Worcester Polytechnic Institute  
Department of Mathematical Sciences  
Professor: Stephan Sturm

MA 4237

Probabilistic Methods of 
Operations Research

Syllabus

1. Contact & office hours:

Stephan Sturm  
Stratton Hall 202C  
(508) 831-59 21
Tuesday, 10:00 a.m. - 10:50 a.m.  
Thursday, 3:00 - 3:50 p.m.
and upon request per calendly: https://calendly.com/ssturm-2
https://users.wpi.edu/~ssturm/

2. Lecture:  
Mon, Tue, Thu, Fri,  
9:00-9:50 a.m.,  
Washburn 323

3. Textbook (recommended):
Online available via WPI Gordon library
Other recommended books that will be referred to in class are

  Online available via WPI Gordon library
Additionally I have started to type up lecture notes and I am happy to provide what I have. That said, I do not expect that I will be able to have finished everything during this years class.

4. **Resources:**

- Homework problems will be posted on the course site on piazza, [https://canvas.wpi.edu/courses/26626](https://canvas.wpi.edu/courses/26626). Solutions to homework problems will not be published, but students who do not understand the problem after receiving the graded homework are *highly encouraged* to discuss it in instructor’s office hours.
- A discussion forum will be hosted on piazza, [https://piazza.com/class/kv6my83fuen70](https://piazza.com/class/kv6my83fuen70). The forum supports different formatting options, and in particular the inclusion of mathematical symbols via LaTeX. See [https://piazza.com/help/formatting.html](https://piazza.com/help/formatting.html) for the general formatting guidelines and [https://en.wikibooks.org/wiki/LaTeX/Mathematics#Symbols](https://en.wikibooks.org/wiki/LaTeX/Mathematics#Symbols) for a list of commands for specific symbols. While discussions (also about homework) are encouraged, please refrain from giving complete solutions of homework questions. Giving hints is okay, providing a solution is *dishonest* and will be treated as violation of the academic honesty policy, see 11. Instructors will endorse correct student answers and provide only answers if there is no student answer in reasonable time.
- Grades will be posted on Canvas, [https://canvas.wpi.edu/courses/26626](https://canvas.wpi.edu/courses/26626)

5. **Course description** as per course catalog:

This course develops probabilistic methods useful to planners and decision makers in such areas as strategic planning, service facilities design, and failure of complex systems. Topics covered include: decisions theory, inventory theory, queuing theory, reliability theory, and simulation. Recommended background: Probability theory at the level of MA 2621 or MA 2631. This course will be offered in 2021–22, and in alternating years thereafter.

6. **Preliminary course outline:**

*Topic 1:* Probability Theory: Review, Computational Perspective, and Simulation  
*Topic 2:* Markov Chains in Discrete Time  
*Topic 3:* Markov Chain Monte Carlo and Metropolis Algorithm  
*Topic 4:* Queuing Theory
7. **Homework**: There will be 5–6 homework sets in total. It will be given out when the topic has been covered in class, students will have usually one week for finishing the problem set. The problem sets will be posted on [https://canvas.wpi.edu/courses/26626](https://canvas.wpi.edu/courses/26626).

Guidelines:

- Late submission policy: One extensions of the deadline will be granted as long as they are requested per email at least 24 hours in advance. All other late homework (when submitted before the corrected homeworks of the other students are returned) will be graded with a reduction by 50% of the points.
- The homework submission has not only to contain the result, but carefully developed calculations and proofs that can actually be followed by a reader.
- Whereas the discussion of homework problems in (small) groups is not only okay but encouraged, the final write-up has to be done individually. Any copying of homework is a violation of the academic honesty policy (see below) and will be treated as such.
- Some homework problems will require (moderate) programming skills. Coding can be done in any higher programming language (while instructor will focus in class on python).

8. **Projects**: There will be three projects in total: A midterm and final project that explore the application of the course content to real-world data from the campus environment. An exploration project will familiarize you with material on probabilistic methods for OR beyond what is taught in the lectures. The midterm project is an individual project due on November 26. The exploration project is individual and due on December 8. The final project is a group project due on December 16.

9. **Programming Language**: We will use Python with Numpy for numerical implementation. The language can be downloaded at [https://www.continuum.io/downloads](https://www.continuum.io/downloads). An introductory crash course can be organized if requested by students.

10. **Grading**: The total score will be composed from the individual scores by using the following weighting:

    - 25% Problem sets — lowest result will be dropped
    - 20% Midterm project
    - 30% Final project
    - 25% Exploration project
The achievement of the following total score will be sufficient for the stated letter grades:

- A 85%
- B 75%
- C 60%

11. **Students with Accessibility Needs**: Students with approved academic accommodations should plan to submit their accommodation letters through the Office of Accessibility Services Student Portal. Should you have any questions about how accommodations can be implemented in this particular course, please contact me as soon as possible. Students who are not currently registered with the Office of Accessibility Services (OAS) but who would like to find out more information regarding requesting accommodations and what that entails should plan to contact them via email: AccessibilityServices@wpi.edu and/or via phone: (508) 831-4908.

12. **Academic Honesty**: Each student is expected to familiarize him/herself with WPI’s Academic Honesty policies which can be found at [https://www.wpi.edu/about/policies/academic-integrity/dishonesty](https://www.wpi.edu/about/policies/academic-integrity/dishonesty). All acts of fabrication, plagiarism, cheating, and facilitation will be prosecuted according to the university’s policy. If you are ever unsure as to whether your intended actions are considered academically honest or not, please contact your instructor in advance. Further information is available via [https://www.wpi.edu/about/policies/academic-integrity](https://www.wpi.edu/about/policies/academic-integrity). Let me highlight in particular the definition of plagiarism:

*Plagiarism*: Using as one’s own the words, ideas, data, code, or other original academic material of another without providing proper citation or attribution. Plagiarism can apply to any assignment, including final or drafted copies. Examples include, but are not limited to:  
- Misrepresenting the work of another as one’s own,  
- Inaccurately or inadequately citing sources,  
- Paraphrasing (using the ideas of others in your own words) without citation.

13. **Further Resources**: Even the best of learners need help along the way. WPI has some great resources to support you in this class and beyond. Here are some to check out:

- Academic Resource Center, [https://arc.wpi.edu/](https://arc.wpi.edu/)
- IT Service & Support, [https://www.wpi.edu/offices/services-support](https://www.wpi.edu/offices/services-support)
- Student Development and Counseling Center, [https://www.wpi.edu/offices/student-development-counseling-center](https://www.wpi.edu/offices/student-development-counseling-center)
- Accessibility Services, [https://www.wpi.edu/offices/office-accessibility-services](https://www.wpi.edu/offices/office-accessibility-services)
- Health Services, [https://www.wpi.edu/student-experience/health-counseling/health-services](https://www.wpi.edu/student-experience/health-counseling/health-services)
