

A few words of advice:

1) Seven-week terms go by very fast. Push hard in your studies, prepare in advance and stay ahead of the game, seek help sooner rather than later, and keep pace with due dates.

2) If you are having trouble with a concept or homework problem, seek help sooner rather than later. Avoid wasting a lot of time spinning your wheels. Be efficient with your time, work smart not hard.

3) Anyone can learn physics, it takes two things: perseverance and attention to detail.

- Perseverance: devote yourself to your studies, there is no substitute for time spent working physics problems.
- Attention to detail: read problem statements very carefully, always draw a diagram, keep track of pluses and minuses, avoid doing steps in your head; do them on paper instead.

4) What is a physics exam?

What is a physics exam?

Four physics problems.

How can you do well on a physics exam?

Learn how to solve physics problems.

How do you learn how to solve physics problems?

Practice, work a lot of physics problems.

Then work them again.

Repetition is good.
