, will be considered to have established advanced placement credit for the first one (or two) courses. To qualify for the credit, the advanced WPI courses must be passed the first time in sequence in A- and B-term of the student's first year. The courses credited retroactively will be listed by number without an assigned grade and will count toward the distribution requirement in mathematics.

Transfer students are not eligible to obtain math credit under this policy.

Project Lead The Way (PLTW)

WPI awards credit to students who completed a Project Lead The Way course in a PLTW-certified high school, received a minimum of a “B” in the course, and scored 70% or higher on the PLTW college credit exam. WPI also honors PLTW

transfer credits from other PLTW University Affiliates, such as RIT. Please visit the WPI Project Lead The Way web site (wpi.edu/+pltw) for more information and to apply for credit. The PLTW Program Manager will notify students of their earned credit.

NEW STUDENT ORIENTATION

During the week prior to classes, the Campus Center and Student Activities Department coordinates a comprehensive new student orientation program for all first-year and transfer students. New student orientation provides an introduction to the WPI experience, ranging from academic work and expectations and project-based education, to student life and campus activities. Led by upperclass student team leaders and faculty advisors, new students to WPI attend team meetings that are designed to familiarize them with the overall campus environment.

READMISSION

Students who were formerly at WPI but left before completing undergraduate study and now wish to apply for readmission should contact the Registrar's Office for information and forms. The official points of entry are A-term or C-term. Completed readmission forms must be received by WPI no later than the following due dates in order to be acted upon for entrance in the indicated term:

July 20 for Term A November 15 for Term C

If possible, candidates should also plan on an interview with the Director of Academic Advising and with a departmental consultant in their intended major area of study prior to filing the readmission form.

TRANSFER STUDENTS

The WPI Plan provides some advantages that are particularly attractive for transfer students. Transfer applicants should furnish official transcript(s), an autobiographical statement and a math or science teacher recommendations in addition to the application for admission. The priority deadline for receipt of applications for entrance in September is April 15. The deadline for admission for January entrance is November 15. Applicants are encouraged to submit their applications as early as possible. A minimum of eight units *must* be completed satisfactorily in residence at WPI. (It is anticipated the normal residence at WPI will be 16 terms.)

TRANSFER AGREEMENT

WPI currently holds formal articulation agreements with specified programs of study at Bristol Community College, Mass Bay Community College, and Quinsigamond Community College. However, WPI will grant appropriate transfer credit on a case-by-case basis from any properly-accredited two-year or four-year institution.

HUMANITIES AND ARTS REQUIREMENT FOR TRANSFER STUDENTS

All transfer students should review their humanities and arts record and plan with the Humanities and Arts Department's coordinator for transfer students (J. Hanlan - SL23), who will determine for students the transfer credit applicable towards the Humanities and Arts Requirement.

All transfer students entering WPI with fewer than two units of humanities and arts credit must complete thematically related work in humanities and arts at WPI, including an inquiry seminar or practicum to the extent that the overall humanities and arts credit totals two units. The Humanities and Arts Requirement is considered fulfilled for transfer students who have completed the equivalent of two units of humanities and arts work prior to their matriculation at WPI.

A Completion of Degree Requirement form must be submitted once the Humanities and Arts degree requirement has been satisfied.

Transfer students who have satisfied the Humanities and Arts degree requirement based on work completed at another school and who submit the Completion of Degree Requirement form as part of the transfer-credit posting process will have the Completion of Degree Requirement form and grade recorded without a fee. This process will normally take place prior to or during the first term of full-time enrollment at WPI.

INTERNATIONAL STUDENTS

The presence of international students serves as a means of strengthening the knowledge and understanding of foreign countries and cultures and is highly encouraged and supported at WPI. Programs and support services for international students and exchange programs are given high priority. As an institution of higher learning, WPI is dedicated to international education.

In addition to the standardized tests listed prior, international applicants must provide proof of English language proficiency. English language proficiency may be demonstrated by the official results of:

- TOEFL (Test of English as a Second Language)-Minimum score: 550 paper based or 79 internet based.
- IELTS (International English Language Testing System) 6.5 or higher with no band below 6.0.

International students whose score results are less than those above may still be conditionally admitted, with required attendance at WPI's English as a Second Language Program during the summer prior to enrollment.

THE ENGLISH AS A SECOND LANGUAGE (ESL) PROGRAM

The ESL Summer Institute is an intensive five-week non-credit course of study in English for specific purposes for conditionally-admitted international students and others whose first language is not English. This ESL program is designed to help prepare these international students for regular courses in engineering, science and technology before the regular academic year begins. A second intake is available for international students who desire only a head-start in preparation for such courses before the academic year begins.

For students who need additional support during the regular academic year, the ESL Seminar, a tutorial course designed to help the student further strengthen linguistic skills, is offered.

During the regular academic year, ESL for Spouses is a noncredit course offered to interested partners accompanying WPI students and professors.

ESTIMATED EXPENSES

Expenses for the 2013-14 year were not established at the time of this publication. They will be published via the web at a later date. For the 2012-13 year, the expenses were as follows:

Tuition	\$40,790
Social Fee	260
Health Fee	330
Total Tuition and Fees	\$41,380
Room (Typical Freshman Double)	7,220
Board (7-Day, 19-Meal Plan)	5,430
Books and Supplies (Estimated)	1,000
New Student Orientation Fee	200
	\$55,230

Basic tuition entitles full-time students to full academic and student services including counseling, placement and recreational facilities. Other costs must be anticipated, such as laundry, clothing, travel expenses, entertainment and personal expenses.

SPECIAL STUDENT

1/3 unit	\$3,399
1/6 unit	\$1,700
1/12 unit	\$ 850

Health insurance is required for all students. Students may waive their right to participate in the WPI health insurance plan if proof of comparable coverage is provided annually by completing a waiver online. For 2012-13, the cost was \$1,129 for the academic year.

PAYMENT OF TUITION DEPOSIT**ENTERING STUDENTS**

Payment of a nonrefundable \$500 deposit is required upon acceptance of admission to WPI. The \$500 will be credited to the student's tuition.

ENROLLMENT AND TUITION DUE DATES

Enrollment for students pursuing a baccalaureate degree will occur three times per year:

1. Fall semester-at the beginning of Term A.
2. Spring semester-at the beginning of Term C.
3. Summer session-at the beginning of Term E.

There will be no check-in at the start of Terms B and D, although a course change period will be available for students continuing from the previous term.

Special tuition features relative to Term E enrollment are available on the E-term web site at www.wpi.edu/academics/summer.

Bills are electronically mailed twice per year. Fall bills will be mailed in July and are due in August. Spring bills are mailed in December and due in January. All respective due dates are listed on the eBill.

FINANCIAL OBLIGATIONS, HOLDS, AND LATE FEES

The college reserves the right to hold grades, official transcripts, registration and/or diploma for any student who has an outstanding financial obligation with the college.

Late fees will be assessed on balances not paid by the due dates.

Failure to pay your financial obligation may result in the account being referred to an outside collection agency and reported to a credit bureau agency, which will negatively affect your credit rating. You will be responsible for all costs associated with the collection of this debt to the maximum amount allowed by Massachusetts general statutes.

OVERLOAD CHARGES

There will be a tuition surcharge on registration which contains academic overloads in excess of $2\frac{1}{3}$ (7/3) units per semester. Physical education and military science are not included in the determination of overloads. The overload charge will be based upon the total registration credit held by the student at the close of the initial course change period in B- and D-terms. (Please consult the Registrar's Office or the Office of the Bursar for current fees.) Fall overload billing will take place during Term B and spring overload billing during Term D. The current Term E charge system will not be affected.

TUITION CHARGES UPON WITHDRAWAL OR SUSPENSION

Charges upon formal withdrawal from the college during each semester are:

	Charge
1. Withdrawal after check-in but prior to first day of classes of the first term of a semester.	No Charge
2. Withdrawal within one week following first day of classes of the above term.	20% of tuition
3. Withdrawal within two weeks following first day of classes of the above term.	40% of tuition
4. Withdrawal within three weeks following first day of classes of the above term.	60% of tuition
5. Withdrawal prior to end of Add/Drop of the second term of a semester.	80% of tuition
6. Withdrawal after Add/Drop of the second term of a semester.	100% of tuition

To qualify for a reduction in charges, students must submit a formal withdrawal application via the Registrar's Office. The date this application is received in the Registrar's Office will determine the charge.

There is no reduction in charges in the case of withdrawal from individual courses.

Students who have paid full tuition for eight semesters may be allowed to enroll as special (part-time) students on a per-course basis and be charged tuition accordingly. (Two summer terms enrolled as a full-time student may be counted as a semester.) Application forms for Special Student status are available at the Registrar's Office.

Health insurance, health fee, and social fee are neither prorated nor refunded.

After all adjustments have been made, any balance due to WPI is payable immediately.

ROOM CHARGES UPON WITHDRAWAL OR SUSPENSION

Charge

- | | |
|---|-------------------------|
| 1. Withdrawal after check-in, but prior to the first day of classes. (Forfeiture of advance payment.) | No Charge |
| 2. Withdrawal after the first day of classes. | 100% charge of room fee |

BOARD CHARGES UPON WITHDRAWAL OR SUSPENSION

Charge

- | | |
|---|-------------------|
| 1. Withdrawal after check-in, but prior to the first day of classes. | No Charge |
| 2. Withdrawal within four weeks following the first day of classes. | 25% of board fee |
| 3. Withdrawal within eight weeks following the first day of classes. | 50% of board fee |
| 4. Withdrawal within twelve weeks following the first day of classes. | 75% of board fee |
| 5. Withdrawal after twelve weeks following the first day of classes. | 100% of board fee |

FINANCIAL AID UPON WITHDRAWAL/ SUSPENSION

Students who withdraw or are suspended from WPI and are receiving any type of financial will have their funding adjusted based on their official withdrawal/suspension date and institutional, federal, and state refund calculations. If federal funds are required to be returned to the Federal Department of Education, they will be returned before any other forms of aid and in the following order per federal guidelines: Unsubsidized Federal Direct Stafford Loan, Subsidized Federal Direct Stafford Loan, Perkins Loan, Federal PLUS Loan, Federal Pell Grant, and Federal Supplemental Educational Opportunity Grant. WPI Scholarships (merit and/or need based) and WPI Institute Loans are then reduced up to the amount of remaining credit sources. Because each refund calculation is unique to a student's withdrawal date, costs incurred and aid he/she is receiving, students are encouraged to contact the WPI Office of Financial Aid about their aid adjustments if they have any questions.

WPI is committed to assisting students and their parents in finding ways to finance the cost of a WPI education through financial aid assistance and private financing options. Central to WPI's program is the concept of financial need. This concept is based on the assumption that parents and students together accept the responsibility for educational expenses to the extent they are able. Over 94% of WPI undergraduates are receiving financial help from federal, state, and/or institutional resources (includes need and merit based aid). A combination of grants, loans and/or work study assistance from federal, state and WPI funding are allocated to students who demonstrate financial need. The proportion of grant, or "gift" assistance, versus loan and work, may be determined by the college on the following criteria: the magnitude of the financial need, the student's academic performance, and the availability of funds.

APPLICATION PROCEDURES

Students are required to file the Free Application for Federal Student Aid (FAFSA) and the CSS (College Scholarship Service) PROFILE Application. Students list WPI's school code number under the section on each form where it designates which schools are to receive the form. In addition, students and their parents are required to send to the WPI Office of Financial Aid a signed copy of their federal income tax forms (or a statement signed by the student/ parent indicating he/she will not file a return), schedules, and W-2 statements from the prior year if they are selected for verification*. In the case of separation or divorce, the student's noncustodial parent must complete the Noncustodial PROFILE.

EARLY ACTION APPLICATION FOR FINANCIAL AID

Applicants must indicate on their admission application they are applying for financial aid. For those students applying for early action admission, the CSS PROFILE Application (and Noncustodial PROFILE, if applicable) can be submitted as early as October 1st, but no later than February 1st. The FAFSA and the CSS PROFILE Application are available online at www.fafsa.gov and www.collegeboard.com. The FAFSA is required as soon after January 1st as possible.

Successful candidates for early action admission will be notified of financial aid eligibility on a rolling basis. Applicants will then have from the date of their aid eligibility letter until the candidates' common reply date, May 1st, to either accept or decline the aid offered.

REGULAR DECISION APPLICATION FOR FINANCIAL AID

Applicants must indicate on their admission application they are applying for financial aid. Successful candidates for admission will be notified of a financial aid decision in early April if a complete financial aid application has been submitted. Applicants will then have from the date of the financial aid decision until the candidates' common reply date, May 1st, to either accept or decline the aid offered.

To ensure a complete review, the WPI Office of Financial Aid must receive the FAFSA and the CSS PROFILE Application by February 1st. Applications completed after this date will be reviewed subject to available funding. The Office of Financial

Aid encourages students to complete the FAFSA and the CSS PROFILE Application (and Noncustodial PROFILE, if applicable), by the beginning of January to ensure that WPI's filing deadline of February 1st is met.

UPPERCLASS APPLICATION FOR FINANCIAL AID

Upperclass students who receive need based financial aid must reapply for financial aid every year by completing the FAFSA and the WPI Financial Aid Upperclass Application. In a few cases, some upperclass students will also be required to submit the CSS PROFILE Application in addition to these requirements. Typically, upperclass students who will need to complete the CSS PROFILE Application are those whose parents are recently separated or divorced, students who are re-admitted to WPI, students whose custodial and noncustodial parents have changed since the prior academic year, and students who did not apply for need based financial aid in the prior academic year. The WPI Office of Financial Aid reserves the right to request that a CSS PROFILE Application be completed by any upperclass student applying for need based financial aid.

The WPI Upperclass Financial Aid Application will be available at the end of Term B and is due by the beginning of Term D. Filing information on the FAFSA (and CSS PROFILE Application, if necessary) is due by April 15th. In addition, students and their parents are required to send to the WPI Office of Financial Aid a signed copy of their federal income tax forms (or a statement signed by the student/ parent indicating he/she will not file a return), schedules, and W-2 statements from the prior year if they are selected for verification*. The complete application provides consideration for grants, scholarships, loans and federal on-campus employment for the following academic year. Students and their parent(s) are expected to obtain and submit all requested forms in a timely manner for each year of planned enrollment. If any of the required forms are submitted late, there will be a delay in the student receiving an eligibility letter as well as a reduction in his/her grant or scholarship eligibility for the year in which he/she is applying for need based financial assistance. The amount of financial aid upperclass students receive will depend on their academic performance from the prior academic year, their family's demonstrated financial need which is determined from the FAFSA, the WPI Upperclass Financial Aid Application, and the CSS PROFILE Application, if required.

*Verification - please visit www.wpi.edu/Admin/FA/First/verificationfys.html for more information on the verification process.

TRANSFER STUDENTS

Transfer students may apply for financial aid eligibility beginning with their first term of matriculation and must indicate interest in financial aid on the admission application. Transfer aid applications will be reviewed based on the same documentation required for first year applicants and are packaged on a funds available basis. The FAFSA and CSS PROFILE (and Noncustodial PROFILE, if applicable) are due by March 1st.

FORMS OF AID

FEDERAL PELL GRANTS

Federal Pell Grants are awarded to high need students from low and lower middle-income families. These grants range from \$400 to \$5,550 per academic year. A Student Aid Report (SAR) is sent to all students who file a Free Application for Federal Student Aid (FAFSA). The WPI Financial Aid Office will verify the data on the form, making corrections if necessary. In 2010-11, WPI administered over \$2,286,000 in Federal Pell Grant funds to eligible full and part time students.

FEDERAL SUPPLEMENTAL EDUCATIONAL OPPORTUNITY GRANTS (FSEOG)

Federal SEOG funds are allocated to institutions by the Federal government. These funds, which are awarded to students as campus based grants, are awarded to high need students who are also eligible for the Federal Pell Grant. WPI students received over \$603,000 in Federal SEOG funds in the 2010-11 academic year.

FEDERAL DIRECT STAFFORD STUDENT LOAN

There are two types of Federal Direct Stafford Loans offered to students by the federal government: the Federal Direct Subsidized Stafford Loan and the Federal Direct Unsubsidized Stafford Loan. A student's federal financial need will determine which loan(s) he/she will be offered in the financial aid award.

Federal Direct Subsidized Stafford Loans are loans on which the federal government pays the interest while the student is enrolled in school at least half time and during periods of grace.

Students not eligible for the Federal Direct Subsidized Stafford Loan may borrow through the Federal Direct Unsubsidized Stafford Loan Program. In the Unsubsidized Stafford Loan Program, the federal government does not pay the interest on the loan. Rather, the student has the option to either pay the interest or capitalize it and postpone repayment of principal and interest until after graduation or falling below at least half time enrollment.

Repayment of both principal and interest for the Subsidized and Unsubsidized Federal Direct Stafford Loans begins at the end of the 6 month "grace period" following the last day of enrollment or withdrawal from school. Students have ten years to repay their Federal Direct Stafford Loans.

Students must file a FAFSA so that WPI can determine need-based eligibility for the Federal Direct Stafford Loan. The federal government sets annual borrowing limits according to the student's year in school or grade level. As of the 2010-11 academic year, first year students may borrow up to \$3,500, second year students up to \$4,500 and third and fourth year students up to \$5,500. Students cannot borrow in excess of \$23,000 over the life of their undergraduate education. All qualifying students may also borrow \$2,000 in the Unsubsidized Stafford Loan.

