

STEM Lesson Activity: Siege Machines

Writing Activity

Now that you and your team members have completed the assembly and testing of your catapult or trebuchet, it's time to **write** about the activity in your math journal. Remember, communicating your solution is part of the Engineering Design Process.

Your writing prompt is: *Describe the catapult/trebuchet activity you just completed in Math II.*

Before you write in your journal you should take a few minutes to think about the assembly process, working with your team members, and the testing you performed (the activity with the buckets and clay balls). When you write in your journal make sure you keep in mind good writing skills: complete sentences, capitalization and punctuation and proper spelling.

I hope you enjoyed working on this project. We will use the catapults for an activity at Math Night in the Spring.
