Pallyt is a 3-team MQP made of students studying in the areas of business, construction, engineering, operations, and software development.

Their goal is to innovate in the construction industry with a new material acquisition app that will allow homeowners and construction professionals to order supplies from their local hardware stores and specialty suppliers. These orders would be prepared for in-store pickup or delivered directly to the customer by a network of gig-economy drivers.

As they progress through their MQP, the team looks to establish themselves as a business and launch the app in early 2022.

ASK

The Pallyt team would like to be connected with industry professionals who can assist with obtaining investments and partnering with stores.