The WPI Office of Financial Aid recommends and approves the amount a student may borrow for the Subsidized and Unsubsidized Federal Direct Stafford Loan. For all new borrowers, a Master Promissory Note must be completed. This may be done electronically or on paper. Students will be notified of the availability of the note to be signed. The Master Promissory Note only needs to be signed once during the student's undergraduate time at WPI.

FEDERAL PERKINS LOAN

Federal Perkins Loans are federally subsidized loans awarded directly to students by colleges. Students are awarded based on available funds. Repayment of principal and interest, currently fixed at 5%, begins nine months after the recipient's last day of enrollment or withdrawal from college. For all new borrowers, a Master Promissory Note must be completed. The Master Promissory Note only needs to be signed once during the student's undergraduate time at WPI. In 2010-11 WPI administered over \$1.3 million in Federal Perkins Loans.

FEDERAL WORK STUDY PROGRAM

Federal Work Study (FWS) funds are allocated annually to colleges who offer federally funded work opportunities to high need financial aid applicants. FWS is included in the financial aid eligibility letter to students if they qualify for these funds. If a student accepts a FWS offer, he/she may work a maximum of 10 hours per week at the current wage of \$9.00 per hour.

Students who are awarded and accept the FWS funding are expected to complete 15 hours of community service during the academic year. In order to meet this requirement, students can obtain information on various community service opportunities from the WPI Student Activities Office (SAO). Approval of community service sites and hours of work must be granted by the WPI Office of Financial Aid or the Student Activities Office before students can begin work.

Students awarded FWS funding can choose to do one of the following:

1. Work on campus in an academic or administrative office during the academic year. During the year, the student also needs to work in a WPI SAO approved community service position for fifteen hours. The WPI SAO will work with students to find available opportunities to meet this requirement.
2. Work on or off campus in a WPI SAO approved community service position during the academic year. Students who work during the academic year in a community service position will meet their required 15 hours of community service in this position.

Obtaining a FWS position (and the required 15 hours of community service) either on or off campus is the responsibility of the student. Available FWS positions are posted at the beginning of each academic year on the WPI Human Resources Website: www.wpi.edu/Admin/HR. FWS earnings are paid by direct deposit on a bi-weekly basis to the student employee; they cannot be deducted from your tuition bill. Work is available in a variety of academic, administrative, or community service settings on and off campus. The off campus positions are community service positions and must be set up through SAO. Students who work in community service positions are paid \$10.00 per hour in order to cover travel expenses to and from their jobs. The amount of FWS funds offered in a student's award letter indicates maximum earnings allowed, but is not a guarantee. The best procedure is to take an available position at the start of the academic year and work as much as the schedule allows up to the maximum 10 hours per week. If a student declines an offer of work, it will not affect the other components of his/her award package. However, please note that due to limited funding, if a student declines FWS funding or employment, this fund will not be renewed in future academic years. In addition, if a student earns less than \$500 in FWS funds during

the academic year this fund is awarded or fails to complete the required 15 hours in community service, his/her FWS funding will not be renewed in future years. Please note that you can also lose your eligibility for FWS funds in future years if your financial need decreases or you do not meet the financial aid application deadline.

Students are prohibited from FWS employment if one of the following situations occurs: the student falls below the WPI established satisfactory academic progress levels for retention of aid, the student enrolls on a less than full time basis, or the student registers as a part-time/"Special Student."

STATE SCHOLARSHIP PROGRAMS

WPI administered over \$270,000 from the MASSGrant Program during the 2010-11 academic year. The MASSGrant is awarded to Massachusetts residents whose combined family contribution falls within state-determined parameters. Students must file the FAFSA by the state-designated deadline and follow all state program procedures to apply.

Massachusetts has reciprocity agreements with six other states: Connecticut, Maine, New Hampshire, Pennsylvania, Rhode Island and Vermont. These states allow their residents attending institutions in Massachusetts to "carry" need-based state grants into Massachusetts. Grants from all reciprocal states to WPI students in 2010-11 totaled over \$99,000. Awarding from other state scholarship programs depends on annual state funding levels.

The Massachusetts Gilbert Matching Grants Program is allocated annually to WPI. These funds are awarded to Massachusetts residents who fall within a certain financial need. WPI students received over \$545,000 in the Massachusetts Gilbert Matching Grant during 2010-11.

STATE FUNDED STUDENT LOAN PROGRAMS

The Commonwealth of Massachusetts provides the Massachusetts No Interest Loan (MA NIL) Program through annual allocations to participating colleges and universities. Students who file the FAFSA and meet state eligibility criteria are eligible for the Massachusetts No Interest Loan on a funds available basis. WPI administered \$602,000 in the MA NIL program in 2010-11.

WPI COLLEGE SCHOLARSHIP

WPI awards College Scholarships and other restricted or endowed "gift" assistance, to students who have a demonstrated financial need based on review of the completed financial aid application, including the FAFSA, the CSS PROFILE Application (if first year applicant), IRS tax returns, W-2 forms (if selected for verification), and the WPI Upperclass Financial Aid Application (if returning undergraduate). WPI gift aid may be combined with federal and state grants to make up a student's total portion of "gift" assistance, before loans and work are packaged. Grants and scholarships funded directly by WPI exceeded \$53 million in 2010-11.

WPI INSTITUTE STUDENT LOAN PROGRAM

The WPI Institute Loan is an institutional need-based loan awarded to students. Repayment of the principal and interest begins 9 months after the last day of enrollment or withdrawal from college. WPI students borrowed \$2.4 million in Institute Loans during 2010-11. The Institute Loan terms and eligibility criteria are similar to the Federal Perkins Loan Program.

FEDERAL DIRECT PLUS LOANS

Federal Direct PLUS Loans are available annually to parents of dependent undergraduate students. Repayment begins when the funds are advanced to the school with the option to defer repayment until after the student graduates or falls below half time enrollment status. Parents have 10 years to repay the Federal Direct PLUS Loan.

Graduate Students who need funding beyond the Federal Direct Subsidized* and Unsubsidized Stafford Loans may borrow the additional funds under the Graduate Direct PLUS Loan Program. While the program is very similar to the Parent PLUS Loan program outlined above, there are some differences. Graduate students borrowing under the Graduate Direct PLUS Loan are required to complete a FAFSA and must apply for the Subsidized Stafford Loan before applying for the PLUS Loan. Principal and interest are deferred until the student completes his/her degree, withdraws, or fall below half-time enrollment. Interest will accrue during the deferment period.

**Due to the Budget Control Act of 2011, the Federal Direct Subsidized Stafford Loan program will no longer be available to graduate students as of July 1, 2012. Graduate students will still be able to borrow loan funds from the Federal Direct Unsubsidized Stafford Loan program.*

WPI DEPARTMENT-FUNDED WORK PROGRAM

Students who are not eligible for Federal Work Study funds may seek employment opportunities through departments or offices on campus that set aside funds for hiring undergraduate employees. These employment funds vary from year to year in terms of monies available or the number of students allowed per department/office. Students may also inquire about department-funded summer positions on campus.

FINANCIAL AID POLICIES

Financial aid is awarded one year at a time. Aid applicants are required to reapply annually by the beginning of Term D. An annual review of each applicant's financial need is assessed to assure that aid is renewed equitably as different circumstances cause needs to change. The WPI Office of Financial Aid determines a student's financial need through a review of the completed financial aid application. Financial aid eligibility letters are mailed to upperclass students in early July for the following academic year.

STUDENT CONTRIBUTION

It is expected that the student's family will contribute its maximum financial effort and that the student will also make a maximum effort through savings from annual earnings and by accepting a proportion of financial aid in the form of loans and/or in-school employment, if eligible. Students at WPI are expected to contribute a minimum \$2,100 each academic year from summer or other annual earnings. While this minimum student contribution is used, the WPI Office of Financial Aid must review previous calendar year student earnings and student savings/assets as the basis for determining the annual student contribution.

INDEPENDENT/DEPENDENT STUDENT STATUS

WPI believes that the primary responsibility for an undergraduate education lies with the student and parent, to whatever extent possible. Therefore, all undergraduates applying for WPI institutional funds are required to provide parental information regardless of federal dependency status.

Although a student may meet federal guidelines to be considered an independent student, and therefore receive federal funds as an independent student, the ability of parents to assist their children, regardless of age and dependency status, is a factor WPI considers in determining eligibility for institutional need-based grants. Because of this, the WPI Office of Financial Aid will require parental information from all students applying for need based institutional aid.

AID RETENTION / PROGRESS TOWARD A DEGREE

There are four key elements to the retention of eligibility for financial aid as it relates to academics:

1. All full time students are expected to register and enroll in twelve 1/3 unit classes per academic year. The more classes a student successfully completes (up to a maximum of 12 courses during terms A-D), the more the student's grant/scholarship eligibility is maintained for the next academic year.

Attempting but not successfully completing courses and project work will reduce financial aid. Please note that advanced placement, transfer credit, incompletes, or extensions cannot be counted in the determination of units completed. The student is responsible for resolution of incompletes with the faculty member assigning the grade.

WPI Financial Need Scholarships/Grants

WPI scholarships and grants awarded to students will not increase in future academic years; regardless of changes in a student's financial need. Conversely, students' WPI need based scholarships and grants can decrease based on a lower financial need and/or poor academic performance (from the prior academic year).

WPI Merit Scholarships

WPI merit scholarships will not increase or decrease based on changes to a student's financial need. However, a student's merit scholarship will decrease or be eliminated if a student does not meet the renewal criteria to maintain these scholarships. Please refer to your Admissions Merit Scholarship letter for detailed information on renewal criteria for merit scholarships.

2. Eligibility for consideration for all types of financial aid for the following academic year is lost if a student is placed on Academic Probation (end of B or D term).

Financial Aid Petitions:

Students placed on Academic Probation may, in cases which involve unusual and extenuating circumstances such as documented medical problems, file a financial aid petition with the WPI Office of Financial Aid. Financial Aid Petitions can be obtained in the WPI Office of Financial Aid (2nd floor Bartlett Center) or online at www.wpi.edu/Admin/FA/Returning/forms.html. The petition will be reviewed by the Financial Aid Appeal Committee. Determination on financial aid petitions will be made on a case by case basis.

3. Regardless of academic progress status, eligibility for financial assistance (with the exception of the Federal Stafford Loan) is available for the shorter of the two following periods; 16 terms (4 years) of enrollment at WPI (NOT 16 terms of receiving financial aid), or completion of your Bachelor Degree requirements at WPI.
4. If students receive scholarships/grants, loans of all forms and/or federal work study, they must be registered as a full-time. Students are charged tuition and fees based upon full-time status and that serves as the basis for annual financial aid eligibility determinations.

Students are responsible for knowing their enrollment and academic status and working with an academic advisor to register and enroll for the necessary units to maintain eligibility for financial aid.

PLEASE NOTE: With the exception of the Federal Direct Stafford Loan program, financial aid is not available for enrollment during term E (Summer School) at WPI. This includes all forms of assistance including WPI Merit Scholarships. If you enroll during term E and borrow a Federal Direct Stafford Loan, the amount you borrow will be reduced from your Federal Direct Stafford Loan eligibility for the next academic year (terms A-D).

GRADUATE

The Federal Stafford Loan is the only source of need based aid administered by the WPI Office of Financial Aid to graduate students. To apply for this loan, graduate students must complete the FAFSA (www.fafsa.gov) and a Graduate Student Application which can be obtained at <http://www.wpi.edu/Admin/FA/Grad/gsa.html>.

Due to the Budget Control Act of 2011, the Federal Direct Subsidized Stafford Loan program will no longer be available to graduate students as of July 1, 2012. Graduate students will still be able to borrow loan funds from the Federal Direct Unsubsidized Stafford Loan Program.

INTERNATIONAL STUDENTS

International students (who do not have official documentation of Permanent Residence Status in the United States) are ineligible for all sources of financial aid administered by the WPI Office of Financial Aid. Limited scholarships are available for entering international students through the WPI Admissions Office.

ALTERNATIVE FINANCIAL PROGRAMS

Alternate financing programs are available to many students and their families who do not apply for aid or who need additional resources beyond federal, state, and institutional financial aid offered. WPI offers the TMS (Tuition Management Systems) payment plan which allows parents to pay their annual charges over 12 months rather than in two semester payments. Students and parents are encouraged to contact the WPI Bursar's Office for further information on the TMS payment plan option.

There are many long-term financing programs available to assist students and their families in spreading their educational costs over 10 to 20 years. Many of these loans allow students and their families to borrow the difference between the cost of attendance determined by the college and total financial aid

received for the academic year. Please contact the WPI Office of Financial Aid or visit <http://www.wpi.edu/Admin/FA/First/fylinks.html> for additional information on available financing options.

FEDERAL PLUS LOANS

Federal PLUS Loans are available annually to parents of dependent undergraduate students. Repayment begins when the funds are advanced to the school with the option to defer repayment until after the student graduates or falls below half time enrollment status. Parents have 10 years to repay the Federal PLUS Loan.

Graduate Students who need funding beyond the Federal Subsidized and Unsubsidized Stafford Loans may borrow the additional funds under the Graduate PLUS Loan Program. While the program is very similar to the Parent PLUS Loan program outlined above, there are some differences. Graduate students borrowing under the Graduate PLUS Loan are required to complete a FAFSA and must apply for the Subsidized

Stafford Loan before applying for the PLUS Loan. Principal and interest are deferred until the student completes his/her degree, withdraws, or fall below half-time enrollment. Interest will accrue during the deferment period.

RESERVE OFFICER TRAINING CORPS (ROTC) SCHOLARSHIPS

ARMY ROTC SCHOLARSHIP PROGRAM

For information on Army ROTC Scholarships, please contact the Army ROTC office at WPI at (508) 831-5268.

NAVAL ROTC SCHOLARSHIP PROGRAM

For information on Navy ROTC Scholarships, please contact the Naval ROTC Unit at Holy Cross College in Worcester, MA at (508) 832-2433.

AIR FORCE ROTC SCHOLARSHIP PROGRAM

For information on Air Force ROTC Scholarships, please contact the WPI Department of Aerospace Studies at WPI at (508) 831-5747.

RESIDENCE HALLS

WPI provides its undergraduate students with a variety of housing options, both on and off campus. The WPI residence halls offer students a choice of single, double, and triple occupancy rooms as well as suites designed for four and six persons, and two- to seven- person apartments. In addition, WPI owns and staffs four houses located just a short walk from the campus. Off-campus housing alternatives include rooms in homes, apartments, fraternity/sorority living, and commuting from home.

Residence hall living at WPI offers opportunities that can be a valuable part of higher education. For this reason, on-campus housing is guaranteed to all first-year students who request it by June 1 as stated in their admission letter. First-year students admitted for Term A are guaranteed housing in the residence halls for that entire academic year.

Upperclass students may apply for those residence hall spaces not reserved for incoming first-year students. The Housing and Food Service Contract is a legally binding contract which extends from the beginning of Term A through Term D as long as the student is enrolled at WPI.

RESIDENCE HALL STAFF

Resident Advisors (RAs) are the core of the residential life staff in the residence halls. RAs serve as a source of assistance in resolving students' academic, personal, and social concerns. They plan and implement social and educational programs in the halls, and enforce all WPI policies and regulations in an effort to develop an effective living-learning environment in the residence halls.

The administrative responsibility for the operation of the residence halls rests with the professional staff in Residential Services. They counsel and advise students, work with maintenance and dining hall staffs, and handle many administrative processes for students living on campus.

OCCUPANCY

Residence halls normally open at 9:00 a.m. four days before Term A begins and close at 12:00 noon on the day following the last day of classes for Term D. Housing and food service privileges are not transferable, nor may any person take up de facto residence without paying rent. The residence halls will be closed during the December recess period.

FURNISHINGS AND FACILITIES

Students are responsible for the neatness and cleanliness of their rooms. Residence halls are furnished with a twin-size bed, a desk and chair, closet space, and drawer space for each student. All residence halls are smoke free environments and all buildings have complete sprinkler systems in all student bedrooms and common areas. Data network services, telephone, and cable television are included in room rates. Residents provide their own pillows, linens, blankets, and other personal furnishings. ID Cards and Coin-operated laundry facilities are available at four locations on the campus.

The following are not permitted in the residence halls:

- Sale, use or possession of illegal drugs
- Pets, except small fish
- Refrigerators larger than 4.3 cubic feet in size
- Gambling
- Use of alcoholic beverages in violation of Massachusetts State Laws
- Firearms, weapons, explosives, incendiary or toxic chemicals, starting pistols, paint ball guns
- Cooking, except in kitchen areas provided
- Candles or other flame-emitting devices
- Smoking

Mail and express packages should be addressed to the student by name, and box number, WPI, 100 Institute Road, Worcester, MA 01609-2280.

ROOMMATES

One of the most memorable aspects of campus life can be the relationship you will build with your roommate(s). Roommates often find that a meaningful relationship is developed through the sharing of thoughts and feelings; in other words, communication. We encourage you to be as open as possible so that you and your roommate can begin early to create a relationship based on respect and understanding. This relationship can help make residence hall living one of the most enjoyable part of your college career.

ROOM CHARGES

Since room and board rates for 2013-2014 were not established at the time of this publication, they will be announced separately.

