
CE 591 Environmental Engineering Seminar

How to Make Your Office Sustainable

Description:

Sustainability should start with your office operations. Ken Page will present an approach to a business-oriented sustainability initiative based upon the program he has led for his company. The planning, goal setting, implementation and monitoring programs will be discussed as well as the achievements since the program was initiated.

Class attendees will be tasked with developing a sustainability plan for their business, their Degree Department, or their Home environment.

Who Should Attend

Graduate students registered for CE591 (All Disciplines), outside professionals seeking information and PDU credit, and the general public with interest in how engineers are meeting the challenge of sustainable design.

Format of Course

6:30 p.m. – 7: 30 p.m. *Lecture and Q/A Session*

7:30 p.m. – 8:30 p.m. *Class Project* – students work individually or in groups on in-class assignment

8:30 p.m.-9:30 p.m. *Review* previous week assignment and provide current week assignment

Date, Location and CRN

April 9, 2009

Salisbury Lab – RM 305 WPI Campus

Registration Information

Professional Development Registration:

\$50 *Lecture Only* CRN 27974 CESUS11

\$150 *Lecture and Class Project* CRN 27988

CESUS11 -- 2 Hrs PDH's Awarded

Graduate Course Registration:

CRN 27162 – 3 Credits Awarded

About the Speaker

Kenneth Page, P.E., BCEE, is Senior Vice President at CDM, where he directs the health and safety program, the internal sustainability initiative, and the office leader program. He also works with the executive management team on incentive compensation and project management.

Ken's day-to-day work is focused on firmwide business operations, working with senior leadership to implement strategies for continued growth, technical innovation, and exceptional client service.

Although it seems uncommon these days to spend an entire career with one firm, Ken has found continual challenges and rewards in his 40 years with CDM.

He began his career as a draftsman in 1968, and has witnessed the engineering profession progress from drafting tables and slide rules to 4-D computer-aided design and powerful computer modeling tools.

Ken's personal progression included advancing in engineering, project management, client management, and corporate governance and business management.

On the technical side, He has had the opportunity to manage complex water, wastewater, and flood control projects throughout the Northeast, and to this day I stay involved with some long-term clients.

On the business side, Ken has championed strategic initiatives, corporate health and safety, sustainability, and firmwide change management.
