

Take Me to Your Leader:

How gene architecture may impact translational efficiency during stress

BB 3527 Molecular Biology and Genetic Engineering Posters
Monday, Dec. 11 from 10-11:30am in Gateway Lobby

The students of Molecular Biology + Genetic Engineering: Approaches + Applications are contributing to the research mission of Prof. Scarlet Shell's laboratory; the goal is to discover how gene expression is regulated in mycobacteria. This understanding of how *M. smegmatis* responds to stress may inform strategies that better fight the bacterium responsible for tuberculosis.