Room Rates for 2012-13

(Note: Room rates listed are for the entire academic year)

Standard Double, Triple, Quad	\$7,220
Standard Single	\$7,642

Founders

Double, Triple, Quad	\$7,220
Standard Single	\$7,642

Ellsworth/Fuller

2 person	\$7,716
3 person	\$7,320
5 person	\$6,956
7 person	\$6,304

East Hall

Studio	\$8,554
Single	\$8,438
Double	\$8,084

Note: Each apartment is equipped with basic furnishings including stove and refrigerator.

Payment for housing and food service fees are made in two installments, one each at the beginning of Terms A and C. Reduced charges, if applicable, will be processed according to the established withdrawal policy of the college. Students entering the residence halls other than at the beginning of Term A or C will be issued a prorated billing for the period. This bill must be paid in full prior to occupancy.

As part of the room charges for the first term of residency, the student is assessed a \$150 damage deposit. Students are expected to care for the physical facilities of the residence halls. Damage to the facilities beyond the normal wear and tear shall be the financial responsibility of the residents. The security deposit, less any outstanding charges, will be credited to the students account and appear as a credit on their next bill.

First-year students can expect to receive a Housing and Food Service Contract in early May, after their \$500 tuition deposit is received by the Office of Admissions. On this contract, they will indicate their room preference for the residence halls.

All students wishing to live in the residence halls must submit a signed WPI Housing and Food Service Contract.

MEALS

All residence hall students (with the exception of Fuller/Ellsworth apartment residents) are required to participate in one of the four meal plans. The MEALS PLUS PLANS are a combination of traditional meal plans plus additional funds to be utilized at the students discretion.

Once a student has contracted for food service, this is a legally-binding agreement, and students are obligated to assume financial responsibility for the entire academic year.

Board Plan Rates for the 2012-13 academic year

(Note: Students are required to be on a meal plan for the entire academic year)

	Yearly Cost
19 meals plus \$75	
in Bonus Points	\$5,430
14 meals plus \$175	
in Bonus Points	\$5,430
“The 200”, plus \$100	
in Bonus Points	\$5,430
“The VIP”, plus \$100	
in Bonus Points	\$6,332

Descriptions of the board plans are available in the enclosed Dining Services brochure and at the web address: <http://www.wpi.edu/Admin/Dining/>

OFF-CAMPUS LIVING

After the first year, on-campus housing is not guaranteed, so if you decide to look for an off-campus apartment, make plans well in advance. Residential Services, located in East Hall, can be a valuable resource for you as you begin your search for off-campus housing. Residential Services maintains a listing of available housing in the Worcester area, as well as an on-line apartment finder system which can be accessed through the department's web page. In addition, information is available for you to research questions about small claims court, housing codes, leases, tenants rights, etc. The following are a few hints for you as you begin your search for off-campus housing.

Leases: Contract periods for off-campus housing vary in length, from twelve-month and nine-month to summer only and three-month leases. As you consider various places, find out what types of leases are available.

Looking: Check bulletin boards around campus for apartment ads. Also watch Tech News classifieds. In addition, the Residential Services Office maintains a listing of available off-campus housing.

Be Prepared: You'll want to plan realistically for expenses such as utilities, transportation, repairs, laundry, and food. Also, try to pick your roommates carefully and ahead of time.

LODGING LAWS

You should also be aware that the City of Worcester has a law that prohibits more than four unrelated persons living together unless the landlord or owner has obtained a lodging house license.

TRUSTEES

The administration of the college is entrusted to a Corporation consisting of not less than 12 members, consisting of life, ex-officio, at-large and alumni members. Emeriti members are elected by the Corporation in an advisory capacity. (Dates in parentheses following each name indicate year of election to membership.)

OFFICERS OF THE CORPORATION

STEPHEN E. RUBIN '74
Chairman

WARNER S. FLETCHER
Vice Chairman

FRANCESCA MALTESE
Vice Chairman

DENNIS D. BERKEY
President and CEO

JEFFREY S. SOLOMON
Treasurer

STEPHANIE PASHA
Secretary

A. TRACY HASSETT
Assistant Secretary

CURRENT MEMBERS

JENNIFER DAVIS CAREY (2008)
Executive Director
Worcester Educational Collaborative

CURTIS R. CARLSON '67 (2002)
President and CEO
SRI International
Menlo Park, CA

RICHARD F. CONNOLLY, JR. (2005)
Senior Vice President, Financial Advisor
Morgan Stanley
Boston, MA

MICHAEL DOLAN '75 (2006)
Senior Vice President
Exxon Mobil Co.
Irving, TX

DANIEL F. FARRAR '84 (2007)
CEO
Switchfly
San Francisco, CA

HENRY FITZGERALD '75 (2012)
Principal
First Step Program Management
Shrewsbury, MA

ADMINISTRATION

Numerals following name indicate year(s) of initial appointment.

DENNIS D. BERKEY (2004)
University President
B.A., Muskingum College, 1969;
M.A., Miami University of Ohio, 1971;
Ph.D., University of Cincinnati, 1974.

STEPHEN P. FLAVIN (2005)
Vice President, Academic and Corporate Development
B.S., Suffolk University, 1990; J.D., 1994.

A. TRACY HASSETT, SPHR (1998)
*Vice President for Human Resources,
Assistant Secretary of the Corporation*
B.S. Roger Williams University, 2002.

WILLIAM J. MCAVOY (2011)
Vice President for University Advancement
B.S. University of Connecticut (1978)
M.P.A., Suffolk University (1987)

ERIC W. OVERSTRÖM (2004)
Provost
Professor, Biology and Biotechnology
B. A., SUNY Oswego, 1974;
M.S., University of Massachusetts (Amherst), 1978;
Ph.D., 1981.

STEPHANIE PASHA (2004)
Assistant Vice President for Administration
B.S.B.A., Boston University, 1993; Ed.M., 1997.

JEFFREY S. SOLOMON (2005)
Executive Vice President/CFO
Treasurer of the Corporation
B.S., Bentley College, 1985;
M.S., Brandeis University, 2001.

KRISTIN R. TICHENOR (2000)
Senior Vice President for Enrollment and Institutional Strategy
B.A., Carleton College, 1985;
M.A., Clark University, 1994.

PHILIP N. CLAY (1993)
Chief Student Affairs Officer
Dean of Students
B.A., St. Lawrence University (1982)
M.A., Binghamton University (1986)

EDWARD J. CONNOR (2001)
Chief Admissions Officer
Dean of Admissions
B.S., Worcester Polytechnic Institute (1992)
M.S., Boston College (2000)

DEBORAH C. SCOTT (2010)
Chief Information Officer
B.S., California State University (1983)
M.B.A., UCLA Anderson School of Management (2007)

AMY M. MORTON (2010)
Chief Marketing Officer
B.A., Providence College (1990)

ACADEMIC AFFAIRS

ERIC W. OVERSTRÖM (2004)
Provost and Senior Vice President
Professor, Biology and Biotechnology
B. A., SUNY Oswego, 1974;
M.S., University of Massachusetts (Amherst), 1978;
Ph.D., 1981.

SELCUK I. GUCERI (2011)
Bernard M & Sophia Gordon Dean in Engineering and
Professor of Engineering Leadership
Professor, Mechanical Engineering
B.S., M.S., Middle East Technical University, 1960;
Ph.D., North Carolina State University, 1976.

ARTHUR C. HEINRICHER, JR. (1992)
Dean of Undergraduate Studies; Professor, Mathematical Sciences
B.S., University of Missouri/St. Louis, 1980;
Ph.D., Carnegie Mellon University, 1986.

KAREN KASHMANIAN OATES (2010)
Peterson Family Professorship in Life Sciences and Biology;
Professor of Biology and Biotechnology
B.S., Rochester Institute of Technology, 1973;
Ph.D., The George Washington University, 1985.

MARK P. RICE (2010)
Dean of Business; Professor, School of Business
B.S., Rensselaer Polytechnic Institute, 1971;
M.S., 1979; Ph.D., 1992.

RICHARD D. SISSON, JR. (1976)
Dean of Graduate Studies; George F. Fuller Professorship in Mechanical Engineering (2004-2007) (2007-2010) (2010-2013)
Director of Manufacturing and Materials Engineering; Professor, Mechanical Engineering;
 B.S., Virginia Polytechnic Institute, 1969;
 M.S., Purdue University, 1971; Ph.D., 1975.

RICHARD F. VAZ (1983)
Dean, Interdisciplinary and Global Studies Division
Associate Professor, Electrical and Computer Engineering;
 B.S.E.E., Worcester Polytechnic Institute, 1979;
 M.S.E.E., 1984; Ph.D., 1987.

KRISTIN K. WOBBE (1995)
Associate Dean of Undergraduate Studies;
Associate Professor, Chemistry and Biochemistry
 B.A., St. Olaf College, 1983;
 Ph.D., Harvard University, 1991.

ACADEMIC DEPARTMENT HEADS

LT COL MICHAEL DEROSA
Air Force Aerospace Studies

JOSEPH B. DUFFY
Biology and Biotechnology

KI H. CHON
Biomedical Engineering

DAVID DIBIASIO
Chemical Engineering

ARNE GERICKE
Chemistry and Biochemistry

TAHAR EL-KORCHI
Civil and Environmental Engineering

CRAIG E. WILLS
Computer Science

YEHIA MASSOUD

JAMES K. DOYLE
Social Science and Policy Studies

FACULTY

(As of January 2013)

Numerals following name indicate year(s) of initial appointment.

Generally, in this listing, faculty with the titles "associate professor" or "professor" are tenured, and with the title "assistant professor" are on the tenure track. Faculty with titles other than these three are full-time but not tenured or tenure track.

JONATHAN P. ABRAHAM (2004)
Professor of Practice, Mathematical Sciences
 B.S. University of Iowa 1980;
 F.S.A., Society of Actuaries 1991.

DAVID S. ADAMS (1984)
Professor, Biology and Biotechnology
 B.S., Oklahoma State University, 1974;
 M.S., University of Houston, 1976;
 Ph.D., University of Texas, 1979.

WILLIAM A. B. ADDISON, JR. (1986)
Associate Professor of History, Humanities and Arts
 B.A., University of South Carolina, 1965;
 M.A., University of Virginia, 1967;
 M.Phil., Columbia University, 1974; Ph.D., 1986.

EMMANUEL O. AGU (2002)
Associate Professor, Computer Science
 B.Eng., University of Benin, Nigeria, 1994;
 M.S., University of Massachusetts/Amherst, 1996; Ph.D., 2001.

LEONARD D. ALBANO (1992)
Associate Professor, Civil and Environmental Engineering
Associate Professor, Fire Protection Engineering
 B.S., Tufts University, 1982;
 M.S., Northwestern University, 1983;
 Ph.D., Massachusetts Institute of Technology, 1992, P.E.

DIRK ALBRECHT (2013)
Assistant Professor, Biomedical Engineering
 B.S., University of California-San Diego, 1997;
 M.S., 2001; Ph.D., 2005.

DIRAN APELIAN (1990)
Professor, Mechanical Engineering;
Howmet Professor of Engineering;
Director, Metal Processing Institute
 B.S., Drexel University, 1968;
 Sc.D., Massachusetts Institute of Technology, 1972.

PADMANABHAN K. ARAVIND (1984)
Professor, Physics, and Associate Head of Department
 B.S., Delhi University (India), 1971; M.S., 1973;
 Ph.D., Northwestern University, 1980.

JOSÉ M. ARGÜELLO (1996)
Professor, Chemistry and Biochemistry
Walter and Mariam B. Rutman Distinguished
Professorship in Chemistry
 B.S., National University of Cordoba, 1979;
 Ph.D., National University of Rio Cuarto, Argentina, 1986.

IVON ARROYO
Assistant Teaching Professor, Social Science and Policy Studies
 EED, University of Massachusetts, 2003.

- HOLLY K. AULT (1983)
Associate Professor, Mechanical Engineering
B.S., Worcester Polytechnic Institute, 1974; M.S., 1983;
Ph.D., 1988.
- WILLIAM A. BALLER (1986)
Assistant Teaching Professor of History, Humanities and Arts
B.A., Marquette University, 1971;
M.A., Providence College, 1975;
M.S., Columbia University, 1976;
M.A., State University of New York at Albany, 1982;
Ph.D., Clark University, 1994.
- SCOTT BARTON (2012)
Assistant Professor, Humanities and Arts
B.A., Colgate University, 1998;
M.M., Brooklyn College Conservatory of Music, 2006;
Ph.D., University of Virginia, 2012.
- ISA BAR-ON (1982)
Professor, Mechanical Engineering
B.S., Hebrew University of Jerusalem, 1974;
M.S., 1977; Ph.D., 1984.
- ILT SAM BATH (2011)
Assistant Professor, Military Science
B.A., Stonehill College, 2007.
- JOSEPH E. BECK (2008)
Assistant Professor, Computer Science;
Assistant Professor, Social Science and Policy Studies
B.S., Mathematics, Carnegie Mellon University, 1993;
Ph.D., University of Massachusetts, Amherst, 2001.
- UMBERTO BERARDI (2012)
Assistant Teaching Professor, Civil Engineering
Ph.D., Polytechnic University of Bari, Italy, 2011.
- MIHHAIL BEREZOVSKI (2011)
Post-Doc Scholar
B.S., Tallinn University of Technology, Estonia, 2003;
M.S., 2006; Ph.D., 2010.
- DMITRY BERENSON (2012)
Assistant Professor, Computer Science/Robotics Engineering
B.S., Cornell University, 2005;
M.S., Carnegie Mellon University, 2009; Ph.D., 2011.
- JOHN A. BERGENDAHL (2000)
Associate Professor, Civil and Environmental Engineering
Associate Professor, Chemical Engineering
B.S., University of Connecticut, 1985; M.S., 1996;
Ph.D., 1998.
- FREDERICK BIANCHI (1994)
Professor of Music; Humanities and Arts
B.A., Cleveland State University, 1980;
M.S., Ball State University, 1982; Ph.D., 1985.
- KRISTEN L. BILLIAR (2002)
Associate Professor, Biomedical Engineering
Associate Professor, Mechanical Engineering
B.S., Cornell University, 1991;
M.S., University of Pennsylvania, 1992; Ph.D., 1998.
- STEPHEN J. BITAR (1994)
Instructor, Electrical and Computer Engineering
B.S., Worcester Polytechnic Institute, 1985; M.S., 1995.
- MARCEL Y. BLAIS (2005)
Assistant Teaching Professor, Mathematical Sciences
B.S., Fairfield University, 1999;
Special Masters, Cornell University, 2003.
- JOHN J. BLANDINO (2001)
Associate Professor, Mechanical Engineering
B.S., Rensselaer Polytechnic Institute, 1987;
M.S., Massachusetts Institute of Technology, 1989;
Ph.D., California Institute of Technology, 2001.
- YEVGENIY BOGDANOV (2002)
Assistant Teaching Professor, Electrical and Computer Engineering
B.S., Worcester Polytechnic Institute, 1997; M.S., 1998;
Ph.D., 2002.
- ESTHER BOUCHER-YIP (2012)
Assistant Teaching Professor, Humanities and Arts
EED, University of Leicester, United Kingdom, 2005.
- KRISTIN BOUDREAU (2009)
Professor of English, Humanities and Arts,
and Head of Department
B.A., Cornell University, 1987;
M.A., University of Rochester, 1989; Ph.D., 1992.
- JOEL J. BRATTIN (1990)
Professor of English, Humanities and Arts
A.B., University of Michigan, 1978;
Ph.D., Stanford University, 1985.
- ULRIKE BRISSON (2006)
Assistant Teaching Professor of German, Humanities and Arts
B.S., University of Hannover-Germany;
M.A., The Pennsylvania State University, 1995; Ph.D., 2000.
- DREW R. BRODEUR (2010)
Assistant Teaching Professor, Chemistry and Biochemistry
B.S., University of Rhode Island (URI), 2006;
B.A., 2006; Ph.D., 2010.
- CHRISTOPHER A. BROWN (1989)
Professor, Mechanical Engineering;
Professor, Biomedical Engineering
B.A., University of Vermont, 1975;
M.S., 1979; Ph.D., 1983.
- DAVID C. BROWN (1980)
Professor, Computer Science; Professor, Mechanical Engineering
B.S., North Staffordshire Polytechnic, 1970;
M.S., University of Kent at Canterbury, 1974;
M.S., Ohio State University, Columbus, 1976; Ph.D., 1984.
- DONALD R. BROWN (2000)
Associate Professor, Electrical and Computer Engineering
B.S., University of Connecticut, 1992; M.S., 1996;
Ph.D., Cornell University, 2000.
- MICHAEL A. BUCKHOLT (2001)
Assistant Teaching Professor, Biology and Biotechnology
B.S., The Pennsylvania State University, 1987;
Ph.D., Worcester Polytechnic Institute, 1992.
- STEVEN C. BULLOCK (1989)
Professor of History, Humanities and Arts
B.A., Houghton College, 1978;
M.A., SUNY-Binghamton, 1980;
A.M., Brown University, 1982; Ph.D., 1986.

