

QUEST NS Sustainable Transportation Collaboration

Halifax, Nova Scotia

Stantec was recently engaged by QUEST Nova Scotia to facilitate a workshop on sustainable transportation in the province, co-sponsored by the Nova Scotia Department of Environment Climate Change Directorate.

QUEST (Quality Urban Energy Systems for Tomorrow) is a national initiative that brings together representatives from industry, civil society, and government to develop integrated, community-based approaches to energy and green house gas emissions reduction. As part of this mission, QUEST NS was seeking to build a coalition of local stakeholders from government, advocacy groups, business and academia around sustainable transportation.

Stantec staff facilitated and actively contributed to the participatory workshop to brainstorm ideas and identify the most promising suggestions for further refinement into proposals for funding from QUEST. Stantec is part of the core QUEST advisory group and provides ongoing support and ideas for QUEST's work around sustainable transportation in Nova Scotia.