- SHAWN C. BURDETTE (2011)
Associate Professor, Chemistry and Biochemistry
B.S., Case Western Reserve University, 1997;
Ph.D., Massachusetts Institute of Technology, 2002.
- NANCY A. BURNHAM (2000)
Associate Professor, Physics;
Associate Professor Biomedical Engineering
B.A., Colgate University, 1980;
M.S., University of Colorado, Boulder, 1985; Ph.D., 1987.
- CAPT VITO A. BUSSMANN (2012)
Asst. Professor, Air Force Aerospace Studies, and
Recruiting Flight Commander
B.S., Illinois Institute of Technology, 2007.
- TERRI ANNE CAMESANO (2000)
Associate Professor, Chemical Engineering
Associate Professor, Civil and Environmental Engineering
B.S., University of Rochester, 1995;
M.S., University of Arizona, 1997;
Ph.D., Pennsylvania State University, 2000.
- FABIO CARRERA (1991)
Associate Teaching Professor
B.S., Worcester Polytechnic Institute, 1984; M.S., 1996;
Ph.D., Massachusetts Institute of Technology, 2004.
- LEFFIE CEWE-MALLOY (2001)
Instructor
M. S., SUNY Cortland, New York, 1986.
- SONIA CHERNOVA (2010)
Assistant Professor of Computer Science and Robotics Engineering,
Computer Science
B. S., Carnegie Mellon University, 2003; Ph.D., 2010.
- KI H. CHON (2010)
Professor, Biomedical Engineering, and Head of Department
Professor, Electrical and Computer Engineering
B.S., University of Connecticut, 1985;
M.S., University of Iowa, 1989;
M.S., University of Southern California, 1991; Ph.D., 1993.
- JO WOON CHONG (2012)
Research Assistant Professor
Ph.D., Korea Advanced Institute of Science and
Technology, 2009.
- MARIA CHERICETTI (2012)
Assistant Professor, Mechanical Engineering
B.S., Politecnico di Milano, 2004; M.S., 2007;
M.S., Georgia Institute of Technology, 2011; Ph.D., 2012.
- PETER R. CHRISTOPHER (1963)
Professor, Mathematical Sciences
A.B., Clark University, 1959; M.A., 1963; Ph.D., 1982.
- MICHAEL J. CIARALDI (1999)
Professor of Practice, Computer Science
B.A., Cornell University, 1973;
M.S., Rochester Institute of Technology, 1979;
M.S., University of Rochester, 1983.
- EDWARD A. CLANCY (2000)
Associate Professor, Electrical and Computer Engineering;
Associate Professor, Biomedical Engineering
B.S., Worcester Polytechnic Institute, 1983;
M.S., Massachusetts Institute of Technology, 1987; Ph.D., 1991.
- CONSTANCE A. CLARK (2006)
Associate Professor, Humanities and Arts
B.S., State University of New York/Stony Brook, 1978;
M.A., University of Colorado/Boulder, 1996; Ph.D., 2002.
- WILLIAM M. CLARK (1986)
Associate Professor, Chemical Engineering
B.S., Clemson University, 1979;
Ph.D., Rice University, 1984.
- MARK L. CLAYPOOL (1998)
Professor, Computer Science;
Director, Interactive Media and Game Development
B.A., Colorado College, 1990;
M.S., University of Minnesota, 1993; Ph.D., 1996.
- EBEN C. COBB (1995)
Visiting Assistant Professor, Mechanical Engineering
B.S., Norwich University, 1977;
M.S., University of Wisconsin, 1978;
M.S., Boston University, 1981;
Ph.D., University of Connecticut, 1985.
- JAMES M. COCOLA (2009)
Assistant Professor of Literature, Film, and Media,
Humanities and Arts
A.B., Harvard College, 1998;
Ph.D., University of Virginia, 2009.
- ROBERT E. CONNORS (1976)
Professor, Chemistry and Biochemistry,
and Associate Head of Department
B.S., University of Massachusetts, 1967;
Ph.D., Northeastern University, 1972.
- DAVID CYGANSKI (1976)
Professor, Electrical and Computer Engineering
B.S., Worcester Polytechnic Institute, 1975;
M.S., 1976; Ph.D., 1981.
- RAVINDRA DATTA (1998)
Professor, Chemical Engineering
B.T., Indian Institute of Technology (India), 1972;
Ph.D., University of California, Santa Barbara, 1981.
- PAUL W. DAVIS (1970)
Professor, Mathematical Sciences
B.S., Rensselaer Polytechnic Institute, 1966;
M.S., 1967; Ph.D., 1970.
- COREY DEHNER (2012)
Assistant Teaching Professor, IGSD
Ph.D., Northeastern University, 2009.
- JOHN F. DELOREY (2001)
Instructor of Music/Director of Choral Music, Humanities and Arts
B.A., Vassar College, 1981;
M.M., The Boston Conservatory, 2003.
- NICHOLAS A. DEMBSEY (1995)
Professor, Fire Protection Engineering; Professor, Mechanical
Engineering; Professor, Civil and Environmental Engineering
B.S., University of Michigan, Ann Arbor, 1986
M.S., University of California at Berkeley, 1988; Ph.D., 1995.
- MICHAEL A. DEMETRIOU (1997)
Professor, Mechanical Engineering
B.S., University of Southern California, 1987; M.S., 1989;
M.S., 1990; Ph.D., 1993.

- CHRYSANTHE DEMETRY (1993)
Associate Professor, Mechanical Engineering;
Director, Morgan Teaching and Learning Center
B.S., Worcester Polytechnic Institute, 1988;
Ph.D., Massachusetts Institute of Technology, 1993.
- JAMES DEMPSEY (2004)
Instructor, Humanities and Arts
B.A., University of Liverpool (U.K.), 1976;
M.A., Clark University, 1978.
- ROBERT E. DEMPSKI (2009)
Assistant Professor, Chemistry and Biochemistry
B.S., Bucknell University, 1997;
Ph.D., Massachusetts Institute of Technology, 2003.
- LT COL MICHAEL L. DEROSA (2013)
Professor, Air Force Aerospace Studies, and Head of Department
B.S., United States Air Force Academy, 1995;
M.B.A., Embry Riddle Aeronautical University, 1997;
M.S., National Intelligence University, 2005.
- N. AARON DESKINS (2009)
Assistant Professor, Chemical Engineering
B.S., University of Utah, 2001;
Ph.D., Purdue University, 2006.
- JENNIFER DEWINTER (2009)
Assistant Professor of Writing/Rhetoric, Humanities and Arts
B.A., Eastern Washington University, 2000; M.A., 2002;
Ph.D., University of Arizona, 2008.
- DAVID DIBIASIO (1980)
Associate Professor, Chemical Engineering,
and Head of Department
B.S., Purdue University, 1972; M.S., 1977; Ph.D., 1980.
- FRANK A. DICK (2007)
Assistant Teaching Professor, Physics
B.S., University of Texas/San Antonio, 1984;
M. S., Worcester Polytechnic Institute, 2005; Ph.D., 2007.
- MIKHAIL F. DIMENTBERG (1994)
Professor, Mechanical Engineering
M.S.C., Moscow Institute of Power Engineering, 1958;
Ph.D., 1963; Doctor of Technical Sciences, 1971.
- JAMES P. DITTAMI (1985)
Professor, Chemistry and Biochemistry
B.A., College of The Holy Cross, 1975;
M.S., Boston College, 1978;
Ph.D., Rensselaer Polytechnic Institute, 1983.
- ANTHONY G. DIXON (1980)
Professor, Chemical Engineering
B.S., Edinburgh University, 1975; Ph.D., 1978.
- SOUSSAN DJAMASBI (2004)
Associate Professor, School of Business
B.S., Christian Albert University (Germany), 1988;
M.S., University of New Mexico, Albuquerque, 1991;
Ph.D., University of Hawaii, Manoa, 2004.
- DAVID B. DOLLENMAYER (1990)
Professor of German; Humanities and Arts
B.A., Princeton University, 1967; Ph.D., 1977.
- TANJA DOMINKO (2006)
Associate Professor, Biology and Biotechnology;
Associate Professor, Bioengineering Institute;
Associate Professor Biomedical Engineering
DVM, University of Ljubljana (Slovenia), 1985; M.S., 1986;
Ph.D., University of Wisconsin - Madison, 1996.
- DANIEL J. DOUGHERTY (2002)
Professor, Computer Science
B.A., University of Maryland, 1974; Ph.D., 1982.
- JAMES K. DOYLE (1992)
Associate Professor, Social Science and Policy Studies,
and Head of Department
B.A., University of California/Berkley, 1982;
M.A., University of Colorado/Boulder, 1990; Ph.D., 1991.
- R. JAMES DUCKWORTH (1987)
Associate Professor, Electrical and Computer Engineering
B. Eng., Bradford University, 1981;
Ph.D., Nottingham University, 1984.
- JOSEPH B. DUFFY (2006)
Associate Professor, Biology and Biotechnology, and Head of
Department; Associate Professor, Chemistry and Biochemistry
B.S., Cornell University, 1987;
Ph.D., University of Texas, 1992.
- BETHEL L. EDDY (2007)
Assistant Professor of Religion, Humanities and Arts
B.S., Northeast Louisiana University, 1978;
M.A., University of North Carolina/Greensboro, 1992;
M.A., Princeton University, 1995; Ph.D., 1998.
- THOMAS EISENBARTH (2012)
Assistant Professor, Electrical and Computer Engineering
M.S., Ruhr University Bochum, 2006; Ph.D., 2009.
- LAUREEN ELGERT (2011)
Assistant Professor, Social Science and Policy Studies
B.A., Trent University, 1999;
M.Sc., University of Alberta, Edmonton, 2003;
Ph.D., London School of Economics, expected May 2011.
- TAHAR EL-KORCHI (1987)
Professor, Civil and Environmental Engineering,
and Head of Department
B.S., University of New Hampshire, 1980;
M.S., 1982; Ph.D., 1986.
- MICHAEL B. ELMES (1990)
Professor, School of Business
B.S., Union College, 1975;
M.A., Colgate University, 1979;
Ph.D., Syracuse University, 1989.
- MOHAMED Y. ELTABAKH (2011)
Assistant Professor, Computer Science
B.S., Alexandria University (Egypt), 1999; M.S., 2001;
M.S., Purdue University, 2005; Ph.D., 2010.
- ALEXANDER E. EMANUEL (1974)
Professor, Electrical and Computer Engineering
B.S., Technion, Israel Institute of Technology (Haifa), 1963;
M.S., 1965; D.Sc., 1969. P.E.

- MARION H. EMMERT (2011)
Assistant Professor, Chemistry and Biochemistry
Diploma, Albert-Ludwigs-Universität Freiburg, Germany, 2004;
Ph.D., Westfälische Wilhelms-Universität Münster, Germany, 2009.
- MICHELLE EPHRAIM (1999)
Associate Professor of English, Humanities and Arts
B.A., Tufts University, 1991;
M.A., University of Wisconsin, Madison, 1993; Ph.D., 1998.
- SIMON W. EVANS (2009)
Assistant Professor, Mechanical Engineering
Morgan-Worcester Distinguished Instructorship
B.Sc., University of Witwatersrand, South Africa, 1998;
M.S., MIT, 2001;
Ph.D., Cambridge University, UK, 2009.
- BRENTON D. FABER (2011)
Professor of Writing, Humanities and Arts;
Professor, School of Business
B.A., University of Waterloo, 1992;
M.A., Simon Fraser University, 1993;
Ph.D., University of Utah, 1998.
- RICHARD G. FALCO (1979)
Assistant Teaching Professor of Music/Director of Jazz Studies,
Humanities and Arts
B.A., University of Massachusetts, 1989;
M.A., Clark University, 1992.
- JOSEPH FARBROOK (2006)
Associate Professor, Humanities and Arts
B.A., University of Colorado/Boulder, 2001; M.F.A., 2004.
- WILLIAM W. FARR (1989)
Associate Professor, Mathematical Sciences
B.S., University of California - Davis, 1975;
M.A., University of California - Los Angeles, 1981;
Ph.D., University of Minnesota, 1986.
- JOSEPH D. FEHRIBACH (1992)
Associate Professor, Mathematical Sciences
B.A., Centre College, 1980;
M.A., Duke University 1982; Ph.D., 1985.
- DAVID FINKEL (1988)
Professor, Computer Science, and Associate Head of Department
B.A., Temple University, 1966;
M.S., University of Chicago, 1967; Ph.D., 1971.
- GREGORY S. FISCHER (2008)
Assistant Professor, Mechanical Engineering;
Assistant Professor, Biomedical Engineering;
Assistant Professor Electrical and Computer Engineering
B.S., Rensselaer Polytechnic Institute, 2002;
M.S.E., Johns Hopkins University, 2003; Ph.D., 2008.
- ILIE FISHTIK (2000)
Research Associate Professor, Chemical Engineering
M.S., University of Moldova, Chisinau, 1975;
Ph.D., Institute of Electrochemistry of the Academy of Science of USSR, Moscow, 1980.
- KATHRYN FISLER (2000)
Associate Professor, Computer Science
B.A., Williams College, 1991;
M.S., Indiana University, 1992; Ph.D., 1996.
- PATRICK FLAHERTY (2012)
Assistant Professor, Biomedical Engineering
B.S., Rochester Institute of Technology, 2000;
M.S., University of California at Berkeley, 2003; Ph.D., 2006.
- MUSTAPHA S. FOFANA (1997)
Associate Professor, Mechanical Engineering
B.S./M.S., Budapest Technical University, 1986;
M.A.S., University of Waterloo, 1989; Ph.D., 1993.
- COSME FURLONG-VAZQUEZ (1999)
Associate Professor, Mechanical Engineering;
Russell M. Searle Instructorship in Mechanical Engineering
(2010-2011)
B.Eng., University of the Americas, 1989;
M.S., Worcester Polytechnic Institute, 1992; Ph.D., 1999.
- JACOB A. GAGNON (2010)
Post-Doc Scholar, Mathematical Sciences
B.S., Massachusetts Institute of Technology, 2003;
M.S., University of Massachusetts, Amherst, 2006;
Ph.D., 2010.
- NIKOLAOS A. GATSONIS (1994)
Professor, Mechanical Engineering;
Director, Aerospace Engineering Program
B.S., Aristotelian University of Thessaloniki, 1983;
M.S., University Michigan, 1986;
M.S., Massachusetts Institute of Technology, 1987;
Ph.D., 1991.
- GLENN R. GAUDETTE (2006)
Associate Professor, Biomedical Engineering
B.S., University of Massachusetts/Dartmouth, 1989;
M.S., Georgia Institute of Technology, 1992;
Ph.D., State University of New York/Stony Brook, 2002.
- ROBERT J. GEGEAR (2010)
Assistant Professor, Biology and Biotechnology
B.Sc., University of Western Ontario, 1992; M.Sc., 1995;
Ph.D., 2002.
- MICHAEL A. GENNERT (1987)
Professor, Computer Science;
Professor, Electrical and Computer Engineering;
Director, Robotics Engineering Program
S.M.E.E., S.B.C.S., S.B.E.E., Massachusetts Institute of Technology, 1980; Sc.D., 1987.
- ARNE GERICKE (2011)
Professor, Chemistry and Biochemistry, and Head of Department;
John C. Metzger, Jr. Professor in Chemistry
B.S., University of Hamburg (Germany), 1988; Ph.D., 1994.
- ARTHUR GERSTENFELD (1976)
Professor, School of Business
B.M.E., Rensselaer Polytechnic Institute, 1950;
M.S., Massachusetts Institute of Technology, 1966; Ph.D., 1967.
- DARRYL GILL (2012)
Assistant Professor, Military Science
- JANICE D. GOBERT (2005)
Associate Professor, Social Science and Policy Studies;
Associate Professor, Computer Science
B.A., Laurentian University (Canada), 1985;
M.A., McGill University (Canada), 1989;
Ph.D., University of Toronto (Canada), 1994.

- DOMINIC GOLDING (2007)
Associate Teaching Professor, IGSD
B.A., Exeter College, 1981;
M.A., Clark University, 1986; Ph.D., 1988.
- ROGER S. GOTTLIEB (1981)
Professor of Philosophy, Humanities and Arts
B.A., Brandeis University, 1968; Ph.D., 1975.
- JOHN GOULET (1993)
Assistant Teaching Professor, Mathematical Sciences
B.S., Worcester Polytechnic Institute, 1973;
M.S., Rensselaer Polytechnic Institute, 1974; Ph.D., 1976.
- DEBORAH E. GRAY (1991)
Adjunct Instructor of History, Humanities and Arts
B.A., Elmira College, 1971;
M.A., Clark University, 1989.
- PHILIP J. GREBINAR (1972)
Associate Professor, Physical Education and Athletics
B.S., State University College at Cortland, 1971; M.S., 1972.
- FEDERICO GUAZZONE (2010)
Research Assistant Professor, Chemical Engineering
Ph.D., Worcester Polytechnic Institute, 2006.
- SELÇUK I. GUCERI (2011)
Bernard M. Gordon Dean of Engineering;
Professor, Mechanical Engineering
B.S., M.S., Middle East Technical University, 1960;
Ph.D., North Carolina State University, 1976.
- JOSHUA D. GUTTMAN (2009)
Professor, Computer Science
A.B., Princeton University, 1975;
Ph.D., University of Chicago, 1984.
- HOSSEIN HAKIM (1984)
Associate Professor, Electrical and Computer Engineering
B.S.E.E., Arya Mehr University (Iran), 1975;
M.S.E.E., Purdue University, 1977; Ph.D., 1982.
- JOHN HALL (1999)
Teaching Professor, Mechanical Engineering
Ph.D., University of Florida, 1962.
- MARGARITA HALPINE (2006)
Assistant Teaching Professor, Humanities and Arts
B.A., College of New Rochelle, 1976;
M.A., Columbia University, 1980; M. Ph., 1984;
Ph.D., University of Connecticut, 1995.
- GLYNIS M. HAMEL (1991)
Teaching Assistant Coordinator;
Instructor, Computer Science
B.S., University of Lowell, 1977;
M.S., Worcester Polytechnic Institute, 1986.
- JAMES P. HANLAN (1975)
Professor of History, Humanities and Arts
A.B., College of the Holy Cross, 1967;
M.A., Clark University, 1971; Ph.D., 1979.
- PETER H. HANSEN (1992)
Associate Professor of History, Humanities and Arts
B.A., Carleton College, 1984;
M.A., Harvard University, 1986; Ph.D., 1991.
- FREDERICK L. HART (1974)
Professor, Civil and Environmental Engineering
B.S.E., University of Connecticut, 1969;
M.S., 1971; Ph.D., 1974.
- GEORGE HEATON (1986)
Adjunct Associate Professor, Social Science and Policy Studies
B.S., University of Pennsylvania, 1969;
J.D., Boston University, 1974.
- KAREN A. HEBERT-MACCARO (2011)
Professor of Practice, School of Business, Associate Dean of Business
B.A., University of Massachusetts/Dartmouth, 1996; M.Ed., 2000;
Ph.D., Boston College, 2008.
- NEIL T. HEFFERNAN (2002)
Associate Professor, Computer Science;
Associate Professor, Social Science and Policy Studies
B.A., Amherst College, 1993;
M.S., Carnegie Mellon University, 1998; Ph.D., 2001.
- DESTIN HEILMAN (2006)
Assistant Teaching Professor, Chemistry and Biochemistry
B.S., The Pennsylvania State University, 2000;
Ph.D., University of Massachusetts Medical School, 2006.
- GEORGE T. HEINEMAN (1996)
Associate Professor, Computer Science
B.A., Dartmouth College, 1989;
M.S., Columbia University, 1990; Ph.D., 1996.
- ARTHUR C. HEINRICHER, JR. (1992)
Professor, Mathematical Sciences; Dean of Undergraduate Studies
B.S., University of Missouri/St. Louis, 1980;
Ph.D., Carnegie Mellon University, 1986.
- HUONG NGO HIGGINS (1998)
Associate Professor, School of Business
B.A., (French), University of Ho Chi Minh City, 1990;
B.A., (English), 1990;
M.A., Georgia State University, 1996; Ph.D., 1998.
- LORRAINE D. HIGGINS (2003)
Associate Teaching Professor, Humanities and Arts;
Director of The Writing Center
B.A., Carnegie Mellon University, 1985; M.A., 1991;
Ph.D., 1992.
- ALLEN H. HOFFMAN (1970)
Professor, Mechanical Engineering, and Associate Head of
Department; Professor, Biomedical Engineering
B.S., Worcester Polytechnic Institute, 1963; M.S., 1967;
Ph.D., University of Colorado, 1970. P.E.
- MICHA HOFRI (1998)
Professor, Computer Science
B.S., Technion-IIT (Haifa), 1964; M.S., 1965; D.Sc., 1972.
- ZHIKUN HOU (1991)
Professor, Mechanical Engineering
B.S., Fudan University, 1974;
M.S., Tongji University, 1981;
M.S., California Institute of Technology, 1986; Ph.D., 1990.

- RAPHAEL D. HOWARD III (2012)
Assistant Professor of Military Science
B.S. Psychology with concentrations/minors in Women's Studies and Middle East Studies, Worcester State College, 2007;
Afghan Cultural Studies Certificate, University of Nebraska Omaha, 2009;
US Army Reserve, Captain (CPT), Civil Affairs.
- FRANK HOY (2009)
Professor, School of Business
Director, Collaborative for Entrepreneurship and Innovation;
Paul Beswick Professorship of Innovation and Entrepreneurship
B.B.A., University of Texas at El Paso, 1967;
M.B.A., University of North Texas, 1970;
Ph.D., Texas A&M University, 1979.
- XIN-MING HUANG (2006)
Associate Professor, Electrical and Computer Engineering
B.S., Northwestern Polytechnic University (China), 1994;
M.Eng., 1996;
Ph.D., Virginia Polytechnic Institute and State University, 2001.
- XUEYING HUANG (2011)
Visiting Assistant Professor, Mathematical Sciences
B.S., Beijing Normal University (China), 2002; M.S., 2005;
Ph.D., Worcester Polytechnic Institute, 2009.
- MAYER HUMI (1971)
Professor, Mathematical Sciences
B.S., Hebrew University of Jerusalem, 1963; M.S., 1964;
Ph.D., Weizmann Institute of Science, 1969.
- ALLISON HUNTER (2008)
Instructor, Biology and Biotechnology
B.S., Pennsylvania State University, 1998;
M.S., Worcester Polytechnic Institute, 2007.
- GERMANO S. IANNACCHIONE (1998)
Associate Professor, Physics, and Head of Department
B.S., University of Akron, 1987; M.S., 1990;
Ph.D., Kent State University, 1993.
- CHARLES L. INNIS, JR. (2010)
Assistant Teaching Professor, Mechanical Engineering
B.S., University of Massachusetts, Amherst 1965; M.S., 1967;
Ph.D., Worcester Polytechnic Institute, 1975.
- ANJANA JAIN (2011)
Assistant Professor, Biomedical Engineering
B.S., John Hopkins University, 2000;
M.S., Case Western Reserve University, 2004;
Ph.D., Georgia Institute of Technology, 2007.
- SUSAN M. JARVIS (2005)
Assistant Teaching Professor, Electrical and Computer Engineering
B.S., University of Massachusetts/Dartmouth, 1985;
M.S., 1987; Ph.D., 2012.
- J. SCOTT JUSTO (2004)
Associate Professor, Interdisciplinary and Global Studies Division
B.S., Empire State College (SUNY), 1992;
M.A., University of Albany (SUNY), 1998;
Ph.D., Clark University, 2004.
- SILVIA JIMENEZ (2010)
Post-Doc Scholar, Mathematical Sciences
B.S., University of Costa Rica, 2002;
M.S., Louisiana State University, 2006; Ph.D., 2010.
- MELISSA-SUE S. JOHN (2010)
Assistant Professor, Social Science and Policy Studies
B.A., Hunter College, 2004;
M.A., University of Connecticut, 2008; Ph.D., 2010.
- SHARON A. JOHNSON (1988)
Associate Professor, School of Business
B.S., University of Michigan, 1983;
M.S., Cornell University, 1986; Ph.D., 1989.
- GEORGE A. KAMINSKI (2008)
Associate Professor, Chemistry and Biochemistry
Leonard P. Kinnicutt Associate Professor
B.S./M.S., Moscow Institute of Physics and Technology, 1990;
M.S., Yale University, 1993; Ph.D., 1998.
- HEKTOR KASHURI (2008)
Assistant Teaching Professor, Physics
B.S., University of Tirana (Albania), 1997;
ICTP Diploma, The Abdus Salam ICTP (Italy), 2000;
Ph.D., Northeastern University, 2008.
- CHICKERY J. KASOUF (1990)
Associate Professor, School of Business
B.A., Providence College, 1975;
M.B.A., Syracuse University, 1985; Ph.D., 1991.
- NIKOLAOS KAZANTZIS (2001)
Professor, Chemical Engineering;
Professor, Fire Protection Engineering
B.S., University of Thesoloniki (Greece), 1990;
M.S., University of Michigan, 1992; M.S.E., 1993;
Ph.D., 1997.
- THOMAS H. KEIL (1967)
Professor, Physics
B.S., California Institute of Technology, 1961;
Ph.D., University of Rochester, 1965.
- YEESOCK KIM (2010)
Assistant Professor, Civil and Environmental Engineering
B.E., Kwandong University, Korea, 2000;
M.S., Yonsei University, Korea 2002;
Ph.D., Texas A&M University, 2007.
- ROBERT E. KINICKI (1978)
Professor, Computer Science
B.S., Case Western Reserve University, 1968;
M.S., Indiana University, 1975;
Ph.D., Duke University, 1978.
- ANDREW G. KLEIN (2007)
Assistant Professor, Electrical and Computer Engineering;
B.S., Cornell University, 1998; Ph.D., 2005;
M.S., University of California/Berkeley, 2000.
- STEPHAN A. KOEHLER (2007)
Assistant Professor, Physics
B.S., University of Michigan, 1989;
Ph.D., University of Chicago, 1997.
- STEVEN KMIOTEK (2012)
Assistant Teaching Professor, Chemical Engineering
Ph.D., Worcester Polytechnic Institute, 1986.
- RENATA KONRAD (2009)
Assistant Professor, School of Business
B.A.S., University of Toronto, 1999; M.A.S., 2004;
Ph.D., Purdue University, 2009.

- J. ROBERT KRUEGER (2004)
Associate Professor, Interdisciplinary and Global Studies Division;
Associate Professor, Social Science and Policy Studies
B.S., Oklahoma State University, 1991;
M.S.L., Vermont Law School, 1992;
M.A., Clark University, 1998; Ph.D., 2004.
- MAJOR JEREMY T. KRUGER (2010)
Assistant Professor, Air Force and Aerospace Studies
B.S., University of California, Davis, 2001;
M.S., University of California, Los Angeles, 2006.
- UMA T. KUMAR (1996)
Assistant Teaching Professor, Chemistry and Biochemistry
Ph.D., University of Cincinnati, 1993.
- DIANA A. LADOS (2006)
Associate Professor, Mechanical Engineering
B.S./M.S., Polytechnic University of Bucharest, 1997;
M.S., Southern Illinois University, 1999;
Ph.D., Worcester Polytechnic Institute, 2004.
- LIFENG LAI (2012)
Assistant Professor, Electrical and Computer Engineering
M.S., Zhejiang University, China, 2004;
Ph.D., The Ohio State University, 2007.
- CHRISTOPHER R. LAMBERT (2001)
Research Associate Professor, Bioengineering Institute, and
Associate Director, Research ad interim
B.S., University College (Wales), 1979;
Ph.D., Paisley College of Technology (Scotland), 1983.
- CHRISTOPHER J. LARSEN (1996)
Associate Professor, Mathematical Sciences
B.S., Carnegie Mellon University, 1989;
J.D., University of Maryland School of Law, 1992;
M.S., Carnegie Mellon University, 1994; Ph.D., 1996.
- SUZANNE LEPAGE (2007)
Instructor, Civil Engineering
B.S. Worcester Polytechnic Institute, 1995.
- JIANYU LIANG (2004)
Associate Professor, Mechanical Engineering;
Associate Professor Chemical Engineering
B.S., Central South University (China), 1995; M.E., 1998;
Ph.D., Brown University, 2004.
- ROBERT W. LINDEMAN (2005)
Associate Professor, Computer Science
B.A., Brandeis University, 1987;
M.S., University of Southern California, 1992;
D.Sc., The George Washington University, 1999.
- KENT P. LJUNQUIST (1977)
Professor of English, Humanities and Arts
B.A., Clark University, 1970;
M.A., University of Connecticut, 1972;
Ph.D., Duke University, 1975.
- ELEANOR T. LOIACONO (2000)
Associate Professor, School of Business
B.A., Boston University, 1992;
M.B.A., Boston College, 1996;
Ph.D., University of Georgia, 2000.
- FRED J. LOOFT (1980)
Professor, Electrical and Computer Engineering;
Professor, Biomedical Engineering;
Professor, Mechanical Engineering; Professor, Robotics Engineering;
Associate Director, Robotics Engineering Program; and
Academic Director of Systems Engineering
B.S., University of Michigan, 1973; M.S., 1974, 1976; Ph.D., 1979.
- FERNANDO LOPEZ-GARCIA (2011)
Visiting Assistant Professor, Mathematical Sciences
B.S., Universidad de Buenos Aires, 2002; Ph.D., 2010.
- REINHOLD LUDWIG (1986)
Professor, Electrical and Computer Engineering;
Diplom-Ingenieur, University of Wuppertal (West Germany), 1983;
Ph.D., Colorado State University, 1986.
- ROGER YIN-MAN LUI (1983)
Professor, Mathematical Sciences
B.S., University of Minnesota, 1975; Ph.D., 1981.
- KONSTANTIN A. LURIE (1989)
Professor, Mathematical Sciences
M.Sc., Leningrad Polytechnical Institute (USSR), 1959;
Ph.D., A.F. Ioffe Physical-Technical Institute, Academy of Sciences (USSR), 1964; D.Sc., 1972.
- YI H. MA (1967)
Professor, Chemical Engineering
James H. Manning Professor in Chemical Engineering
B.S., National Taiwan University, 1959;
M.S., University of Notre Dame, 1963;
Sc.D., Massachusetts Institute of Technology, 1967.
- JOHN C. MACDONALD (2001)
Associate Professor, Chemistry
B.A., Bowdoin College, 1987;
Ph.D., University of Minnesota, 1993.
- AARTI S. MADAN (2010)
Assistant Professor of Spanish, Humanities and Arts
M. A., Birmingham-Southern College, 2004;
B.A., University of Pittsburgh, 2007; Ph.D., 2010.
- RYAN SMITH MADAN (2011)
Assistant Teaching Professor, Humanities and Arts
B.A., University of California, Los Angeles, 2002;
Ph.D., University of Pittsburgh, (anticipated 2010).
- SERGEY N. MAKAROV (2000)
Professor, Electrical and Computer Engineering
M.S., St. Petersburg State University (Russia), 1982;
Ph.D., 1986.
- MAKHOLOUF M. MAKHOLOUF (1989)
Professor, Mechanical Engineering;
Director, Aluminum Casting Research Laboratory
B.S., American University (Cairo), 1978;
M.S., New Mexico State University, 1981;
Ph.D., Worcester Polytechnic Institute, 1990.
- RAJIB B. MALLICK (1998)
Professor, Civil & Environmental Engineering;
Ralph H. White Family Distinguished Professorship
B.S., Jadavpur University (India), 1989;
M.S., Auburn University, 1993; Ph.D., 1997.

- V.J. MANZO (2012)
Assistant Professor of Music, Humanities and Arts
B.A., Kean University, 2005;
M.M., New York University, 2007;
Ph.D., Temple University, 2012.
- IVAN MARDILOVICH (1999)
Research Associate Professor, Chemical Engineering
Ph.D., Peoples' Friendship University of Russia, 1982.
- WILLIAM J. MARTIN (2000)
Professor, Mathematical Sciences
B.A., State University of New York/Potsdam, 1986;
M.A., 1986; Ph.D., University of Waterloo (Canada), 1992.
- YEHIA MASSOUD (2012)
Professor and Department Head, Electrical and Computer Engineering
B.S., Cairo University, 1991; M.S., 1994;
Ph.D., Massachusetts Institute of Technology, 1999.
- LAUREN M. MATHEWS (2003)
Associate Professor, Biology and Biotechnology
B.A., Connecticut College, 1996;
Ph.D., University of Louisiana/Lafayette, 2001.
- PAUL P. MATHISEN (1993)
Professor, Civil and Environmental Engineering
B.S., University of Massachusetts, 1984;
S.M., Massachusetts Institute of Technology, 1989; Ph.D., 1993.
- INGRID E. MATOS-NIN (2003)
Assistant Teaching Professor of Spanish, Humanities and Arts
B.A., Universidad de Puerto Rico/Mayaguez, 1981;
B.A., Pontificia Universidad Católica de Puerto Rico, 1984;
M.A., 1988; B.S., 1997;
Ph.D., Boston University, 2004.
- JOHN A. MCNEILL (1994)
*Associate Professor and Associate Head of Department,
Electrical and Computer Engineering*
A.B., Dartmouth College, 1983;
M.S., University of Rochester, 1991;
Ph.D., Boston University, 1994.
- JENNIFER MCWEENY (2012)
Associate Professor, Humanities and Arts
B.A., The Colorado College, 1998;
M.A., University of Hawaii, 2000;
M.A., University of Oregon, 2003; Ph.D., 2005.
- BRIAN J. MEACHAM (2007)
*Associate Professor, Fire Protection Engineering;
Associate Professor Civil and Environmental Engineering*
B.S., Worcester Polytechnic Institute, 1984; M.S., 1991;
Ph.D., Clark University, 2000.
- DAVID MEDICH (2012)
Assistant Professor, Physics
B.S., Union College, 1990;
M.A., State University of New York at Buffalo, 1993;
Ph.D. University of Massachusetts/Lowell, MA 1997.
- YITZHAK MENDELSON (1983)
*Associate Professor, Biomedical Engineering;
Associate Professor, Electrical and Computer Engineering*
B.S., State University of New York at Buffalo, 1975; M.S., 1976;
Ph.D., Case Western Reserve University, 1983.
- WILLIAM R. MICHALSON (1992)
Professor, Electrical and Computer Engineering;
B.S. E.E., Syracuse University, 1981;
M.S., Worcester Polytechnic Institute, 1985; Ph.D., 1989.
- FABIENNE MILLER (2007)
Assistant Professor, School of Business
M.M., Ecole de Management de Lyon, 1985;
M.P.A., Montana State University, 1998;
Ph.D., Michigan State University, 2007.
- JAMIE P. MONAT (2004)
*Director, Executive Education;
Adjunct Assistant Professor of Management, Corporate and
Professional Education*
B.S., Princeton University, 1973;
M.S., Stanford University, 1974; Ph.D., 1978.
- MSG JAVIER MONTANEZ, INFANTRY (2010)
Senior Military Instructor, Military Science
- IRVIN W. MORGAN (2012)
Professor of Practice, School of Business
Ph.D., Rensselaer Polytechnic Institute, 2003;
MDIV, Andover Newton Theological School, 2007.
- BRIAN MORIARTY (2009)
*Professor of Practice, Interactive Media and Game
Development Program*
B.A., Southeastern Massachusetts University, 1978;
E.Ed., Framingham State College, 2009.
- UMBERTO MOSCO (2005)
*Professor, Mathematical Sciences;
Harold J. Gay Chaired Professorship in Mathematics*
Laurea in Mathematical Sciences, University of Rome, 1959;
Laurea in Physics, University of Rome, 1961;
Libera Docenza in Mathematical Methods in Physics, Italy, 1967.
- WESLEY T. MOTT (1987)
Professor of English; Humanities and Arts
A.B., Boston University, 1968; A.M., 1969; Ph.D., 1974.
- BALGOBIN NANDRAM (1989)
Professor, Mathematical Sciences
B.Sc., University of Guyana, 1977, Dip. Ed., 1979;
M.Sc., University of London, Imperial College, 1981;
Ph.D., University of Iowa, 1989.
- STEPHEN S. NESTINGER (2009)
Assistant Professor, Mechanical Engineering
B.S., University of California, Davis, 2003; M.S., 2005;
Ph.D., 2009.
- SVETLANA NIKITINA (2004)
*Coordinator of Interdisciplinary First Year Humanities;
Adjunct Assistant Professor, Humanities and Arts*
B.A./M.A., Moscow University (Russia), 1984; Ph.D., 1988;
Ed.M., Harvard University, 1999.
- MARK NORIGE (2012)
Professor of Practice, Biomedical Engineering
M.B.A., Babson College.

KATHY A. NOTARIANNI

Associate Professor, Fire Protection Engineering, and Head of Department; Associate Professor, Mechanical Engineering; Associate Professor, Chemical Engineering
B.S., Worcester Polytechnic Institute, 1986; M.S., 1989;
M.S., Carnegie Mellon University, 1997; Ph.D., 2000.

KAREN KASHMANIAN OATES (2010)

Professor of Biology and Biotechnology;
Peterson Family Dean of Arts and Sciences
B.S., Rochester Institute of Technology, 1973;
Ph.D., The George Washington University, 1985.

DEAN O'DONNELL (1993)

Assistant Teaching Professor, Humanities and Arts
B.S., Worcester Polytechnic Institute, 1986;
M.F.A., Brandeis University, 1990.

PINAR OKUMUS (2012)

Assistant Teaching Professor, Civil Engineering
Ph.D., University of Wisconsin, Madison, 2012.

DAVID J. OLINGER (1990)

Associate Professor, Mechanical Engineering
B.S., Lafayette College, 1983;
M.S., Rensselaer Polytechnic Institute, 1985;
M.S., Yale University, 1988; Ph.M., 1988; Ph.D., 1990.

SARAH D. OLSON (2011)

Associate Professor, Mathematical Sciences
B.A. Providence College, 2003;
M.S., University of Rhode Island, 2005;
Ph.D., North Carolina State University, 2008.

CAGDAS ONAL (2013)

Assistant Professor, Mechanical Engineering
B.Sc., Sabanci University, Istanbul, Turkey, 2003; M.Sc., 2005;
Ph.D., Carnegie Mellon University, 2009.

JOHN A. ORR (1977)

Professor, Electrical and Computer Engineering;
B.S., University of Illinois, 1969;
M.S., Stanford University, 1970;
Ph.D., University of Illinois, 1977.

ERIC W. OVERSTRÖM (2004)

Professor, Biology and Biotechnology, Provost
B. A., SUNY Oswego, 1974;
M.S., University of Massachusetts/Amherst, 1978;
Ph.D., 1981.

TASKIN PADIR (2008)

Assistant Professor, Electrical and Computer Engineering;
Joseph Samuel Satin Distinguished Fellow in Electrical and Computer Engineering
B.S., Middle East Technical University (Turkey), 1993;
M.S., Purdue University, 1997; Ph.D., 2004.

LTC FEDENCIA E. PAGADUAN (2003)

Assistant Professor, Military Science
B.S., Santa Clara University, 1989.

RAYMOND L. PAGE (2006)

Assistant Professor, Biomedical Engineering
B.S., West Virginia University, 1987; M.S., 1989;
Ph.D., Virginia Polytechnic Institute and State University, 1993.

KAVEH PAHLAVAN (1985)

Professor, Electrical and Computer Engineering
M.S., University of Teheran, 1975;
Ph.D., Worcester Polytechnic Institute, 1979.

OLEG V. PAVLOV (2002)

Associate Professor, Social Science and Policy Studies
B.S., University of Southern California, 1994; Ph.D., 2000.

CREIGHTON PEET (2000)

Associate Teaching Professor, Interdisciplinary and Global Studies Division
B.A., Harvard College, 1966;
P.Phil., Columbia University, 1978; Ph.D., 1978.

JOSEPH D. PETRUCELLI (1978)

Professor, Mathematical Sciences and Associate Head of Department
A.B., Boston College, 1971;
M.S., Purdue University, 1974; Ph.D., 1978.

GEORGE D. J. PHILLIES (1985)

Professor, Physics
S.B., Massachusetts Institute of Technology, 1969, M.S., 1971;
D.Sc., 1973.

ADRIENNE HALL PHILLIPS (2011)

Assistant Professor, School of Business
B.S., North Carolina AT&T State University, 2000;
M.S. Purdue University, 2008; Ph.D., 2011.

ROBERTO PIETROFORTE (1992)

Associate Professor, Civil and Environmental Engineering
Laurea, University of Rome, 1974;
M.S., Massachusetts Institute of Technology, 1987; M.S., 1989;
Ph.D., 1992.

GEORGE D. PINS (2000)

Associate Professor, Biomedical Engineering, and Associate Head of Department
B.S., Rutgers College of Engineering, 1989;
Ph.D., Rutgers University, 1996.

DAVID C. PLANCHARD (2011)

Instructor, Mechanical Engineering
B.S., Northeastern University, 1980;
M.S., Worcester Polytechnic Institute, 1992.

JEANINE D. PLUMMER (1999)

Associate Professor, Civil and Environmental Engineering;
Director, Environmental Engineering; and
Associate Head of Department
Alena and David M. Schwaber '65 Endowed Professorship in Environmental Engineering
B.S., Cornell University, 1993;
M.S., University of Massachusetts/Amherst, 1995; Ph.D., 1999.

SAMUEL M. POLITZ (1988)

Associate Professor, Biology and Biotechnology
B.S., Louisiana State University, 1973;
Ph.D., University of California at Los Angeles, 1978.

GARY F. POLLICE (2002)

Professor of Practice, Computer Science
B.A., Rutgers University, 1973;
M.S., University of Massachusetts/Lowell, 1994.

- MARKO B. POPOVIC (2010)
Assistant Research Professor, Physics
B.S., Belgrade University, 1995;
M.S., Ohio State University, 1996;
Ph.D., Boston University, 2001.
- REETA PRUSTY RAO (2005)
Associate Professor, Biology and Biotechnology;
Associate Professor, Chemistry and Biochemistry
B.S., Birla Institute of Technology and Science (India), 1991;
M.S., Drexel University, 1994;
Ph.D., Penn State University Medical College, 1999.
- RYSZARD J. PRYPUTNIEWICZ (1978)
Professor, Mechanical Engineering; Professor, Electrical and
Computer Engineering; Kenneth G. Merriam Distinguished
Professor in Mechanical Engineering
B.S., University of Hartford, 1972;
M.S., University of Connecticut, 1974; Ph.D., 1976. P.E.
- MILOSH PUCHOVSKY (2002)
Professor of Practice, Fire Protection Engineering;
B.S., Worcester Polytechnic Institute, 1988; M.S., 1991.
- CRAIG B. PUTNAM (2010)
Instructor, Computer Science
B.S., St. Lawrence University, 1974;
M.S., Penn State University, State College, 1976;
ABD, MSTE, Tufts University (current)
- RICHARD S. QUIMBY (1982)
Associate Professor, Physics
B.S., Clarkson College of Technology, 1975;
Ph.D., University of Wisconsin at Madison, 1979.
- MICHAEL J. RADZICKI (1990)
Associate Professor, Social Science and Policy Studies
B.A., St. Norbert College, 1979;
M.A., University of Notre Dame, 1982; Ph.D., 1985.
- NIMA RAHBAR (2012)
Assistant Professor, Civil and Environmental Engineering;
Assistant Professor of Mechanical Engineering
B.S., Sharif Institute of Technology, 1998;
M.S., Northeastern University, 2003;
Ph.D., Princeton University, 2008.
- L. RAMDAS RAM-MOHAN (1978)
Professor, Physics; Professor, Electrical and Computer Engineering
B.S., Delhi University (India), 1964;
M.S., Purdue University, 1967; Ph.D., 1971.
- ALI S. RANGWALA (2006)
Associate Professor, Fire Protection Engineering;
Associate Professor, Chemical Engineering
B.S., Government College of Engineering (India), 2000;
M.S., University of Maryland, 2002;
Ph.D., University of California, San Diego, 2006.
- DAVID A. RAWSON (2008)
Adjunct Assistant Professor of History, Humanities and Arts
B.A. Salem State College, 1989;
Ph.D., the College of William & Mary, 1998.
- MARK P. RICE (2010)
Professor, School of Business; Dean of Business
B.S., Rensselaer Polytechnic Institute, 1971;
M.S., 1979; Ph.D., 1992.
- CHARLES RICH (2007)
Professor, Computer Science and Interactive Media and
Game Development
B.A. Sc., University of Toronto (Canada), 1973;
S.M., Massachusetts Institute of Technology, 1975; Ph.D., 1980.
- MARK W. RICHMAN (1985)
Associate Professor, Mechanical Engineering
B.S., State University of New York at Buffalo;
M.S., University of Michigan, 1979;
Ph.D., Cornell University, 1983.
- KENT J. RISSMILLER (1988)
Associate Dean, Interdisciplinary and Global Studies Division;
Associate Professor, Social Science and Policy Studies
A.B., Muhlenberg College, 1976;
J.D., Franklin Pierce Law Center, 1980;
M.A., Syracuse University, 1981; Ph.D., 1986.
- ANGEL A. RIVERA (1994)
Associate Professor of Spanish; Humanities and Arts
B.A., University of Puerto Rico, 1983; M.A., 1987;
Ph.D., Rutgers University, 1994.
- THOMAS ROBERTSON (2006)
Associate Professor, Humanities and Arts
B.A., Williams College, 1989;
M.A., The University of Wisconsin, 1999; Ph.D., 2005.
- MARSHA W. ROLLE (2007)
Assistant Professor, Biomedical Engineering
B.S., Brown University, 1995;
Ph.D., University of Washington, 2003.
- YIMING RONG (1998)
Professor, Mechanical Engineering
John Woodman Higgins Professorship (2002-2005)
(2005-2008) (2008-2011), and
Associate Director of Manufacturing Engineering
B.S., Harbin University of Science and Technology (China), 1981;
M.S., Tsinghua University (China), 1984;
M.S., University of Wisconsin-Madison, 1987;
Ph.D., University of Kentucky, 1989.
- DERREN ROSBACH (2012)
Assistant Teaching Professor, Civil Engineering
Ph.D., Virginia Polytechnic Institute, 2010.
- JOSHUA P. ROSENSTOCK (2005)
Associate Professor, Humanities and Arts
B.A., Brown University, 1996;
M.F.A., School of Art Institute of Chicago, 2004.
- JENNIFER M. RUDOLPH (2007)
Associate Professor of Asian History, Humanities and Arts; and
Associate Head for the Humanities
A.B., University of Chicago, 1985;
M.A., University of Washington, 1993; Ph.D., 1999.
- CAROLINA RUIZ (1998)
Associate Professor, Computer Science
B.S., University of Los Andes, Colombia, 1988; B.S., 1989;
M.S., 1990;
Ph.D., University of Maryland, College Park, 1996.
- SFC LOUIS RUIZ (2009)
Instructor, Military Science

- JILL RULFS (1990)
*Associate Professor, Biology and Biotechnology;
and Associate Head of Department*
B.S., University of Massachusetts, 1973;
Ph.D., Tufts University, 1982.
- ELKE A. RUNDENSTEINER (1996)
Professor, Computer Science
B.S., Johann Wolfgang Goethe University, Frankfurt,
West Germany; M.S., 1984;
M.S., Florida State University, 1987;
Ph.D., University of California, Irvine, 1992.
- ELIZABETH F. RYDER (1996)
Associate Professor, Biology and Biotechnology
A.B., Princeton University, 1980;
M.S., Harvard School of Public Health, 1985;
Ph.D., Harvard Medical School, 1993.
- AARON R. SAKULICH (2012)
Assistant Professor, Civil and Environmental Engineering
B.S., Drexel University, 2009; Ph.D., 2009.
- KHALID SAEED (1997)
Professor, Social Science and Policy Studies
B.S., University of Engineering and Technology, Parkistan, 1968;
M.E., Asian Institute of Technology, Thailand, 1975;
Ph.D., Massachusetts Institute of Technology, 1981.
- GUILLERMO F. SALAZAR (1983)
Associate Professor, Civil and Environmental Engineering
B.S., University of La Salle (Mexico), 1971;
M.Eng., University of Toronto, 1977;
Ph.D., Massachusetts Institute of Technology, 1983.
- M. DAVID SAMSON (1991)
Associate Professor of Art History/Architecture, Humanities and Arts
B.A., University of Chicago, 1980;
Ph.D., Harvard University, 1988.
- JOHN SANBONMATSU (2003)
Associate Professor, Humanities and Arts
B.A., Hampshire College, 1984;
Ph.D., University of California at Santa Cruz, 2000.
- SABYASACHI (SABY) SARKAR (2011)
Assistant Teaching Professor, Physics
B.S., Indian Institute of Technology (Kharagpur), 2000;
M.S., University of Minnesota, 2002;
Ph.D., University of Nebraska-Lincoln, 2008.
- MARCUS SARKIS (1998)
Professor, Mathematical Sciences
B.S., Instituto Tecnológico de Aeronáutica (Brazil), 1984;
M.S., Pontifícia Universidade Católica de Rio de Janeiro
(Brazil), 1989;
Ph.D., New York University, 1994.
- BRIAN J. SAVILONIS (1981)
*Professor, Mechanical Engineering;
Professor, Biomedical Engineering*
B.S., Worcester Polytechnic Institute, 1972; M.S., 1973;
Ph.D., State University of New York, 1976.
- HASANJAN SAYIT (2007)
Assistant Professor, Mathematical Sciences
B.S./M.S., Xinjiang University (China), 1998;
M.S., Cornell University, 2004; Ph.D., 2005.
- CHRISTOPHER SCARPINO (2011)
Adjunct Instructor, Mechanical Engineering
B.A., University of Pittsburgh at Johnstown, 1985; B.S., 1990;
M.S., Worcester Polytechnic Institute, 1994.
- LANCE E. SCHACHTERLE (1970)
Professor of English; Humanities and Arts
A.B., Haverford College, 1966;
A.M., University of Pennsylvania, 1968; Ph.D., 1970.
- JEROME J. SCHAUFELD (2005)
Professor of Practice, School of Business
B.S., New Jersey Institute of Technology;
M.B.A., Northeastern University.
- BRIGITTE I. SERVATIUS (1987)
Professor, Mathematical Sciences
Magister der Naturwissenschaften der Universität Graz,
Austria, 1978;
Ph.D., Syracuse University, 1987.
- EUNMI SHIM (2002)
Associate Professor, Humanities and Arts
B.M., Seoul National University (Korea), 1987;
M.M., University of Illinois at Urbana-Champaign, 1993;
Ph.D., 1999.
- SATYA SHIVKUMAR (1990)
*Professor, Mechanical Engineering;
Professor, Biomedical Engineering*
B.S., Regional Engineering College, 1978;
M.S., Indian Institute of Technology, 1980;
M.S., Stevens Institute of Technology, 1987; Ph.D., 1987.
- INGRID SHOCKEY (2008)
*Assistant Teaching Professor, Interdisciplinary and
Global Studies Division*
B.A., Clark University, 1987;
M.A., Brandeis University, 1991; Ph.D., 1996.
- CRAIG A. SHUE (2011)
Assistant Professor, Computer Science
B.S., Ohio University, 2004;
M.S., Indiana University, 2006; Ph.D., 2009.
- ALBERT SIMEONI (2010)
Associate Professor, Fire Protection Engineering
B.Sc., University of Corsica, 1994;
M.Eng., IUSTI, Marseille, 1996;
M.Sc., University of Provence, 1996;
Ph.D., University of Corsica, 2000.
- RICHARD D. SISSON, JR. (1976)
*Dean of Graduate Studies; George F. Fuller Professorship
(2004-2007) (2007-2010) (2010-2013)*
*Director of Manufacturing and Materials Engineering;
Professor, Mechanical Engineering;*
B.S., Virginia Polytechnic Institute, 1969;
M.S., Purdue University, 1971; Ph.D., 1975.
- JEANINE L. SKORINKO (2007)
Assistant Professor, Social Science and Policy Studies
A.A., Simon's Rock College, 1999;
B.A., Rice University, 2001;
M.A., University of Virginia, 2004; Ph.D., 2007.

- ALEXANDER D. SMITH (2010)
Assistant Professor, Social Science and Policy Studies
B.A., York University, 2003;
M.A., University of Toronto, 2004;
Ph.D., University of Calgary, 2010.
- RUTH L. SMITH (1983)
Associate Professor of Religion, Humanities and Arts
B.A., East Tennessee State University, 1969;
M.A., Ohio University, 1971;
M.T.S., Harvard University Divinity School, 1976;
Ph.D., Boston University, 1982.
- BRITTON SNYDER (2009)
Professor of Practice, Interactive Media and Game Development Program
B.F.A., Berklee College of Music, 1997.
- DAVID I. SPANAGEL (2005)
Assistant Professor of History, Humanities and Arts
B.A., Oberlin College, 1982;
M.S. Ed., University of Rochester, 1984;
Ph.D., Harvard University, 1996.
- JAGAN SRINIVASAN (2012)
Assistant Professor, Biology and Biotechnology
Goa University, India, 1993; M.S., 1995
Ph.D., Max Planck Institute for Developmental Biology, 2003.
- KENNETH A. STAFFORD (1999)
Associate Director, Robotics Engineering
B.S., Oregon State University, 1973;
M.S., Air Force Institute of Technology, 1980.
- LTC CIRO C. STEFANO (2011)
Professor, Military Science, and Head of Department
B.S., Embry-Riddle Aeronautical University, 1992;
B.S., Texas A&M University, 1997;
M.B.A., Webster University, 2008.
- WILLIAM C. STITT (2011)
*Executive Director of the Leadership and Innovation Program;
Professor of Practice, School of Business*
B.S.M.E., Rensselaer Polytechnic Institute, 1963;
M.B.A., Harvard University Graduate School of Business Administration, 1967.
- ERIKA (RIKY) A. STONE (2010)
*Administrator of Theatre Technology and
Adjunct Instructor of Theatre, Humanities and Arts*
B.A., Massachusetts College of Liberal Arts, 2007;
B.S., Worcester State University, (anticipated 2011).
- IZABELA STROE (2008)
Assistant Professor, Physics
B.S., University of Bucharest (Romania), 1993; M.S., 1995;
Ph.D., Clark University, 2005.
- DIANE M. STRONG (1995)
*Professor, School of Business
Director of Management Information Systems Program*
B.S., University of South Dakota, 1974;
M.S., New Jersey Institute of Technology, 1978;
M.S., Carnegie Mellon University, 1983;
Ph.D., Carnegie Mellon University, 1988.
- STEPHAN STURM (2012)
Assistant Professor, Mathematical Sciences
M.S., University of Vienna, 2004;
Ph.D., TU Berlin, 2010.
- LINLIN SU (2010)
Post-Doc Scholar, Mathematical Sciences
B.S., Tsinghua University, Beijing, China, 2002; M.S., 2005;
Ph.D., University of Minnesota, 2010.
- JOHN M. SULLIVAN, JR. (1987)
*Professor, Mechanical Engineering; Associate Head of Department;
Professor, Electrical and Computer Engineering;
Professor, Biomedical Engineering*
B.S., Zoology, University of Massachusetts, 1973;
B.S., Mec.E., 1977; M.S., Mec.E., 1978;
Ph.D., Thayer School of Engineering, Dartmouth College, 1986.
- BERK SUNAR (2000)
Associate Professor, Electrical and Computer Engineering
B.S., Middle East Technical University (Turkey), 1995;
Ph.D., Oregon State University, 1998.
- RALPH SUTTER (2012)
Instructor/Lecturer, Interactive Media and Game Development
B.A., New England Institute of Art, 2010.
- KEVIN SWEENEY (2011)
Professor of Practice, School of Business
J.D., University of Wisconsin, Madison, 1990.
- EDWARD SWIERZ (2011)
Visiting Instructor, Civil and Environmental Engineering
B.S., Worcester Polytechnic Institute, 1973;
M.S., University of Illinois at Urbana-Champaign, 1975.
- DALIN TANG (1988)
*Professor, Mathematical Sciences;
Professor, Biomedical Engineering*
B.A., Nanjing Institute of Technology, 1981;
Ph.D., University of Wisconsin at Madison, 1988.
- MINGJIANG TAO (2007)
Assistant Professor, Civil and Environmental Engineering
B.S., Fuzhou University (China), 1997;
M.S., Tongji University (China), 2000;
Ph.D., Case Western Reserve University, 2003.
- STEVEN S. TAYLOR (2002)
Associate Professor, School of Business
B.S., Massachusetts Institute of Technology, 1982;
M.A., Emerson College, 1993;
Ph.D., Boston College, 2000.
- ROBERT W. THOMPSON (1976)
Professor, Chemical Engineering
B.S., Clarkson Institute of Technology, 1971; M.S., 1973;
Ph.D., Iowa State University, 1975.
- BURT S. TILLEY (2009)
*Associate Professor, Mathematical Sciences;
Associate Professor, Mechanical Engineering*
B.A., University of Lowell, 1988; B.S., 1998;
Ph.D., Northwestern University, 1994.

- MICHAEL TIMKO (2013)
Assistant Professor, Chemical Engineering
B.S., The Ohio State University, 1998;
M.S., Massachusetts Institute of Technology, 2001; Ph.D., 2004.
- MAJOR (MAJ) MICHAEL E. TISO (2012)
Assistant Professor of Military Science
B.S., Management Studies, Western New England College, 2001;
MBA, Norwich University, 2006;
US Army Reserves, Signal Corps.
- EDUARDO TORRES-JARA (2010)
Assistant Professor of Computer Science and Robotics Engineering
B.S., University Escuela Politecnica del Ejercito, Ecuador, 1995;
S.M., Massachusetts Institute of Technology, 2002; Ph.D., 2007.
- WALTER T. TOWNER (2007)
Adjunct Instructor/Lecturer, School of Business
B.S., Worcester Polytechnic Institute, 1983;
M.B.A., Babson College, 1989;
M.S., Worcester Polytechnic Institute, 2001, 2003.
- ANDREW C. TRAPP (2011)
Assistant Professor, School of Business
B.S., Rochester Institute of Technology, 2000;
M.S., Bowling Green State University, 2006;
Ph.D., University of Pittsburgh, 2011.
- ROBERT W. TRAVER (2003)
Adjunct Teaching Professor
A.B., Dartmouth College 1975;
M.S., Purdue University, 1980;
Grad Diploma, University of Canterbury, NZ, 1981;
Ed.D., Harvard University, 1991.
- BENGISU TULU (2006)
Assistant Professor, School of Business
B.S., Middle East Technical University (Turkey), 1997;
M.S. 2000;
M.S., Claremont Graduate University, 2003; Ph.D., 2006.
- ERKAN TÜZEL (2009)
Assistant Professor, Physics
B.S., Istanbul Technical University (Turkey), 1999; M.S., 2001;
Ph.D., University of Minnesota, 2006.
- VASFIYE HANDE TÜZEL (2010)
Assistant Teaching Professor, Physics
B.S., Istanbul Technical University (Turkey), 1999; M.S., 2001;
M.S., University of Minnesota, 2005; Ph.D., 2009.
- JOHN G. URANG (2012)
Assistant Professor, Humanities and Arts
B.A., Bard College, 1997;
M.S., University of Chicago, 1998; Ph.D., 2006.
- HELEN G. VASSALLO (1982)
Professor, School of Business; Professor, Biology and Biotechnology
B.S., Tufts University, 1953; M.S., 1955;
Ph.D., Clark University, 1967;
M.B.A., Worcester Polytechnic Institute, 1982.
- RICHARD F. VAZ (1983)
Associate Professor, Electrical and Computer Engineering;
Dean, Interdisciplinary and Global Studies Division
B.S.E.E., Worcester Polytechnic Institute, 1979;
M.S.E.E., 1984; Ph.D., 1987.
- KRISHNA VENKATASUBRAMANIAN (2012)
Assistant Professor, Computer Science
B.S., Webster University, 2001;
M.S., Arizona State University, 2004; Ph.D., 2009.
- DOMOKOS VERMES (1990)
Associate Professor, Mathematical Sciences
M.S. (Electrical), Technische Universitat, 1970;
M.S. (Mathematics), 1971;
Ph.D., University of Szeged, 1975.
- BOGDAN M. VERNESCU (1991)
Professor, Mathematical Sciences, and Head of Department
B.S., University of Bucharest, 1982; M.S., 1982;
Ph.D., Institute of Mathematics - Bucharest, 1989.
- SUSAN VERNON-GERSTENFELD (1987)
Adjunct Professor, Interdisciplinary and Global Studies Division;
Director of Academic Programs and Planning for IGSD
B.A., Boston University, 1962; M.S.W., 1974;
Ph.D., Boston College, 1987.
- SUSAN VICK (1981)
Professor of Drama/Theatre, and Director of Theatre,
Humanities and Arts
A.B., Catawba College, 1967;
M.F.A., Southern Methodist University, 1969;
Ph.D., University of Illinois, 1979.
- LUIS VIDALI (2009)
Assistant Professor, Biology and Biotechnology
B.S., National Autonomous University of Mexico, 1993;
Ph.D., University of Massachusetts, Amherst, 1999.
- DARKO VOLKOV (2004)
Associate Professor, Mathematical Sciences
B.Sc., University of Paris (France), 1993;
Ph.D., Rutgers University, 2001.
- HOMER F. WALKER (1997)
Professor, Mathematical Sciences
B.A., Rice University, 1966;
M.S., New York University, 1968; Ph.D., 1970.
- LIBO WANG (1990)
Research Associate Professor, Mechanical Engineering
Diploma, Tsinghua University (China), 1966;
Ph.D., Drexel University, 1991.
- JUSTIN TSUNG-YI WANG (2009)
Assistant Professor, School of Business
B.S., University of San Francisco, 2001; M.B.A., 2003;
Ph.D., Lehigh University, 2009.
- YAN WANG (2010)
Assistant Professor, Mechanical Engineering
B.E., Tianjin University, China, 2001; M.S., 2004;
Ph.D., University of Windsor, Ontario, 2008.
- MATTHEW O. WARD (1986)
Professor, Computer Science and Director of Bioinformatics
B.S., Worcester Polytechnic Institute, 1977;
M.S., University of Connecticut, 1979, Ph.D., 1981.
- PAMELA J. WEATHERS (1979)
Professor, Biology and Biotechnology;
Professor, Chemistry and Biochemistry
B.S., Marquette University, 1969;
Ph.D., Michigan State University, 1974.

- SUZANNE L. WEEKES (1998)
Associate Professor, Mathematical Sciences
B.S., Indiana University, 1989;
M.S., University of Michigan, 1990; Ph.D., 1995.
- DOUGLAS G. WEEKS (1980)
Assistant Teaching Professor/Coordinator of Music, Humanities and Arts and Associate Head for the Arts
B.S., University of New Hampshire, 1964;
M.S., Gorham State, 1968;
M.M., University of Massachusetts., 1970;
Ed.D., Boston University, 1987.
- QI WEN (2011)
Assistant Professor, Physics
B.S., Lanzhou University (China), 1998; M.Eng., 2001;
M.S., Brown University, 2005; Ph.D., 2007.
- JOANN WHITEFLEET-SMITH (1995)
Assistant Teaching Professor, Biology and Biotechnology
B.A., Hope College, 1976;
M.S., Purdue University, 1979;
Ph.D., University of Wisconsin-Madison, 1984.
- JOHN M. WILKES (1975)
Associate Professor, Social Science and Policy Studies
B.A., Bates College, 1970;
M.A., Cornell University, 1973; Ph.D., 1976.
- CRAIG E. WILLS (1990)
Associate Professor, Computer Science, and Head of Department
B.S., University of Nebraska, 1982;
M.S., Purdue University, 1984; Ph.D., 1988.
- E. VANCE WILSON
Associate Teaching Professor, School of Business
B.A., Reed College, 1974;
M.S., B.A., San Diego State University, 1992;
Ph.D., University of Colorado at Boulder, 1995.
- KRISTIN K. WOBBE (1995)
Associate Professor, Chemistry and Biochemistry;
Associate Dean of Undergraduate Studies
B.A., St. Olaf College, 1983
Ph.D., Harvard University, 1991
- ZHEYANG WU (2009)
Assistant Professor, Mathematical Sciences
B.S., Chong Qing University, China, 1998;
M.S., University of New Orleans, 2004;
M.Phil., Yale University, 2007; Ph.D., 2009.
- SHARON WULF (2007)
Professor of Practice, School of Business
Ph.D., Columbia Pacific University, 1984.
- ALEXANDER M. WYGLINSKI (2007)
Associate Professor, Electrical and Computer Engineering
B. Eng., McGill University (Canada), 1998; Ph.D., 2004;
M.S., Queen's University (Canada), 2000.
- JAMAL S. YAGOOBI (2012)
Professor, Mechanical Engineering, and Head of Department
George I. Alden Professorship in Engineering
B.S., Sharif University of Technology (Tehran), 1978;
M.S., University of Illinois (Urbana-Champaign), 1981;
Ph.D., 1984.
- VADIM V. YAKOVLEV (1999)
Research Associate Professor, Mathematical Sciences
M.S., Saratov State University (USSR), 1979; Ph.D., 1984.
- Z. AMY ZENG (1999)
Associate Professor, School of Business;
Director of Industrial Engineering Program
B.S., Beijing University of Aeronautics and Astronautics, 1990;
M.S., University of Washington, 1992;
Ph.D., The Pennsylvania State University, 1996.
- XUEMAO ZHANG (2012)
Post-Doc Scholar, Mathematical Sciences
Ph.D., University of Windsor, Canada, 2011.
- H. SUSAN ZHOU (2005)
Associate Professor, Chemical Engineering
B.S., Huazhong University (China), 1996;
M.S., Clarkson University, 1999;
Ph.D., University of California, Irvine, 2002.
- JOE ZHU (1998)
Professor, School of Business
B.M., Huzhou Normal College (China), 1987;
M.S., Southeast University (China), 1992; Ph.D., 1995;
Ph.D., University of Massachusetts, Amherst, 1998.
- KEITH ZIZZA (2011)
Professor of Practice, Interactive Media and Game Development
B.S., University of Massachusetts, 1993.
- ALEX A. ZOZULYA (1998)
Professor, Physics
B.S., Moscow Engineering Physical Institute, 1978;
Ph.D., Lebedev Physics Institute of the Academy of Sciences of the USSR, 1984.

FACULTY EMERITI

Numerals following name indicate years of service.

- ALLEN BENJAMIN (1963-1980)
Professor Emeritus, Civil Engineering
- RONALD R. BIEDERMAN (1968-2004)
Professor Emeritus, Mechanical Engineering
- VAN F. W. BLUEMEL (1966-1999)
Professor Emeritus, Physics
- JOHN M. BOYD (1966-1994)
Professor Emeritus, Mechanical Engineering
- GORDON C. BRANCHE (1959-1997)
Professor Emeritus, Mathematical Sciences
- ELLIOT R. BUELL (1957-1978)
Professor Emeritus, Mathematics
- JOHN F. CARNEY (1996-2005)
Professor Emeritus, Civil and Environmental Engineering
- A. FATTAH CHALABI (1959-1991)
Professor Emeritus, Civil Engineering
- RONALD D. CHEETHAM (1973-2006)
Professor Emeritus, Biology and Biotechnology
- EDWARD N. CLARKE (1965-1994)
Professor Emeritus

KEVIN A. CLEMENTS (1970-2008)
Professor Emeritus, Electrical and Computer Engineering

VINCENT CONNOLLY (1956-1998)
Professor Emeritus, Mathematical Sciences

EDMUND T. CRANCH (1978-1985)
Professor Emeritus and President Emeritus

THEODORE C. CRUSBERG (1969-2010)
Professor Emeritus, Biology and Biotechnology

LOUIS J. CURRAN, JR. (1966-2004)
Professor Emeritus, Humanities and Arts

ROBERT A. D'ANDREA (1974-2005)
Professor Emeritus, Civil and Environmental Engineering

PAUL DAVIS (1970-2012)
Professor Emeritus, Mathematical Sciences

FRANK D. DEFALCO (1960-1999)
Professor Emeritus, Civil and Environmental Engineering

JAMES S. DEMETRY (1971-2000)
Professor Emeritus, Electrical and Computer Engineering

RICHARD D. DESROSIERS (1972-1991)
Professor Emeritus, Civil Engineering

DAVID B. DOLLENMAYER (1990-2012)
Professor Emeritus of German, Humanities and Arts

WILHELM H. EGGIMANN (1964-1999)
Professor Emeritus, Electrical and Computer Engineering

ROBERT W. FITZGERALD (1963-2005)
*Professor Emeritus, Civil and Environmental Engineering and
Fire Protection Engineering*

MALCOM S. FITZPATRICK (1977-2006)
Professor Emeritus, Civil and Environmental Engineering

LEE FONTANELLA (1993-2002)
Professor and Department Head Emeritus, Humanities and Arts

ARTHUR GERSTENFELD (1976-2011)
Professor Emeritus, Management

LEONARD GOODWIN (1974-1989)
Professor Emeritus, Social Science and Policy Studies

HARTLEY T. GRANDIN, JR. (1957-1996)
Professor Emeritus, Mechanical Engineering

LEON S. GRAUBARD (1969-2002)
Professor Emeritus, Management

WILLIAM R. GROGAN (1946-1990)
*Professor Emeritus, Electrical Engineering;
Emeritus Dean of Undergraduate Studies*

ROBERT J. HALL (1956-1990)
*Professor Emeritus, Mechanical Engineering and
Management; Former Director of Continuing Education*

WILLIAM J. HARDELL (1960-1994)
Professor Emeritus, Mathematical Sciences

EDMUND M. HAYES (1964-1997)
Professor Emeritus, Humanities and Arts

CHARLES R. HEVENTHAL (1963-1990)
Professor Emeritus, Humanities

HAROLD W. HILSINGER (1962-1998)
Professor Emeritus, Physics

WILLIAM D. HOBEY (1963-2005)
Professor Emeritus, Chemistry and Biochemistry

STEVEN N. JASPERSON (1974-2008)
Professor Emeritus, Physics

NICHOLAS K. KILDAHL (1976-2005)
Professor Emeritus, Chemistry and Biochemistry

DIETER KLEIN (1979-1999)
Professor Emeritus, Management

MICHAEL W. KLEIN (1979-1995)
Professor Emeritus, Physics

KAREN LEMONE (1981-2008)
Professor Emeritus, Computer Science

J. J. MALONE (1971-2000)
Professor Emeritus, Mathematical Sciences

JO ANN MANFRA (1972-2006)
Professor Emeritus, Humanities and Arts

JOHN A. MAYER (1956-1990)
Professor Emeritus, Mechanical Engineering

BRUCE C. MC QUARRIE (1960-1990)
Professor Emeritus, Mathematical Sciences

LAURA J. MENIDES (1976-2005)
Professor Emeritus, Humanities and Arts

WILLIAM B. MILLER (1963-1989)
Professor Emeritus, Mathematical Sciences

WILLIAM R. MOSER (1981-2000)
Professor Emeritus, Chemical Engineering

DONALD F. NELSON (1981-2004)
Professor Emeritus, Physics

FRANCIS NOONAN (1978-2008)
Professor Emeritus, Management

MERL M. NORCROSS (1952-1994)
Professor Emeritus, Physical Education and Athletics

ROBERT NORTON (1981-2012)
Professor Emeritus, Mechanical Engineering

JOHN T. O'CONNOR (1970-2010)
*Professor Emeritus, Social Science and Policy Studies,
and Management*

NICHOLAS L. ONORATO (1955-1994)
*Professor Emeritus, Social Science and Policy Studies/Management;
Director, School of Industrial Management*

JAMES C. O'SHAUGHNESSY (1986-2012)
Professor Emeritus, Civil and Environmental Engineering

GILBERT H. OWYANG (1961-1990)
Professor Emeritus, Electrical Engineering

E. MALCOLM PARKINSON (1974-2008)
Professor Emeritus, Humanities and Arts

EDWARD A. PARRISH (1995-2004)
Professor Emeritus and President Emeritus

JAMES W. PAVLIK (1974-2007)
Professor Emeritus, Chemistry and Biochemistry

ROBERT A. PEURA (1968-2008)
Professor Emeritus, Biomedical Engineering

JOSEPH D. SAGE (1957-1994)
Professor Emeritus, Civil Engineering

ALFRED A. SCALA (1966-2011)
Professor Emeritus, Chemistry and Biochemistry

STANLEY M. SELKOW (1980-2012)
Professor Emeritus, Computer Science

THOMAS A. SHANNON (1973-2005)
Professor Emeritus, Humanities and Arts

MICHAEL M. SOKAL (1970-2005)
Professor Emeritus, Humanities and Arts

CARLTON W. STAPLES (1948-1986)
Professor Emeritus, Mechanical Engineering

ROBERT E. WAGNER (1949-1987)
Professor Emeritus, Chemical Engineering

ADRIAAN WALTHER (1972-2001)
Professor Emeritus, Physics

STEPHEN J. WEININGER (1965-2005)
Professor Emeritus, Chemistry and Biochemistry, and Interdisciplinary and Global Studies

ALVIN H. WEISS (1966-1994)
Professor Emeritus, Chemical Engineering

JERALD A. WEISS (1962-1988)
Professor Emeritus, Physics

LESLIE C. WILBUR (1957-1987)
*Professor Emeritus, Mechanical Engineering;
Professor and Chairman of Nuclear Reactor Facility Emeritus*

JOHN F. WILD (1962-1992)
Professor Emeritus, Physics

DOUGLAS W. WOODS (1970-2000)
Professor Emeritus, Social Science and Policy Studies

ROBERT G. ZALOSH (1990-2006)
Professor Emeritus, Fire Protection Engineering

JOHN F. ZEUGNER (1971-2005)
Professor Emeritus, Humanities and Arts

DONALD N. ZWIEP (1957-1990)
Professor and Department Head Emeritus, Mechanical Engineering

SPECIAL PROFESSORSHIPS

DIRAN APELIAN
Howmet Professorship of Mechanical Engineering

JOSE ARGÜELLO
Walter and Mariam B. Rutman Distinguished Professorship in Chemistry (2012-)

SIMON EVANS
Morgan-Worcester Distinguished Instructorship (2012-2013)

ARNE GERICKE
John C. Metzger, Jr. Professor in Chemistry (2011-)

SELCUK GUCERI
Bernard M & Sophia Gordon Dean in Engineering and Professor of Engineering Leadership (2011-)

ALLEN HOFFMAN
Russell M. Searle Instructorship in Mechanical Engineering (2012-2013)

FRANK HOY
Paul Beswick Professorship of Innovation and Entrepreneurship (2009-)

GEORGE A. KAMINSKI
Leonard P. Kinnicutt Associate Professor (2009-2012)

YI H. MA
James H. Manning Professorship in Chemical Engineering (2004-)

RAJIB MALLICK
Ralph H. White Family Distinguished Professorship (2012-)

UMBERTO MOSCO
Harold J. Gay Professorship in Mathematics (2005-)

ROBERT L. NORTON
Milton Prince Higgins II Distinguished Professorship in Manufacturing

KAREN KASHMANIAN OATES
Peterson Family Professorship in Life Sciences and Biology (2010-)

TASKIN PADIR
Joseph Samuel Satin Distinguished Fellow in Electrical and Computer Engineering (2012-2013)

JEANINE D. PLUMMER
Alena and David M. Schwaber '65 Endowed Professorship in Environmental Engineering (2009-2014)

RYSZARD J. PRYPUTNIEWICZ
Kenneth G. Merriam Distinguished Professorship (2004-2007) (2007-2010) (2010-2013)

MARK RICE
Harry G. Stoddard Professorship in Management (2012-2017)

RICHARD D. SISSON
George F. Fuller Professorship in Mechanical Engineering (2004-2007) (2007-2010) (2010-2013)

JAMAL YAGOobi
George I. Alden Professorship in Engineering (2012-)

BOARD OF TRUSTEES' AWARD FOR OUTSTANDING SERVICE

1989 WILLIAM R. GROGAN

BOARD OF TRUSTEES' AWARD FOR OUTSTANDING CREATIVE SCHOLARSHIP

1981 KEVIN A. CLEMENTS

1982 AUDREY M. HARRIS

1983 LEONARD GOODWIN AND DAVID P. MC KAY

1984 ALVIN H. WEISS

1985 LEONARD B. SAND

1986 ALEXANDER E. EMANUEL

1987 MICHAEL W. KLEIN

1988 THOMAS A. SHANNON AND MICHAEL M. SOKAL

1989 ALLEN H. HOFFMAN

1990 PAUL W. DAVIS AND L. RAMDAS RAM-MOHAN

1991 RYSZARD J. PRYPUTNIEWICZ

1992 GEORGE D. J. PHILLIES

1993 WESLEY T. MOTT
 1994 YI H. MA
 1995 DONALD F. NELSON
 1996 DAVID CYGANSKI
 1996 ALBERT SACCO, JR.
 1996 CHRISTOPHER H. SOTAK
 1997 DAVID C. BROWN
 1998 KENT P. LJUNGQUIST
 1999 WILLIAM R. MOSER
 2000 PAMELA J. WEATHERS
 2001 BARBARA E. WYSLOUZIL
 2002 W. GRANT MCGIMPSEY
 2003 STEVEN C. BULLOCK
 2004 NIKOLAOS A. GATSONIS
 2005 HOMER F. WALKER
 2006 DIRAN APELIAN
 2007 ELKE A. RUNDENSTEINER
 2008 JOEL J. BRATTIN
 2009 ANTHONY G. DIXON
 2010 DALIN TANG
 2011 KAVEH PAHLAVAN
 2012 JOSÉ ARGÜELLO

BOARD OF TRUSTEES' AWARD FOR OUTSTANDING TEACHING

1968 WILBUR B. BRIDGMAN
 1969 WILLIAM R. GROGAN
 1970 JOHN P. VAN ALSTYNE
 1971 KENNETH E. SCOTT
 1972 ROBERT E. WAGNER
 1973 JAMES HENSEL
 1974 RAYMOND R. HAGGLUND
 1975 ROMEO L. MORUZZI
 1976 JOHN M. BOYD
 1977 FRANK D. DEFALCO
 1978 THOMAS H. KEIL
 1979 CARLTON W. STAPLES
 1980 ALLEN H. HOFFMAN
 1981 JAMES W. PAVLIK
 1982 ALEXANDER E. EMANUEL
 1983 HARTLEY T. GRANDIN, JR.

NOTICE OF NONDISCRIMINATORY POLICY AS TO STUDENTS

It is the policy of Worcester Polytechnic Institute that each qualified individual, regardless of race, color, sex, religion, sexual orientation, national origin, age as defined by law, or handicap, shall have equal opportunity in education, employment or services of Worcester Polytechnic Institute. It is the policy of WPI to follow U.S. federal government eligibility guidelines in the administration of its institutional financial aid program.

STUDENT RESPONSIBILITIES FOR ETHICAL AND PROFESSIONAL CONDUCT

WPI expects all its students to demonstrate the highest sense of honor in respecting academic and professional traditions such as acknowledging the borrowing or use of other people's ideas. Willful violations (like plagiarism) of such academic traditions or of legal restrictions (like those regarding copyright) will be considered violations of the "Campus Code" as described in the Student Planner.

WPI education is strongly committed to project-based learning, to providing students with access to state-of-the-art technology, and to working with professionals, on and off campus. Therefore, when students are exposed to proprietary and/or confidential information, they must accept responsibilities appropriate to their preparation for life-long careers in which codes of ethics govern professional conduct.

Facilities such as the off-campus projects, employment sites, and on-campus laboratories permit students to gain experience with techniques at the forefront of industrial and research development. With this access comes the added responsibility of safeguarding students of any agreements they sign regarding conditions or restrictions for access to certain equipment or information will also be considered a violation of the "Campus Code" as described in the Student Planner.

Record of any penalties assigned by the WPI Campus Judicial System which result from violation of standards of ethical conduct will become a permanent part of that student's disciplinary record.

STUDENT ABSENCE DUE TO RELIGIOUS BELIEFS

Section 2B, Chapter 151C of the General Laws of the Commonwealth of Massachusetts: "Any student in an educational or vocational training institution, other than a religious or denominational educational or vocational training institution, who is unable, because of his/her religious beliefs, to attend classes or to participate in any examination, study, or work requirement on a particular day shall be excused from any such examination or study or work requirement, and shall be provided with an opportunity to make up such examination, study, or work requirement which he/she may have missed because of such absence on any particular day; provided, however, that such makeup examination or work shall not create an unreasonable burden upon such school. No fees or any kind shall be charged by the institution for making available to the said student such opportunity. No adverse or prejudicial effects shall result to any students because of his/her availing himself/herself of the provisions of this section."

POLICY FOR INSTITUTIONAL CHARGES AND REFUNDS FOR STUDENTS CALLED TO MILITARY ACTION

WPI recognizes the obligations of our students who are called to active duty by the U.S. Military. To support these students WPI has established this policy to facilitate their transition from, and back to active student status.

Such students shall receive 100% refund for the uncompleted term(s) of the semester at the date of the notice. If such student has a loan obligation to WPI they will be granted an in-school deferment status during the period of active duty service, not to exceed a total of three years.

To initiate the process to be classified "On leave for military service" the student must indicate, in writing, that he/she is requesting school deferment status while being called to active duty. A copy of the official call to active duty notice from the military must be included with this request and be submitted to the Registrar's Office.

CURRENCY OF INFORMATION

The information contained in this Undergraduate Catalog is not a complete statement of all the policies, practices, rules and regulations of Worcester Polytechnic Institute. Any statement made in this publication is for current informational purposes only and is subject to change by the governing body of WPI or its duly authorized representatives. Certain policies, rules and regulations are not published in this publication but are promulgated directly by the appropriate department. Members of the WPI community are expected to abide by the current policies, practices, rules and regulations of the college, even

though they may not be contained in this publication or may not be consistent with the information contained in this publication, whether due to a properly authorized change or to a printing error.

Changes, deletions, and additions authorized by the governing body of WPI, after the printing of this catalog, are posted on WPI's web page at www.wpi.edu/ as a supplement to the undergraduate catalog, and includes the effective date of the action.

Worcester Polytechnic Institute is accredited by the New England Association of Schools and Colleges, Inc., through its Commission on Institutions of Higher Education.

Accreditation of an institution of higher education by the New England Association indicates that it meets or exceeds criteria for the assessment of institutional quality periodically applied through a peer review process. An accredited college or university is one which has available the necessary resources to achieve its stated purposes through appropriate educational programs, is substantially doing so, and gives reasonable evidence that it will continue to do so in the foreseeable future. Institutional integrity is also addressed through accreditation.

Accreditation by the New England Association is not partial but applies to the institution as a whole. As such, it is not a guarantee of every course or program offered, or the competence of individual graduates. Rather, it provides reasonable assurance about the quality of opportunities available to students who attend the institution.

Inquiries regarding the accreditation status by the New England Association should be directed to the Office of the Provost.

The aerospace engineering, biomedical engineering, chemical engineering, civil engineering, electrical and computer engineering, environmental engineering, industrial engineering,

manufacturing engineering and mechanical engineering programs are accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012 - telephone: (410) 347-7700.

The WPI Computer Science Program is accredited by the Computing Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012 - telephone: (410) 347-7700.

The Chemistry and Biochemistry Department and its program at WPI are approved by the American Chemical Society for a major in chemistry or biochemistry. Those chemistry majors who complete a program satisfying the guidelines established by the American Chemical Society are certified to that organization as having received an undergraduate professional education in chemistry or biochemistry.

The undergraduate and graduate business offerings in the School of Business are accredited by AACSB International, the Association to Advance Collegiate Schools of Business. AACSB International is a not-for-profit organization consisting of more than 900 educational organizations and corporations. Its mission is excellence in management education in colleges and universities. Headquartered in Tampa, Florida, AACSB International is the premier accrediting agency and service organization for business schools.

DIRECTIONS

DRIVING TO WPI

FROM THE EAST:

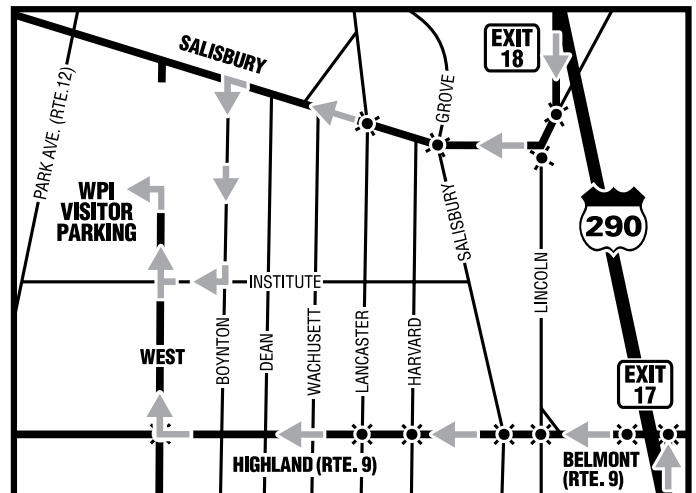

Take Mass. Turnpike (I-90) to Exit 11A (I-495). Proceed north to I-290, then west into Worcester. Take Exit 18, turn right at end of ramp, then an immediate right before next traffic light. At next light, proceed straight through, bearing to the right on Salisbury St. At the WPI sign, turn left onto Boynton St., then right onto Institute Rd., then right onto West St. Visitor parking is on the left after footbridge.

FROM THE NORTH:

Take I-495 south to I-290. Follow directions as from east.

FROM THE SOUTH AND WEST:

Take Mass. Turnpike (I-90) to Exit 10 (Auburn). Proceed east on I-290 into Worcester. Take Exit 17, turn left at end of ramp, follow Rte. 9 west through Lincoln Sq., straight onto Highland St., then right at light onto West St. and through first intersection. Visitor parking is on the left after footbridge.
